

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

THE Early English Text Society was started by Dr. Furnivall in 1864 for the purpose of bringing the mass of Old English Literature within the reach of the ordinary student, and of wiping away the reproach under which England had long rested, of having felt little interest in the monuments of her early language and life.

On the starting of the Society, so many Texts of importance were at once taken in hand by its Editors, that it became necessary in 1867 to open, besides the *Original Series* with which the Society began, an *Extra Series* which should be mainly devoted to fresh editions of all that is most valuable in printed MSS. and Caxton's and other black-letter books, though first editions of MSS. will not be excluded when the convenience of issuing them demands their inclusion in the Extra Series.

During the forty-one years of the Society's existence, it has produced, with whatever shortcomings, an amount of good solid work for which all students of our Language, and some of our Literature, must be grateful, and which has rendered possible the beginnings (at least) of proper Histories and Dictionaries of that Language and Literature, and has illustrated the thoughts, the life, the manners and customs of our forefathers and foremothers.

But the Society's experience has shown the very small number of those inheritors of the speech of Cynewulf, Chaucer, and Shakspeare who care two guineas a year for the records of that speech. "Let the dead past bury its dead," is still the cry of Great Britain and her Colonies, and of America, in the matter of language. The Society has never had money enough to produce the Texts that could easily have been got ready for it; and many Editors are now anxious to send to press the work they have prepared. The necessity has therefore arisen for trying to increase the number of the Society's members, and to induce its well-wishers to help it by gifts of money, either in one sum or by instalments. The Committee trust that every member will bring before his or her friends and acquaintances the Society's claims for liberal support. Until all Early English MSS. are printed, no proper History of our Language or Social Life is possible.

The Subscription to the Society, which constitutes membership, is £1 1s. a year for the ORIGINAL SERIES, and £1 1s. for the EXTRA SERIES, due in advance on the 1st of JANUARY, and should be paid by Cheque, Postal Order, or Money-Order, crossed "Union of London and Smith's Bank," to the Hon. Secretary, W. A. DALZIEL, Esq., 67, Victoria Road, Finsbury Park, London, N. Members who want their Texts posted to them, must add to their prepaid Subscriptions 1s. for the Original Series, and 1s. for the Extra Series, yearly. The Society's Texts are also sold separately at the prices put after them in the Lists; but Members can get back Texts at one-third less than the List prices by sending the cash for them in advance to the Hon. Secretary.

CORRIGENDA AND ADDENDA.

In Part I.

- pp. 270-297. In addition to the arguments there adduced to shew that the ancient sound of long *i* was (i) or (ii), and not (ei, ai, ei), Mr. James A. H. Murray has communicated to me some striking proofs from the Gaelic forms of English words and names, and English forms of Gaelic names, which will be given in Part IV.
- p. 302, l. 14, *blue* is erroneously treated as a French word, but in the ALPHABETICAL LIST on the same page it is correctly given as anglosaxon. The corrections which this oversight renders necessary will be given in Part IV., in the shape of a cancel for this page, which could not be prepared in time for this Part.

In Part II.

- p. 442, *Paternoster*, col. 2, vv. 4 and 8, for *don*, *miis'doon* read *doon*, *mis'doon*.
- p. 443, *Credo* 1, col. 2, ll. 4 and 7, for *lav'erd*, *ded*, read *laa'verd*, *deed*; *Credo* 2, col. 2, line 4, for *lov'erd* read *loo'verd*.
- p. 462, *verses*, l. 2, for *Richard* read *Richard*.
- pp. 464-5. On the use of *f* for *þ*, and the possibility of; having been occasionally confused with (s) in speech, Mr. W. W. Skeat calls attention to the remarks of Sir F. Madden, in his edition of *Lajamon*, 3, 437.
- p. 468, *Translation*, col. 2, l. 4, for *hil* read *hill*.
- p. 473, note, col. 2, l. 1, for 446 read 447; l. 17, for (mee, dee, swee, pee) read (mee, dee, swee, pee); l. 18, for *may* read *May*; l. 24-5 for (eintmynt) read (eintment).
- p. 503, l. 8, *pronunciation*, for *dead-liitsh* read *dead-liitshe*.
- p. 540, l. 6, for *hafði* read *hafði*.
- p. 549, l. 5 from bottom of text, for *mansaugur* (*maan'sœoi-jar*), read *man-saugur* (*maan'sœoiq-gar*).
- p. 550, Mr. H. Sweet has communicated to me the sounds of Icelandic letters as noted by Mr. Melville Bell from the pronunciation of Mr. Hjaltalin, which will be given in Part IV.
- p. 553, verse 30, col. 1, l. 4, for *alíkálfi* read *alíkálfi*; col. 2, l. 4, for *aa-li-kaaul-vi* read *aa-li-kaaul-vi*.
- p. 559, in the *Haustlång*; l. 1, for *er* read *es*, l. 2, for *er* read *es*; l. 4, for *bauge* read *baugi*; l. 5, for *Hel'lesbror* . . . *bauge* read *Hel'lesbror* . . . *bauge*; line 7, for *isarnleiki* read *isarnleiki*.
- p. 560, note 1, l. 2, for *lóngr* read *lángur*.
- p. 599, col. 2, l. 14, for *demesne* read *demesne*.
- p. 600, col. 1, l. 6, for *Eugene* read *Eugene*.
- p. 614, Glossotype as a system of writing is superseded by Glossic, explained in the appendix to the notice prefixed to Part III.
- p. 617, col. 2, under *n*, l. 4, for *lpand* read *pland*.

In Part III.

- p. 639, note 2 for (*spii'sulí*, *spes'ulí*) read (*spii'shulí*, *spesh'ulí*).
- p. 651. The numbers in the Table on this page are corrected on p. 725.
- p. 653, note 1. The memoir on Pennsylvania German by Prof. S. S. Haldeman, was read before the Philological Society on 3 June, 1870, and will be published separately; Dr. Mombert, having gone to Europe, has not furnished any additions to that memoir, which is rich in philological interest.
- p. 680 to p. 725. Some trifling errors in printing the Critical Text and Pronunciation of Chaucer's Prologue are corrected on p. 724, note.
- p. 754, note 1, for (*abitee'shun*) read (*abitaas'iun*).
- p. 789, col. 1, the reference after *tamat* should be 759^a.
- p. 791, col. 2, under *much good do it you*, for *mychyoditio* read *mychgoditio*; and to the references add, p. 938, note 1.
- pp. 919-996. All the references to the Globe Shakspeare relate to the issue of 1864, with which text every one has been verified at press. For later issues, the number of the page (and page only) here given, when it exceeds 1000, must be diminished by 3, thus VA 8 (1003), must be read as VA 8 (1000), and PT 42 (1057), must be read as PT 42 (1054). The cause of this difference is that pages 1000, 1001, 1002, in the issue of 1864, containing only the single word *Poems*, have been cancelled in subsequent issues.

NOTICE.

Indisposition, arising from overwork, has greatly delayed the appearance of this third part of my work, and a recent relapse, rendering the revision of the last seventy pages and the preparation of this notice extremely difficult, has compelled me to postpone to the next part the illustrations for the xviith and xviiith centuries, which were announced to be included in the present. Three years or more will probably elapse before the remainder of the book can be published.

The fourth and concluding part of this treatise is intended to consist of four chapters, two of which, devoted to the xviith and xviiith centuries respectively, are now completely ready for press, and will therefore certainly appear either under my own or some other superintendence. In chapter XI., I am desirous of giving some account of Existing Varieties of English Pronunciation, dialectic, antiquated, American, colonial, and vulgar, for the purpose of illustrating the results of the preceding investigation. This cannot be properly accomplished without the extensive co-operation of persons familiar with each individual dialect and form of speech. I invite all those into whose hands these pages may fall to give me their assistance, or procure me the assistance of others, in collecting materials for this novel and interesting research, which promises to be of great philological value, if properly executed. Many hundred communications are desirable. There cannot be too many, even from the same district, for the purpose of comparison and control. As I hope to commence this examination early in 1872, it will be an additional favour if the communications are sent as soon as possible, and not later than the close of 1871. They should be written on small-sized paper, not larger than one of these pages, and *only on one side*, leaving a margin of about an inch at the top for reference notes, with the lines wide apart for insertions, and all the phonetic part written in characters which cannot be misread. Correspondents would much add to the value of their communications by giving their full names and addresses, and stating the opportunities they have had for collecting the information sent. For the purpose of writing all English dialects in one alphabet on an English basis, I have improved the Glossotype of Chapter VI., and append its new form under the name of *Glossic*, with specimens which will shew the reader how to employ it, (pp. xiii-xx.) For the sake of uniformity and general intelligibility, I should feel obliged if those who favour me with communications on this subject would represent all peculiarities of pronunciation in the Glossic characters only, without any addition or alteration whatever. The little arrangements here suggested will, if carried

out, save an immense amount of labour in making use of any communications.

The following table will shew the kind of work wanted. All the varieties of sound there named are known to exist at present, and there are probably many more. It is wished to *localize them accurately*, for the purpose of understanding the unmixed dialectic English of the *xii*th and *xiii*th centuries, and to find traces of the pronunciations prevalent in the more mixed forms of the *xiv*th, *xv*th, and *xvii*th centuries. Many of the latter will be found in Ireland and America, and in the 'vulgar' English everywhere. No pronunciation should be recorded which has not been actually heard from some speaker who uses it naturally and habitually. The older peasantry and children who have not been at school preserve the dialectic sounds most purely. But the present facilities of communication are rapidly destroying all traces of our older dialectic English. Market women, who attend large towns, have generally a mixed style of speech. The daughters of peasants and small farmers, on becoming domestic servants, learn a new language, and corrupt the genuine Doric of their parents. Peasants do not speak naturally to strangers. The ear must also have been long familiar with a dialectic utterance to appreciate it thoroughly, and, in order to compare that utterance with the Southern, and render it correctly into Glossic, long familiarity with the educated London speech is also necessary. Resident Clergymen, Nonconformist Ministers, National and British Schoolmasters, and Country Gentlemen with literary tastes, are in the best position to give the required information, and to these, including all members of the three Societies for whom this work has been prepared, I especially appeal. But the number of persons more or less interested in our language, who have opportunities of observing, is so great, that scarcely any one who reads these lines will be unable to furnish at least a few observations, and it should be borne in mind that even one or two casual remarks lose their isolated character and acquire a new value when forwarded for comparison with many others. It is very desirable to determine the systems of pronunciation prevalent in the Northern, West and East and Central Midland, South Western, South Eastern, and purely Eastern dialects. The Salopian, Lincolnshire, and Kent Dialects are peculiarly interesting. Mr. James A. H. Murray's learned and interesting work on *Lowland Scotch* (London, Asher, 1871) will shew what is really wanted for each of our dialectic systems.

In the following, unfortunately very imperfect, Table a few suggestive words are added to each combination of letters, and the presumed varieties of pronunciation are indicated both in Glossic and Palaeotype, but only in reference to the particular combinations of letters which head the paragraph. The symbols placed after the sign =, shew the various sounds which that combination of letters is known to have in some one or other of the exemplificative words, in some locality or other where English is the native language of the speaker. In giving information, however, the whole

word should be written in Glossic, as considerable doubt may attach to local pronunciations of the other letters, and the name of the locality, and of the class of speakers, should be annexed. The quantity of the vowel and place of the accent should be given in every word, according to one of the two systems explained in the Key to Universal Glossic, p. xvi, and exhibited on pp. xix and xx. In writing single words, the accentual system, used on p. xx, is preferable. Great attention should be paid to the analysis of diphthongs, and the Glossic *ei*, *oi*, *ou*, *eu*, should only be employed where the writer, being unable to analyse the sound accurately, confines himself to marking vaguely the class to which it belongs. The trilled *r* when occurring without a vowel following should always be carefully marked, and the untrilled *r* should never be marked unless it is distinctly heard. Each new word, or item of information, should commence on a new line. Thus:

cord *kaa'd* or *káad* Bath, workmen, petty traders, etc.

card *ka'd* or *kád* Bath, as before.

beacon *bai'kn* or *báikn* Bath, as before.

key *kai'* or *kái* Bath, as before.

fair *feir* or *fay'er fáy'er fáy'u'* Bath, country farming man.

Note also the vowel in unaccented prefixes, such as those separated by a hyphen in the following words : a-mong a-stride a-las, ab-use, a-vert, ad-vance, ad-apt ad-mire ac-cept af-fix' an-nounce ap-pend, a-l-ert', al-cove a-byss, auth-entic, be-set be-gin, bin-ocular, con-ceal con-cur con-tract' con-trol, de-pend de-spite de-bate de-stroy de-feat, de-fer', dia-meter, di-rect dis-cuss, e-lope, en-close in-close, ex-cept e-vent e-mit ec-lipse, for-bid, fore-tell, gain-say, mis-deed mis-guide, ob-ject' ob-lige oc-casion op-pose, per-vert, pre-cede pre-fer', pro-mote pro-duce' pro-pose, pur-sue, re-pose, sub-ject' suf-fice, sur-vey sur-pass, sus-pend, to-morrow to-gether, trans-fer trans-scribe, un-fit, un-lil.

Position of Accent.

Mark any words in which unusual, peculiar, or variable positions of accent have been observed, as : illus'trate il'lustrate, demon'strate dem'onstrate, applic'able applic'able, des'picable des'picable, as'pect aspect', or'deal (two syllables) ord'e'al (three syllables), etc.

Words.

Names of numerals 1, 2, by units to 20, and by tens to 100, with thousand and million. Peculiar names of numbers as : pair, couple, leash, half dozen, dozen, long dozen, gross, long gross, half score, score, long score, long hundred, etc., with interpretation. Peculiar

methods of counting peculiar classes of objects. Ordinals, first, second, etc., to twentieth, thirtieth, etc., to hundredth, then thousandth and millionth. Numeral adverbs : once, twice, thrice, four times, some times, many times, often, seldom, never, etc., Single, simple, double, treble, quadruple, etc., fourfold, mani-fold, etc., three-some, etc. Each, either, neither, both, some, several, any, many, enough, enow, every. Names of peculiar weights and measures or quantities of any kind by which particular kinds of goods are bought and sold or hired, with their equivalents in imperial weights and measures. Names of division of time : minute, hour, day, night, week, days of week, sevennight, fortnight, month, names of months, quarter, half-quarter, half, twelvemonth, year, century, age, etc., Christmas, Michaelmas, Martinmas, Candlemas, Lammas, Lady Day, Midsummer, yule, any special festivals or days of settlement. Peculiar syntax and idioms : I are, we is, thee loves, thou beest, thou ist, he do, they does, I see it=saw it, etc.

Negative and other contracted forms : don't doesn't aint aren't ha'n't isn't wouldn't couldn't shouldn't musn't can't canna won't wunna dinna didn't, etc., I'm thou'rt he's we're you're I've I'd I'd I'll, etc.

Sentences.

The above illustrated in connected forms, accented and unaccented, by short sentences, introducing the commonest verbs : take, do, pray, beg, stand, lie down, come, think, find, love, believe, shew, stop, sew, sow, must, ought, to

use, need, lay, please, suffer, live, to lead, doubt, eat, drink, taste, mean, care, etc., and the nouns and verbs relating to: bodily parts, food, clothing, shelter, family and social relations, agriculture and manufacture, processes and implements, domestic animals, birds, fish, house vermin, heavenly bodies, weather, etc.

Sentences constructed like those of French, German, and Teviotdale in Glossic, p. xix, to accumulate all the peculiarities of dialectic utterances in a district.

Every peculiar sentence and word should be written fully in Glossic, and have its interpretation in ordinary language and spelling, as literal as possible, and peculiar constructions should be explained.

Comparative Specimen.

In order to compare different dialects, it is advisable to have one passage written in the idiom and pronunciation of all. Passages from the Bible are highly objectionable. Our next most familiar book is, perhaps, Shakspeare. The following extracts from the *Two Gentlemen of Verona*, act 3, sc. 1, sp. 69-133, have been selected for their rustic tone, several portions having been omitted as inappropriate or for brevity. Translations into the proper words, idiom, and pronunciation of every English dialect would be very valuable.

The Milkmaid, her Virtues and Vices.

Launce. He lives not now that knows me to be in love. Yet I am in love. But a team of horse shall not pluck that from me, nor who 'tis I love—and yet 'tis a woman. But what woman, I will not tell myself—and yet 'tis a milkmaid. Here is a cate-log of her condition. 'Imprimis: She can fetch and carry.' Why a horse can do no more; nay, a horse cannot fetch, but only carry; therefore is she better than a jade. 'Item: She can milk;' look you, a sweet virtue in a maid with clean hands.

[Enter Speed.]

Speed. How now! what news in your paper?

Launce. The blackest news that ever thou heardest.

Speed. Why, man, how black?

Launce. Why, as black as ink.

Speed. Let me read them.

Launce. Fie on thee, jolt-head! thou canst not read.

Speed. Thou liest; I can. Come, fool, come; try me in thy paper.

Launce. There; and Saint Nicholas be thy speed!

Speed. [reads] 'Imprimis: she can milk.'

Launce. Ay, that she can.

Speed. 'Item: she brews good ale.'

Launce. And thereof comes the proverb: 'Blessing of your heart, you brew good ale.'

Speed. 'Item: she can sew.'

Launce. That's as much as to say, Can she so?

Speed. 'Item: She can wash and scour.'

Launce. A special virtue; for then she need not be washed and scoured.

Speed. 'Item: she can spin.'

Launce. Then may I set the world on wheels, when she can spin for her living.

Speed. 'Here follow her vices.'

Launce. Close at the heels of her virtues.

Speed. 'Item: she doth talk in her sleep.'

Launce. It's no matter for that, so she sleep not in her talk.

Speed. 'Item: she is slow in words.'

Launce. O villain, that set down among her vices! To be slow in words is a woman's only virtue: I pray thee, out with't, and place it for her chief virtue.

Speed. 'Item: she is proud.'

Launce. Out with that too; it was Eve's legacy, and cannot be ta'en from her.

Speed. 'Item: she will often praise her liquor.'

Launce. If her liquor be good, she shall; if she will not, I will; for good things should be praised.

Speed. 'Item: she hath more hair than wit, and more faults than hairs, and more wealth than faults.'

Launce. Stop there; I'll have her; she was mine, and not mine, twice or thrice in that last article. Rehearse that once more.

Speed. 'Item: She hath more hair than wit.'

Launce. More hair than wit? It may be; I'll prove it. The cover of the salt hides the salt, and therefore it is more than the salt: the hair that covers the wit is more than the wit, for the greater hides the less. What's next?

Speed. 'And more faults than hairs.'
Launce. That's monstrous: O, that
 that were out!

Speed. 'And more wealth than faults.'
Launce. Why, that word makes the
 faults gracious. Well, I'll have her:
 and if it be a match, as nothing is im-
 possible,—

Speed. What then?

Launce. Why, then will I tell thee
 —that thy master stays for thee at the
 North-gate.

Speed. For me?

Launce. For thee! ay, who art thou?

he hath stayed for a better man than
 thee.

Speed. And must I go to him?

Launce. Thou must run to him, for
 thou hast stayed so long, that going will
 scarce serve the turn.

Speed. Why didst thou not tell me
 sooner? pox of your love-letters!

[*Exit.*

Launce. Now will he be swinged
 for reading my letter—an unmannerly
 slave, that will thrust himself into
 secrets! I'll after, to rejoice in the
 boy's correction. [*Exit.*

Of course it would be impossible to enter upon the subject at great length in Chapter XI. The results will have to be given almost in a tabular form. But it is highly desirable that a complete account of our existing English language should occupy the attention of an ENGLISH DIALECT SOCIETY, and I solicit all correspondents to favour me with their views on this subject, and to state whether they would be willing to join such a body. At the same time I must request permission, owing to the necessity of mental repose on this subject, to abstain from more than simply acknowledging the receipt of their communications during 1871.

In Chap. XII. I hope to consider the various important papers which have recently appeared, bearing upon the present investigations, especially those by Dr. Weymouth, Mr. Payne, Mr. Murray, Mr. Furnivall, and Herr Ten Brink, together with such criticisms on my work as may have appeared before that chapter is printed. Any reader who can point out apparent errors and doubtful conclusions, or who can draw my attention to any points requiring revision, or supply omissions, or indicate sources of information which have been overlooked, will confer a great favour upon me by communicating their observations or criticisms within the year 1871, written in the manner already suggested. The object of these considerations, as of my whole work, is, not to establish a theory, but to approximate as closely as possible to a recovery of Early English Pronunciation.

Those who have read any portion of my book will feel assured that no kind assistance that may thus be given to me will be left unacknowledged when published. And as the work is not one for private profit, but an entirely gratuitous contribution to the history of our language, produced at great cost to the three Societies which have honoured me by undertaking its publication, I feel no hesitation in thus publicly requesting aid to make it more worthy of the generosity which has rendered its existence possible.

ALEXANDER J. ELLIS.

25, ARGYLL ROAD, KENSINGTON, LONDON, W.

13 February, 1871.

GLOSSIC,

A NEW SYSTEM OF SPELLING, INTENDED TO BE USED CONCURRENTLY WITH THE EXISTING ENGLISH ORTHOGRAPHY IN ORDER TO REMEDY SOME OF ITS DEFECTS, WITHOUT CHANGING ITS FORM, OR DETRACTING FROM ITS VALUE.

KEY TO ENGLISH GLOSSIC.

Read the large capital letters always in the senses they have in the following words, which are all in the usual spelling except the three underlined, meant for foot, then, rouge.

BEET	BAIT	BAA	CAUL	COAL	COOL
KNIT	NET	GNAIT	NOT	NUT	FUOT
	HEIGHT	FOIL	FOUL	FEUD	
	YEA	WAY	WHEY	HAY	
PRA	BEE	TOE	DOE	CHEST	JEST
FIE	VIE	THIN	<u>DHEN</u>	SEAL	ZEAL
				RUSH	<u>ROUZH</u>
EAR	R'ING	EARR'ING	LAY	MAY	NAY
				SING	

R is vocal when no vowel follows, and modifies the preceding vowel forming diphthongs, as in PEER, PAIR, BOAR, BOOR, HERB.

Use R for R' and RR for RR', when a vowel follows, except in elementary books, where r' is retained.

Separate *th*, *dh*, *sh*, *zh*, *ng* by a hyphen (-) when necessary.

Read a stress on the first syllable when not otherwise directed.

Mark stress by (') after a long vowel or *ei*, *oi*, *ou*, *eu*, and after the first consonant following a short vowel.

Mark emphasis by (˘) before a word.

Pronounce *el*, *em*, *en*, *er*, *ej*, *a*, obscurely, after the stress syllable.

When three or more letters come together of which the two *first* may form a digraph, read them as such.

Letters retain their usual names, and alphabetical arrangement.

Words in customary or NOMIC spelling occurring among GLOSSIC, and conversely, should be underlined with a wavy line ~~, and printed with spaist letters, or else in a different type.

BRIEF KEY TO THE VOWELS.

- A as in English *gnat*.
 A' (read *ai-huok*) fine southern English *ask*, between *aa* and *e*.
 AA as in English *baa*.
 AE usual provincial English *e*, French *é*, German *ä*.
 AH broad German *ah*, between *aa* & *au*.
 AI as in English *bait*, with no after-sound of *ee*.
 AO open Italian *o*, between *o* and *oa*.
 ao' closer sound of *ao*, not quite *oa*.
 AU as in English *caul*.
 au' closer sound of *au*, as *i* in Irish *sir*.
 E as in southern English *net*.
 E' modification of *e* by vocal *r* in *herb*.
 ea Russian *ѣ*, Polish *y*, variety of *ee*.
 EE as in English *beet*.
 EO close French *eu* in *peu*, *feu*.
 eo' opener sound of *eo*, not quite *oe*.
 I as in English *knit*.
 I' opener sound of *i*, not quite *e*, as *e* in English *houses*, Welsh *u*.
 o as in English *not*, opener than *au*.
 o' a closer sound of *o*.
 oa as in English *coal*, with no after-sound of *oo*.
 oa' closer sound of *oa*; *u* with lips rounded.
 OE open French *eu* in *veuf*, German *ö*.
 oe' opener sound of *oe*.
 oo as in English *cool*.
 u as in English *nut*.
 U' obscure *u*, as *o* in English *mention*.
 ua open provincial variety of *u*.
 ua' slightly closer *ua*.
 UE French *u*, German *ü*.
 ui provincial Ger. *ü*, nearly *ee*, Swed. *y*.
 uu' Swedish long *u*.

uo as in English *full*, *woman*, *book*.
 uo' Swedish long *o*.

UU usual provincial variety of *u*.
 uu' Gaelic sound of *ao* in *laogh*; try to pronounce *oo* with open lips.

SPECIAL RULES FOR VOWELS.

Ascertain carefully the received pronunciation of the first 12 key words on p. xiii, (avoiding the after-sounds of *ee* and *oo*, very commonly perceptible after *ai* and *oa*). Observe that the tip of the tongue is depressed and the middle or front of the tongue raised for all of them, except *u*; and that the lips are more or less rounded for *oo*, *uo*, *oa*, *au*, *o*. Observe that for *i*, *e*, *uo*, the parts of the mouth and throat behind the narrowest passage between the tongue and palate, are more widely opened than for *ee*, *ai*, *oo*.

Having *ee* quite clear and distinct, like the Italian, Spanish, French, and German *i* long, practise it before all the English consonants, making it as long and as short as possible, and when short remark the difference between *ee* and *i*, the French *fini*, and English *finny*. Then lengthen *i*, noticing the distinction between *leap lip*, *steal still*, *feet fit*, when the latter words are sung to a long note. Sustaining the sound first of *ee* and then of *i*, bring the lips together and open them alternately, observing the new sounds generated, which will be *ui* and *ue*. A proper appreciation of the vowels, primary *ee*, wide *i*, round *ui*, wide round *ue*, will render all the others easy.

Obtain *oo* quite clear and distinct, like Italian and German *u* long, French *ou* long. Pronounce it long and short before all the English consonants. Observe the distinction between *pool* and *pull*, the former having *oo*, the latter *uo*. The true short *oo* is heard in French *poule*. English *pull* and French *poule*, differ as English *finny* and French *fini*, by widening. Observe that the back of the tongue is decidedly raised as near to the soft palate for *oo*, *uo*, as the front was to the hard palate for *ee*, *i*; and that the lips are rounded. While continuing to pronounce *oo* or *uo*, open the lips without moving the tongue. This will be difficult to do voluntarily at first, and the lips should be mechanically opened by the fingers till the habit is obtained. The results are the peculiar indistinct sounds *uu'*

and *u'*, of which *u'* is one of our commonest obscure and unaccented sounds.

In uttering *ee*, *ai*, *ae*, the narrowing of the passage between the tongue and hard palate is made by the middle or front of the tongue, which is gradually more retracted. The *ai*, *ae*, are the French *é*, *è*, Italian *e chiuso* and *e aperto*. The last *ae* is very common, when short, in many English mouths. The widening of the opening at the back, converts *ee*, *ai*, *ae*, into *i*, *e*, *a*. Now *e* is much finer than *ae*, and replaces it in the South of England. Care must be taken not to confuse English *a* with *aa*. The true *a* seems almost peculiar to the Southern and Western, the refined Northern, and the Irish pronunciation of English. The exact boundaries of the illiterate *a* and *aa* have to be ascertained. Rounding the lips changes *ee*, *ai*, *ae*, into *ui*, *eo*, *eo'*, of which *eo* is very common. Rounding the lips also changes *i*, *e*, *a*, into *ue*, *oe*, *oe'*, of which *oe* is very common.

On uttering *oo*, *oa*, *au*, the back of the tongue descends lower and lower, till for *au* the tongue lies almost entirely in the lower jaw. The widening of these gives *uo*, *ao*, *o*. The distinction between *au*, *o*, is necessarily very slight; as is also that between *ao* and *o*. But *ao* is very common in our dialects, and is known as *o aperto* in Italy. The primary forms of *oo*, *oa*, *au*, produced by opening the lips, are the obscure *uu'*, *uu*, *ua*, of which *uu* is very common in the provinces, being a deeper, thicker, broader sound of *u*. But the wide sounds *uo*, *ao*, *o*, on opening the lips, produce *u'*, *aa*, *ah*. Here *aa* is the true Italian and Spanish *a*, and *ah* is the deeper sound, heard for long *a* in Scotland and Germany, often confused with the rounded form *au*.

Of the mixed vowels, the only important primary vowel is *u*, for which the tongue lies flat, half way between the upper and lower jaw. It is as colourless as possible. It usually replaces *uu* in unaccented syllables, and altogether replaces it in refined Southern speech. Its wide form *a'* is the modern French fine *a*, much used also for *aa* in the South of England. The rounded form *oa'* seems to replace *u* or *uu* in some dialects. The mixed sound resulting from attempting to utter *ah* and *a* together is *e'*, which Mr. Bell considers to be the true vowel in *herd*.

Distinctions to be carefully drawn in

writing dialects. EE and I. AI and E. AE and E. AA, AH and A. OA and AO. AO, AU and AH. OO and UO. UU and U. UI, UE and EEW, IW, YOO. UE and EO. OE and U.

QUANTITY OF VOWELS.

All vowels are to be read short, or medial, except otherwise marked.

The Stress (·) placed immediately after a vowel shews it to be long and accented, as *august*; placed immediately after a consonant, hyphen (-). gap (:), or stop (.), it shews that the preceding vowel is short and accented, as *august*, *aamao'*, *pa'pa'*.

The Holder (¨) placed immediately after a vowel or consonant shews it to be long, as *au'gust*, *needi'*; the Stress Holder (¨¨) shews that the consonant it follows, is held, the preceding vowel being short and accented, compare *hap'i*, *hap'¨i*, *hap'¨i*, *hap'¨i*; in theoretical writing only. Practically it is more convenient to double a held consonant, as *hap'i*, *hap'pi*, *hap'pi*.

Stop (.) subjoined to any letter indicates a caught-up, imperfect utterance, as *ka..*, *kat..* for *kat*; great abruptness is marked by (...)

Accent marks may also be used when preferred, being placed over the first letter of a combination, thus:

	Very long.	Long.	Medial.	Short.	Very short.
with stress— <i>aa'</i>	<i>āa</i>	<i>āa</i>	<i>āa</i>	<i>āa</i>	<i>āa</i>
without stress— <i>āa</i>	<i>āa</i>	<i>āa</i>	<i>āa</i>	<i>āa</i>	<i>āa</i>

If the first letter is a capital the accent marks may be placed on the second, as *August*, *August*, *kāazāa*.

SYSTEMATIC DIPHTHONGS.

The stressless element of a diphthong is systematically indicated by a preceding turned comma (') called *hook*, as *m'eeai'ee* It. miei, *Laa'ooraa* It. Laura, *p'aaoo'raa* It. paura, *l'ueee* Fr. lui. But when, as is almost always the case, this element is 'ee 'oo, or 'ue, it may be replaced by its related consonant *y*, *w* or *wo*, as *myaiy*, *Laawraa*, *l'wee*. Any obscure final element as 'u, 'e, 'e', is sufficiently expressed by the sign of simple voice *h'*, as provincial *neeh't* night, *streeh'm* stream *wih'kn* waken. In applying the rule for marking stress and quantity, treat the stressless element as a consonant.

The four English Glossic diphthongs EI, OI, OU, EU are unsystematic, and are variously pronounced, thus:

EI is *uy* in the South, sometimes *a'y*, *ayy*; and is often broadened to *uuy*, *ahy*, *au'y*, in the provinces.

OI is *oy* in the South, and becomes *auy*, provincially.

OU is *uw* in the South, sometimes *a'w*, *aaw*, and is often broadened to *uuo* *ahw*, *oaw*, *aow*; it becomes *oe,w* in Devonshire, and *aew* in Norfolk.

EU varies as *iw*, *eeu*, *yoo*, *yiw*, *yeeu*.

The Londoners often mispronounce AI as *ai'y*, *aiy*, *ey* or nearly *uy*, and OA as *oa'w*, *oaw*, *ow* or nearly *uw*.

English vocal R, is essentially the same as H', forming a diphthong with the preceding vowel. Thus English glossic *peer*, *pair*, *boar*, *boor*, *fer*, *difer-ring*, are systematic *pi'h'*, *pe'h'*, *ba'o'h'*, *bu'o'h'*, *fe'h'* or *fu'*, *dife'h'-ring* or *difu'ring*. But *r* is used where *r'*, or *rr'*, or *h'r'* may be occasionally heard.

CONSONANTS.

Differences from English Glossic consonants are marked by adding an *h* in the usual way, with *y'* for palatals, and *w'* for labials, by subjoining an apostrophe (') or by prefixing a turned comma (`,`), a turned apostrophe (`,`), or a simple comma (`,`).

Simple consonants, and added G.

Y, W, H; P, B, T, D, J, K, G, F, V, S, Z, vocal R, L, M, N, NG.

Added H.

WH, CH, TH, DH, SH, ZH.

KH, GH German *ch, g* in *Dach, Tage*; YH, R'H, LH, MH, NH, NGH are the hissed voiceless forms of *y, r', l, m, n, ng*.

Added Y' and YH.

TY', DY', KY', GY', LY', NY', NGY', are palatalised or *mouill * varieties of *t, d, k, g, l, n, ng*, as in *virtue, verdure*, old *cart*, old *guard*, Italian *gl, gn*, vulgar French, *il n'y a pas=ngy'aa pah*. LYH is the hissed voiceless form of LY'.

KYH, GYH are palatal varieties of KII, GH as in German *ich, fliege*.

Added W' and WH.

TW', DW', KW', GW', RW', R'W', LW', NW', &c., are labial varieties

of *t, d, k, g, r, r', l, n, &c.*, produced by rounding the lips at or during their utterance, French *toi, dois*, English *quiet, guano, our*, French *roi, loi, noix, &c.*

KWH, GWH are labial varieties of KH, GH as in German *auch, saugen*, and Scotch *guh*. HWH is a whistle.

Added apostrophe (') called "Hook."

H' called *aich-huok*, is the simplest emission of voice: H'W' is *h'* with rounded lips; H'WH a voiced whistle.

T', D', called *tee-huok, dee-huok*, dental *t, d*, with tip of tongue nearly between teeth as for *th, dh*.

F', V', called *ef-huok, vee-huok*, toothless *f, v*, the lip not touching the teeth; *v'* is true German *w*.

R', or R before vowels, is trilled *r*.

N' read *en-huok*, French nasal *n*, which nasalizes the preceding vowel. To Englishmen the four French words *vent, vont, vin, un* sound *von', voan', van', un'*; but Frenchmen take them as *vahn', voan', vaen', oen'*. Sanscrit *unuosvaa.ru*.

K', G' peculiar Picard varieties of *ky', gy'*, nearly approaching *ch, j*.

CH', J', TS', DZ' monophthongal Roman varieties of *ch, j, ts, dz*.

T'H, D'H lisped varieties of *s, z*, imitating *th, dh*; occasional Spanish *z, d*.

S' not after *t*, Sanscrit *visu,rgu*.

Prefixed comma (`,`), called "Comma."

,H read *koma-aich*, lax utterance, opposed to *H*.

,T, ,D read *koma-tee, koma-dee* peculiar Sardinian varieties of *t, d*, the tongue being much retracted.

,L Polish barred *l*, with ,LH its voiceless, ,LW' its labial, and ,LWH its voiceless labial forms.

; read *hamza*, check of the glottis.

Prefixed turned comma (`,`), called "Hook."

ˆ read *ein*, the Arabic *ʾaayn* or bleat.

ˆH, ˆT ˆD, ˆS ˆZ, ˆK, read *huok-aich, huok-tee, &c.*; peculiar Arabic varieties of *h, t, d, s, z, k*; ˆG the voiced form of ˆK.

ˆKH, ˆGH, called *huok-kai-aich, huok-jee-aich*; the Arabic *kh, gh* pronounced with a rattle of the uvula.

W, PR, BR, read *huok-dubl-eu*, &c.; lip trills, the first with tight and the others with loose lips; the first is the common English defective *w* for *r*, as *ve'wi t'woo*, the last is used for stopping horses in Germany.

R read *huok-aar*, the French *r grasseyé*, and Northumberland burr or *k'ruop* = 'gh; RH its voiceless form.

LH, L, read *huok-el-aich*, *huok-el*, Welsh *ll*, and its voiced Manx form.

F, V, read *huok-ef* &c.; *f*, *v* with back of tongue raised as for *oo*.

Prefixed turned apostrophe (') called "Curve."

AA, read *kerv-aa*, an *aa* pronounced through the nose, as in many parts of Germany and America, different from *aan*, and so for any vowel, 'h, or 'k.

T, D, SH, R, L, N read *kerv-tee* &c., Sanscrit "cerebral" *t, d, sh, r', l, n*; produced by turning the under part of the tongue to the roof of the mouth and attempting to utter *t, d, sh, r', l, n*.

H read *kerv-aich*, a post aspiration, consisting of the emphatic utterance of the following vowel, in one syllable with the consonant, or an emphatically added final aspirate after a consonant. Common in Irish-English, and Hindoostanee.

W is the consonant related to *ue*, as *w* is to *oo*.

Clicks,—spoken with suction stopped.

C, tongue in *t* position, English *tut*!

Q, tongue in *t* position.

X, tongue in *ty* position, but unilateral, that is, with the left edge clinging to the palate, and the right free, as in English clicking to a horse. C, q, x, are used in Appleyard's *Caffre*.

QC, tongue in *ty* position, but not unilateral; from Boyce's *Hottentot*.

KC, tongue retracted to the 'k position and clinging to the soft palate.

Whispers or Flats.

H, called *serkl-aich*, simple whisper; H' whisper and voice together

H' diphthongal form of 'h'.

AA, read *serkl-aa*, whispered *aa*, and so for all vowels.

B, DH, read *serkl-bee* etc., the sound of *b, d*, heard when whispering, as distinct from *p, t*, common in Saxony when initial, and sounding to

Englishmen like *p, t* when standing for *b, d*, and like *b, d* when standing for *p, t*. °G, whispered *g*, does not occur in Saxony.

V, °DH, °Z, °ZH, °L, °M, °N read *serkl-vee* etc., similar theoretical English varieties, final, or interposed between voiced and voiceless letters.

TONES.

The tones should be placed after the Chinese word or the English syllable to which they refer. They are here, for convenience, printed over or under the vowel *o*, but in writing and printing the vowel should be cut out.

ā, ȳ, high or low level tone, *p, hing*.

ō, ȳ, tone rising from high or low pitch, *shaang*.

ô, ȳ rise and fall, (that is, *foo-kyon shaang*), or fall and rise.

ò, ȳ falling tone to high or low pitch, *kyoo* or *k'ho*.

ȳ, ȳ sudden catch of the voice at a high or low pitch, *shoo*, *shee*, *nyip*, or *yaap*.

SIGNS.

Hyphen (-), used to separate combinations, as in *mis-hap*, *in-got*. In *whair-ewer*, *r* is vocal; *elm fauln* are monosyllables, *el-m*, *faul-n* are dissyllables; *fidler* has two syllables, *fid-er* three syllables.

Divider), occasionally used to assist the reader by separating to the eye, words not separated to the ear, as *tel'yer dhat'l doo*.

Omission (°), occasionally used to assist the reader by indicating the omission of some letters usually pronounced, as *hee)l doo)l*.

Gap (:) indicates an hiatus.

Closure (.) prefixed to any letter indicates a very emphatic utterance as *mei hei for my eye*.

Emphasis (') prefixed to a word, shews that the whole word is more emphatically uttered, as *ei neu dhat dhat dhat dhat man sed wez rong*; *ei gaw 'too thingz too 'too men*, and *'hee gaw 'too, 'too, too 'too, 'too*.

The following are subjoined to indicate, † emission, ‡ suction, § trill of the organs implicated, † inner and ‡ outer position of the organs implicated, † tongue protruded, § unilaterality, * linking of the two letters between which it stands to form a third sound, (extreme faintness.

CRITICAL TEXT OF PROLOGUE.

IN accordance with the intimation on p. 398, the Prologue to the Canterbury Tales is here given as an illustration of the conclusions arrived at in Chap. For this purpose the systematic orthography proposed on p. 401, became of importance. The value of exact diplomatic reprints of the MSS. on which we rely, cannot be overrated. But when we possess these, and endeavour to divine an original text whence they may have all arisen, we ought not to attempt to do so by the patchwork process of fitting together words taken from different MSS., each retaining the peculiar and often provincial orthography of the originals. The result of such a process could not but be more unlike what Chaucer wrote than any systematic orthography. Chaucer no doubt did not spell uniformly. It is very difficult to do so, as I can attest, after making the following attempt, and probably not succeeding. But a modern should not venture to vary his orthography according to his own feelings at the moment, as they would be almost sure to lead him astray. Whenever, therefore, a text is made out of other texts some sort of systematic orthography is inevitable, and hence, notwithstanding the vehe-

CHAPTER VII.

ILLUSTRATIONS OF THE PRONUNCIATION OF ENGLISH DURING
THE FOURTEENTH CENTURY.§ 1. *Chaucer.*

CRITICAL TEXT OF PROLOGUE.

IN accordance with the intimation on p. 398, the Prologue to the *Canterbury Tales* is here given as an illustration of the conclusions arrived at in Chap. IV., for the pronunciation of English in the xivth century. But it has been necessary to abandon the intention there expressed, of following the Harl. MS. 7334 as closely as possible, for since the passage referred to was printed, the Chaucer Society has issued its magnificent Six-Text Edition of the Prologue and Knight's Tale, and it was therefore necessary to study those MSS. with a view to arriving at a satisfactory text to pronounce, that is, one which satisfied the laws of grammar and the laws of metre better than the reading of any one single MS. which we possess. For this purpose the systematic orthography proposed on p. 401, became of importance. The value of exact diplomatic reprints of the MSS. on which we rely, cannot be overrated. But when we possess these, and endeavour to divine an original text whence they may have all arisen, we ought not to attempt to do so by the patchwork process of fitting together words taken from different MSS., each retaining the peculiar and often provincial orthography of the originals. The result of such a process could not but be more unlike what Chaucer wrote than any systematic orthography. Chaucer no doubt did not spell uniformly. It is very difficult to do so, as I can attest, after making the following attempt, and probably not succeeding. But a modern should not venture to vary his orthography according to his own feelings at the moment, as they would be almost sure to lead him astray. Whenever, therefore, a text is made out of other texts some sort of systematic orthography is inevitable, and hence, notwithstanding the vehemence

ment denunciation of the editor of the Six-Text Edition,¹ I have made trial of that one proposed on p. 401, in all its strictness. The result is on the whole, better than could have been expected. Notwithstanding the substantial agreement of the Harleian 7334, and the Six New Texts, there is just sufficient discrepancy to assist in removing almost every difficulty of language and metre, so far as the prologue is concerned, and to render conjecture almost unnecessary. The details are briefly given in the footnotes to the following composite text.

PRONUNCIATION OF LONG U AND OF AY, EY AS DEDUCED FROM A COMPARISON
OF THE ORTHOGRAPHIES OF SEVEN MANUSCRIPTS OF THE CANTERBURY
TALES.

The investigations in Chap. IV. for the determination of the pronunciation of the *xiv*th century, were avowedly founded upon the single MS. Harl. 7334 (*suprà* p. 244). Now that large portions of six other MSS. have been diplomatically printed, it is satisfactory to see that this determination is practically unaffected by the new orthographies introduced. The Cambridge and the Lansdowne MSS., indeed, present us at first sight with what appears to be great vagaries, but when we have once recognized these as being, not indeterminate spellings of southern sounds, but sufficiently determinate representations of provincial, northern, or west midland, utterances, mixed with some attempts to give southern pronunciation, they at once corroborate, instead of invalidating, the conclusions already obtained. That this is the proper view has been sufficiently shewn in the Temporary Preface to the Six-Text Edition, p. 51 and p. 62, and there is no need to discuss it further.

¹ Temporary Preface to the Six-Text Edition of Chaucer's *Canterbury Tales*, Part I., by *F. J. Furnivall*, pp. 113-115. A uniform system of spelling did not prevail in the *xiv*th century, and as we have seen, can scarcely be said to prevail in the *xix*th, but variations were not intentional, and the plan I advocate is, from the varied spellings which prevail, to discover the system aimed at, but missed, by the old writer, and adopt it. All varieties of grammar, dialect, and pronunciation, when belonging to the author, and not his scribe, who was often ignorant, and still oftener careless (p. 249), should be preserved, and autographs, such as *Ormin's* and *Dan Michel's*, must be followed implicitly and literatim. In such diplomatic printing, I even object to insertions between brackets. They destroy the appearance of the original, and hence throw the investigator into

the editor's track, and often stand in the way of an independent conjecture. At the same time they do not present the text as the editor would shew it, for the attention is distracted by the brackets. The plan pursued for the *Prisoner's Prayer*, *suprà* pp. 434-437, of giving the original and amended texts in parallel columns, is the only one which fully answers both purposes. Where this is not possible, it appears to me that the best course to pursue is to leave the text pure, and submit the correction in a note. This serves the purpose of the [] or *sic*, much more effectually than such disturbances of the text, which are only indispensable when notes are inconvenient. The division of words and capitals of the original should for the same reason be retained. See the *Temp. Pref.* p. 88.

These MSS. may be looked upon as authorities for the words, but not for the southern pronunciation of the words, and they shew their writers' own pronunciation by using letters in precisely the same sense as was assigned from the Harl. MS. on p. 398 above. Two points may be particularly noticed because they are both points of difference between Mr. Payne and myself, (*suprà* pp. 582, 583) and in one of them I seem to differ from many of those who have formed an opinion on the subject.

Long *u* after an examination of all the authorities I could find, was stated on p. 171 to have been (*yy*) during the *xvi*th century. There did not appear to be any ground for supposing it to be different in the *xv*th century, and hence it was assumed on p. 298 to have had that value at that time. This was strengthened by the proof that (*uu*), the only other sound which it could have represented, was written *ou*, p. 305. A further though a negative proof seems to be furnished by the fact that I have not observed any case of long *u* and *ou* rhyming together, or being substituted one for the other in the old or any one of the six newly published texts.¹ I cannot pretend to have carefully examined them for that purpose, but it is not likely that in my frequent references to them for other purposes, such a marked peculiarity should have escaped me. It has however been already pointed out that in the first half of the *xiii*th century (*uu*) was represented by *u*, and not by *ou*, and for about thirty years, including the end of the *xiii*th and beginning of the *xiv*th century, both signs were employed indiscriminately for (*uu*), and that this use of *ou* seemed to have arisen from a growing use of *u* as (*yy*), pp. 424, 470, 471 note 2, etc.² Hence the predominance of *ou* in the be-

¹ Compare *fortune*, *buke* in Hampole (*suprà* p. 410, n. 2). The two orthographies *boka*, *buke*, struggle with each other in Hampole. In the *Towneley Mysteries*, I have also observed the rhyme, *goode infude*, which however, may be simply a bad rhyme, the spelling is Northern and of the latter part of the *xv*th century. On examining the Harl. MS. 2253 for the rhymes: *bur mesaventur*, *bure coverture*, quoted from the Cam. MS. of King Horn on p. 480, I find that the first rhyme disappears. Thus v. 325, Lumby's edition of the Cam. MSS. has

Went ut of my bur
Wip muchel mefaventur
and the Harl. reads fo. 85,
Went out of my bourc,
shame þe mott byshoure;
and v. 649, the Cam. MS. has
heo ferde in to bure
to sen auenture,
and the Harl. has, fo. 87,
Horn ne pohte nout him on
ant to bourc wes ygon.

Judging however by the collation in F. Michel's edn. the Oxf. MS. agrees with the Cam. The text is clearly doubtful.

But v. 691, which in the Cam. MS. runs

he liþ in bure
under couerture
becomes in the Harl. fo. 87,
he byht nou in bourc,
vnder couertoure,

where the scribe by adopting the orthography *ou* has clearly committed himself to the pronunciation (*uu*) and not (*yy*). It would, however, not be safe to draw a general conclusion from these examples in evidently very untrustworthy texts, which have yet to be properly studied in connection with dialectic and individual pronunciation, *suprà* p. 481.

² On p. 301, note, col. 1, a few instances of the Devonshire substitutes for (*uu*) are given, on the authority of Mr. Shelly's pronunciation of Nathan Hogg's Letters. The new series of

ginning of the xivth century and the subsequent strict severance of long *u* and *ou*, which seem so far as I have observed, to have been never confused, as short *u* and *ou* certainly were (p. 304). The conclusion seems to be inevitable, that long *u* and *ou* represented different sounds, and that the long *u* must have had in the xivth, what Bullokar in the xvith century called its "olde and continu'd" sound, namely (yy). This, however, is directly opposed to Mr. Payne's opinions given on p. 583.

those letters there named, having an improved orthography, using *u*, *a*, for (y, æ),—not (a), as there misprinted,—has allowed me to make some collections of words, which are curious in connection with the very ancient western confusion of *u*, *e*, *i*, and the pronunciation of long *u* as (yy). It may be stated that the sound is not always exactly (yy). In various mouths, and even in the same mouth, it varies considerably, inclining towards (uu), through (uu[?]), or towards (æ) the labialised (ee). The short sound in *did* seemed truly (dɔd). But in *could*, *good*, I heard very distinctly (kyd, gyd) with a clear, but extremely short (y), from South Devon peasants in the neighbourhood of Totnes. Nor is the use of (yy) or (uu, æ) for (uu) due to any incapacity on the part of the speaker to say (uu). The same peasant who called *Combs*, (Kyymz) or (Kæmz), [it is difficult to say which, and apparently the sound was not determinate], and even echoed the name thus when put to him as (Kuumz), and called *brook* (bryk), with a very short (y), talked of (muur, stuunz, ruud) for *more*, *stones*, *road*. Mr. Murray, in his paper on the Scotch dialect in the *Philological Transactions*, has some interesting speculations on similar confusions in Scotch, and on the transition of (u) or (u) through (ə) into (ə) and finally (ɪ). On referring to pp. 160-3, *suprà*, the close connection of (uu, yy) will be seen to be due to the fact that both are labial, and that in both the tongue is raised, the back for (uu) and front for (yy). The passage from (uu) to (yy) may therefore be made almost imperceptibly, and if the front is slightly lowered, the result becomes (æ). The two sounds (yy, æ) are consequently greatly confused by speakers in Scotland, Norfolk, and Devonshire. Mr. Murray notes the resemblance between (ə, ə),—which indeed led to the similarity of their nota-

tion in palaeotype—as shewn by Mr. M. Bell's assigning (ə) and my giving (ə) to the French mute *e*, which others again make (əh). If then (u) travels through (y, ə) to (ə), its change to (ɪ) is almost imperceptible, and the slightest labialisation of the latter sound gives (o). Whatever be the reason, there can be no doubt of the fact that (u, y, ə, æ, ɪ, o) do interchange provincially *now*, and hence we must not be surprised at finding that they did so in ancient times, when the circumstances were only more favourable to varieties of speech. These observations will serve in some degree to explain the phenomena alluded to in the text, and also the following lists from Nathan Hogg's second series, in which I retain the orthography of the author (Mr. H. Baird), where we should read *u*, *a* as (y, æ) short or long, and other letters nearly as in glossotype.

EW and long U become (yy), as: *blu*, *buty*, *gruel*, *curyiss* *curious*, *cut*, *acute*, *duce* *deuce*, *duty*, *hu* *hue* *yew*, *humia* *human*, *kinklud* *conclude*, *muzic*, *nu* *new*, *pur* *pure*, *ruin'd*, *stu* *stew*, *stupid*, *tru*, *truth*, *tun*, *vlut* *flute*, *vu* *view* *few*, *vum* *fume*, *vutur* *future*, *yuz'd* *used*, *zuant* *suant*.

Long and short OO, OU, O, U, usually called (uu, u) become (yy, y) or (æ, ə), as: *balu* *hullahbaloo*, *blum* *bloom*, *bruk* *brook*, *buk* *book*, *chuz* *choose*, *crook* *crook*, *cud* *could*, *curt* *court*, *cus* *course* *coarse*, *dru* *through*, *drupin* *drooping*, *du* *do*, *gud* *good*, *gulden* *golden*, *intu*, *kushin* *cushion*, *luk* *look*, *lus'nd* *loosened*, *minuver* *manoeuvre*, *muv* *move*, *num* *noon*, *pul'd* *pulled*, *pruv* *prove*, *puk* *pook*, *rum* *room*, *shu* *shoe*, *shud* *should*, *skule* *school*, *stud* *stood*, *trupin* *trooping*, *tu* *too* *two* to [emphatic, unemphatic *ta*=(tə)], *tuk* *took*, *tum* *tomb*, *u* *who*, *vul* *full* *fool*, *vut* *foot*, *yu* *you*, *zmuthe* *smooth*, *zun* *soon*.

Short U, OO, O usually called (ə) become (ɪ), as: *blid* *blood*, *dist* *dōst*, *honjist*, *unjust*, *jist* *just* *adv.*, *rin* *run*

The second point is extremely difficult, and cannot be so cursorily dismissed. What was the sound attributed to *ai ay, ei ey* in Chaucer? The constant confusion of all four spellings shews that it was one and the same.¹ Here again the voice of the xvth century was all but unanimous for (ai), but there is one remarkable exception, Hart, who as early as 1551 (in his MS. cited below Chap. VIII, § 3, note 1), distinctly asserts the identity of the sounds of these combinations with that of *e, ea*, that is (ee). For printing this assertion in 1569 he was strictly called to order by Gill in 1621, *suprà* p. 122. All the other writers of the xvth century, especially Salesbury and Smith distinctly assert that (ai) was the sound. Hence on p. 263, (ai) was taken without hesitation to be the sound of *ay, ey*, in Chaucer. We are familiar with the change of (ai) into (ee), p. 238, and with the change of (ii) into (ai), p. 295, but the change of (ee) into (ai), although possible, and in actual living English progress (p. 454, n. 1), is not usual. There was no reason at all to suppose that *ay* could have been (ii), and little reason to suppose that it would have been (ee) before it became (ai). On examining the origin of *ay, ey*, in English words derived from ags. sources, the *y* or *i* appears as the relic of a former *g* = (gh, gh, *ȝ*) and then (i), which leads irresistibly to the notion of the diphthong (ai), p. 440, l. 14, p. 489. But it certainly does not always so arise, and we have seen in Orrmin (ib.) that the *ȝȝ* = (*ȝ*) was sometimes as pure an insertion as we occasionally find in romance words derived from the Latin,² and as we now find

[also to urn], rish'd *rushed*, tich'd *touched*, vli'd *flood*, wid'n *would not*, winder *wonder*, wisser *worser*, zich *such*, zin *sun son*, zmitch *smutch*.

Short E, I, usually called (e, i) are frequently replaced by (æ) or (æ), as: bevil *befell*, bul *bell*, bulch'd *belched*, burry'd *buried*, churish *cherish*, eszul *himself*, etszul *itself*, mezul *myself*, mulkin *milking*, muller *miller*, purish *perish*, shullins *shillings*, spul *spell*, spurrit *spirit* [common even in London, and compare *syrop, stirrup*], tuller *tell you*, turrabul *terrible*, ulbaw'd *elbowed*, vuller *fellow* [no *r* pronounced, final or pre-consonantal trilled (*r*) seems unknown in Devonshire], vullidge *village*, vulty *filthy*, vurrit *ferret*, vury *very*, vust *first*, wul *well*, wulvare *welfare*, yul *yell*, yur'd *heard*, zmul *smell*, zulf *self*.

The words *zup'd swept*, *indud indeed*, *dud did done*, *humman hummen woman women*, do not exactly belong to any of these categories.

The above lists, which, being only derived from one small book, are necessarily very incomplete, serve to shew the importance of modern dialectic study in the appreciation of ancient and therefore dialectic English (p. 581).

¹ Not in Scotch, where the spellings *ai, ei* seem to have been developed independently in the xvth century, for the Scotch long *a, e*, and perhaps meant (æ, æ), compare Sir T. Smith, *suprà* p. 121, l. 18. These spellings were accompanied by the similar forms *oi, ui, ou* for the long *o, u, ou*, perhaps = (ou, yu, uæ), though the first was not much used. We must recollect that in Scotch short *i* was not (i) or (i), but (e), and hence might easily be used for (æ) or (æ) into which unaccented (e) readily degenerates. For this information I am indebted to Mr. Murray's paper on Scotch (referred to in the last note), which was kindly shewn to me in the MS. The notes there furnished on the development of Scotch orthography are highly interesting, and tend to establish an intentional phonetic reformation at this early period, removing Scotch spelling from the historical affiliation which marks the English.

² "In Italian, Spanish, Portuguese, and Provençal, Latin *A* remains unaltered. Some deviations into *ai* or *e* must be admitted. . . . The most important and frequent case is when *a* by

in English after the sound of (*ee*) in what many persons recognize as the "standard" pronunciation of our language, for instance (*neem*) for *name*. There are a few straggling instances in even XIIIth century MSS. where *ay* appears to rhyme to *e*, the chief of which turn on apparently a dialectic pronunciation of *sai*de as *sede*, which is also an orthography occasionally employed (p. 484, l. 15, p. 481, l. 33). Dr. Gill, 1621 (*Logonomia* p. 17), cites (*sed*) as a northern pronunciation for (*said*), and classes it with (*saa*) for (*sai*). Mr. Payne has pointed out similar cases in the Owl and Nightingale, v. 349, 707, 835, 1779. The orthography *sede* occurs also, v. 472, 548, 1293, and probably elsewhere.¹ Mr. Payne also notes the less usual rhymes: *bigrede upbreide* 1411, *misrede maide* 1061, *grede maide* 1335. These rhymes are certainly faulty, because in each case the ags. has a *g* in the second word but not in the first, and we cannot suppose them to have rhymed at this early period.² In Floris and

the action of an inserted coalescing *i* or *e*, according to the individual tendency of the language, passes into *ai*, or *ei*, or *e* and *ie*: prov. *air*, sp. *aire* from *aer*: prov. *primaïran* (otherwise only *primer premier*), port. *primeiro*, span. *primero*, it. *primiero*, from *primarius*; prov. *esclairar* from *esclariar* which also exists; prov. *bais*, port. *beijo*, span. *beso* from *basium*; prov. *fait*, port. *feito*, span. *hecho* from *factus* *e* being palatalised into *i*. . . . This vowel has suffered most in French, where its pure sound is often obscured into *ai*, *e* and *ie*. We must first put aside the common romance process, just noticed, by which this obscuration is effected by an inserted *i* as in *air*, *premier*, *baiser*, *fait*." Translated from Diez, Gr. der rom. Spr. 2nd. ed. i. 135.

¹ The Jesus Coll. Oxf. MS. reads *seyde* in each case.

² The orthography and rhymes of the Owl and Nightingale as exhibited in the Cott. MS. Calig. A. ix., followed by Wright, in his edition for the Percy Society, 1843, are by no means immaculate. The MS. is certainly of the XIIIth cent.ry, before the introduction of *ou* for *au*, that is, before 1280 or probably before the death of Henry III., 1272, (so that, as has been conjectured on other grounds, Henry II. was the king whose death is alluded to in the poem), and is contained in the same volume with the elder text of Lajamon, though it is apparently not by the same scribe. Nor should I be inclined to think that the scribe was a Dorsetshire man, although the poem is usually ascribed to Nicholas de Guildford, of Portisham, Dorsetshire.

The confusions of *e* *i*, *o* *e*, *e* *a*, recall the later scribe of Havelok. Dreim 21, cleine 301, are obvious scribal errors, corrected to *drem clene* in the Oxf. MS., and: crei 334, in Oxf. MS. *crey*, although put in to rhyme with *dai*, must be an error for *cri*. We have cases of omitted letters in: rise wse 53, wrste toberste 121, white wte 439, for *wise, verste* (?), *wite*. There are many suspicious rhymes, and the following are chiefly assonances: worse mershe 303, hei-sugge stubbe 505, worde forworthe 547, igremet of-chamed 931, wise ire 1027, oreve idorve 1151, flesche cwesse 1385, flijste vïct 405, and, in addition to the *ei*, *e* rhymes cited in the text, we have: forbroideth nawedeth 1381, in Oxf. MS. *ne awedep*. As to the present pronunciation of *ay*, *ey* in Dorsetshire, the presumed home of the poet, Mr. Barnes gives us very precise information: "The diphthongs *ai* or *ay*, and *ei* or *ey*, the third close long sound [that is, which usually have the sound of *a* in *mate*], as in May, hay, maid, paid, rein, neighbour, prey, are sounded—like the Greek *ai*,—the *a* or *e*, the first open sound, as *a* in father, and the *i* or *y* as *ee*, the first close sound. The author has marked the *a* of diphthongs so sounded with a circumflex: as *mây*, *hây*, *mâid*, *pâid*, *vâin*, *nâighbour*, *prây*." *Poems of Rural Life*, 2nd ed., p. 27.—That is, in Dorsetshire the sound (*ai*), which we have recognized as ancient, is still prevalent. This is a remarkable comment upon the false rhymes of the MSS. Stratmann's edition, 1868, is of no use for the present investigation, on account of its critical orthography.

Blanchefur, Lumby's ed. occurs the rhyme: muchelhede maide 51, which is similarly faulty.¹ See also p. 473 and notes there. We have likewise seen in some faulty west midland MSS. belonging to the latter part of the xvth century, (suprà p. 450, n. 2), that *ey* was regarded as equivalent to *e*. In the *Towneley Mysteries* we also find *ay*, *ey*, tending to rhyme either with *a* or *e*. In fact we have a right to suppose that in the xvth century, at least, the pronunciation of *ey*, *ay* as (ee) was gaining ground, for we could not otherwise account for the MSS. mentioned, for the adoption of the spelling in Scotch in 1500, p. 410, n. 3, and for the fact that Hart, —who from various other circumstances appears to have been a West Midland man—seemed to know absolutely no other pronunciation of *ay* than (ee) in 1551.² We have thus direct evidence of the coexistence of (ee, ai) in the xvth century, each perhaps limited in area, just as we have direct evidence of the present coexistence of both sounds in high German (p. 238), and Dyak (p. 474, note, col. 2). Such changes do not generally affect a whole body of words suddenly. They begin with a few of them, concerning which a difference prevails for a very long while, then the area is extended, till perhaps the new sounds prevail. We have an instance of this in the present coexistence of the two sounds (æ, u) for short *u*, p. 175 and notes. It is possible that although Gill in 1621 was highly annoyed at *maids* being called (meedz) in place of (maidz) by gentlewomen of his day (suprà, p. 91, l. 8), this very pronunciation might have been the remnant of an old tradition, preserved by the three rhymes just cited from the xiii th century to the present day, although this hypothesis is not so probable as that of scribal error. And if it were correct, it would by no means

¹ On consulting the Auchinleck MS. text of Floris et Blanchefur, the difficulty vanishes. Lumby's edition of the Cam. MS. reads, v. 49:

pou art hire ilich of alle pingē,
Both of femblaunt and of murninge,
Of fairneffe and of muchelhede,
Butepou art a man and heo a maide;
where the *both* of the second line makes the third line altogether suspiciously like an insertion. The Auchinleck MS., according to the transcription kindly furnished me by Mr. Halkett, the librarian of the Advocates Library, Edinburgh, reads, v. 53:

pou art ilich here of alle pingē
Of semblant and of mourning
But pou art a man and þe is a maide
pous þe wif to Florice faide.
Another bad rhyme in the Cam. MS. is v. 533.

Hele ihc wulle and noþing wreie
Ower beire cumpaignie
which in the Abbotsford Club edition

of the text in the Auch. MS. runs thus, v. 518:

To the king that þe hem nowt
biwreie

Where thorough thai were fiker to
dethe.

The editor suggests *biwreipe*, which would not be a rhyme. The real reading is manifestly *to deye*, arising, as Mr. Murray suggests, from the common MS. confusion of *y*, *p*. *Admiral* is both in the Auch. and Cott. MSS. constantly spelled *-ayl*, and hence we must not be offended with the rhyme, Admiral confail 799, for there was evidently an uncertain pronunciation of this strange word.

² This day (9 July, 1869) a workman, who spoke excellent English to me, called *specially* (spi:ʃəli). Had he any idea that others said (spe:ʃəli)? The facts in the text are perhaps partly accounted for by the influence of the Scotch orthography and pronunciation, referred to on p. 637, n. 1.

prove that the general pronunciation of *ay* in all words from ags. was not distinctly (ai) and that the (ee) pronunciation was not extremely rare.

In a former investigation it was attempted to shew that Norman French *ei*, *ai*, had at least frequently the same sound (ai), *suprà* pp. 453-459. Mr. Payne on the contrary believes that the sound was always pure (ee), and that the Norman words were taken into English, spellings and all, retaining their old sounds. He then seems to conclude that all the English *ay*, *ey*, were also pronounced with pure (ee), and maintains that this view agrees with all the observed facts of the case (p. 582). Prof. Rapp also, as we shall see, lays down that Early English Orthography was Norman, and as he only recognizes (ee) or (EE) as the sound of Norman *ai*, of course he agrees practically with Mr. Payne. Modern habits have induced perhaps most readers to take the same view, which nothing but the positive evidence of the practice of the XVIth century could easily shake.¹ But it would seem strange if various scribes, writing by ear, and having the signs *e*, *ee*, *ea*, *ie*, at hand to express the sound (ee), should persist in a certain number of words, in always using *ey*, *ay*, but never one of the four former signs, although the sounds were identical. This is quite opposed to all we know of cacographists of all ages, and seems to be only explicable on the theory of a real difference of sound, more marked than that of (EE, ee). Nay, more, some occasional blunders of *e* for *ey*, etc., would not render this less strange to any one who knows by painful experience (and what author does not know it?) that he does not invariably write the letters he intends, and does not invariably see his error or his printer's or transcriber's errors when he revises the work. The mistake of *e* for *ey* we might expect to be more frequent than that of *ay* for *e*. When the writer is not a cacographist, or common scribe, but a careful theoretical orthographer as Orrmin or Dan Michel, the absolute separation of the spellings *e*, *ey* becomes evidence. We cannot suppose that Dutchmen when they adopted *pais* called it anything but (pais), why then should we suppose Dan Michel, who constantly employs the spelling *pais*,² pronounced

¹ I was glad to learn lately from so distinguished an English scholar as Prof. H. Morley that he was always of opinion that *ay*, *ey*, were (ai) and not (ee).

² Mr. Morris's index to Dan Michel's *Ayenbite* refers to p. 261, as containing *pees* for *peace*. I looked through that page without discovering any instance of *pees*, but I found in it 11 instances of *pais*, *pays* and 3 of *paysible*. Thinking Dan Michel's usages important, I have extracted those words given in the index, which of course does not refer to the commonest ags. words of constant occurrence. This is the list, the completeness of which is not guaranteed, though probable: adreynt,

adraynkþ, agrayþi, etc., anpayri, aparceyueþ, apayreþ, asayd, asayled, atrayt, bargayn, batayle, baylif, baylyes, bayþ, contraye, cortays, cortaysie, couaitise, dayes, defayled, despayred, eyder either, eyr = *air*, eyren = *eggs*, eyse = *ease*, faili, fayntise, fornayce, germayn, graynes, greyner, longaynes, maimes, maine = *retinue*, maister, mayden, maystrie, meseyse, meyster, necebores, nejen, ordayni ordenliche, oreysonne, paye = *please*, payenes = *pagans*, pays, paysible, plait, playnercs, playni, playty, poruayþ, porueyonce praysy, quaynte, queayntese, queyntise, raymi, [ags. *reomian hryman*, to cry out,] strait, strayni, tuay, uileynie, uorlay, wayn = *gain*, wayt, weyuerindemen, yfayled, zaynt.

otherwise? And when we see some French words in Chaucer always or generally spelled with *e* which had an *ai* in French, as: resoun 276, sesoun 348, pees 2929, plesant 138, ese 223, 2672, why should we not suppose that in these words the (ee) sound was general, but that in others, at least in England, the (ai) sound prevailed? Nay more, when we find *ese* occasionally written *eyse* for the rhyme in Chaucer (suprà p. 250 and note 1, and p. 265), as it is in Dan Michel's prose, why should we not suppose that two sounds were prevalent, just as our own (niidh:ɪ, neidh:ɪ) for *neither*, and that the poet took the sound which best suited him? This appears to me to be the theory which best represents all the facts of the case. It is also the theory which best accords with the existing diversities of pronunciation within very narrow limits in the English provinces. It remains to be seen how it is borne out by the orthography of the Ha. Harlcian 7334, and the six newly published MS. texts, E. Ellesmere, Hc. Hengwrt, Ca. Cambridge, Co. Corpus, P. Petworth, and L. Lansdowne of the Canterbury Tales. For this purpose I have looked over the prologue and Knightes Tale, and examined a large number, probably the great majority of the cases, with the following results. The initial italic words, by which the lists are arranged, are in modern spelling, and where they are absent the words are obsolete. Where no initials are put, all the MSS. unnamed agree in the preceding spelling so far as having one of the combinations *ai*, *ay*, *ei*, *ey* is concerned, small deviations in other respects are not noted, but if any other letter is used for one of the above four it is named. The numbers refer to the lines of the Six Text edition, and they have frequently to be increased by 2 for Wright's edition of the Harleian MS.

The general unanimity of these seven MSS. is certainly remarkable. It seems almost enough to lead the reader to suppose that when he finds the usual *ay*, *ey* replaced by *a*, *e*, *i* in any other MSS., the scribe has accidentally omitted one of the letters of the diphthong, which being supplied converts *a*, *e*, *i* into *ay*, *ey*, *ai* or *ei* respectively. Thus when in v. 1530 all but L. use *ey* or *ay*, and in v. 1575 all, including L., use *ey* in *sodeynly*, *sodeynliche*, we cannot but conclude that *sodanly* in L. 1530, is a clerical error for *sodaynly*. We have certainly no right to conclude that the *a* was designed to indicate a peculiar pronunciation of *a* as *ay* or conversely. But it will be best to consider the variants *seriatim* as they are not many in number.

CONSIDERATION OF VARIANTS IN THE LAST LIST.

ANGLOSAXON AND SCANDINAVIAN WORDS.

Against 1787 has still two sounds (*gegenst*, *ugenst*) which seem to correspond to two such original sounds as (*again* *agen*).

Ashes, *aisshe*s Co. 2957 represented really a duplicate form, as appears from its having been preserved into the xvith century, p. 120, l. 6.

Die 1109, see variants on p. 284.

Dry 420, see variants on p. 285.

Dyer, the general orthography *dyer* 362 is curious, for the ags. *deagan* would naturally give *deyer*, which however is only preserved in Ha., the rest giving *dyere*, and the Promptorium having *dyyn*; Ha. has *deye* in 11037. It would almost seem as if habit had confused the two words *dye*, *die*, and hence given the first the same double sound as the second. There is no room for supposing the sound (*dee*) in either case.

Eye 10, see variants on p. 285.

Flesh, 147 is one of the words mentioned on p. 265, as having two spellings in Ha. see also p. 473 note 1, for a possible origin of the double pronunciation.

Height, *heht* P. 1890 is of course a clerical error for *heichte*.

Neighbour 535, follows *nigh* in its variants.

Nigh 732, 535. The variants here seem to shew that this word should be added to the list given on pp. 284-6, as having a double pronunciation, especially as we have seen that the (ii) sound is preserved in Devon, p. 291, as it is in Lonsdale.

Seen. The orthography *seyn* 2840 for *seen* is supported by too many MSS. to be an error, it must be a du-

plicate form, retaining in the infinitive the expression of the lost guttural, which crops up so often in different parts of this verb, Gothic *saihuwan*, compare the forms on p. 279.

Slay 992, see p. 265; the double sound (*ee*, *ai*) may have arisen from the double ags. form, without and with the guttural, the latter being represented by (*ai*) and the former by (*ee*), which is more common.

Spreind, *ispreind*, *isprind* 2169 must be merely clerical errors for *ispreined*, as in most MSS., because both words rhyme with *ymeynd*, which retains its orthography in each case.

Whether, 1857, has certainly no more title to (*ai*) than *beat* or *them*, but nevertheless we have seen Orrmin introduce the (i) or (j) into these words, p. 489, hence it is not impossible that there may have been some provincials who said *wheider*, but still it is more probable that the *ei* of E. and He. in 1857 are clerical errors. The word is not common and I have not noted another example of it in E. He.

FRENCH WORDS.

Barren, *baran* L. 1977, must be a clerical error for *barayn*.

Braid 1049, seems to have had various sounds, corresponding to the ags. *bregdan*, icel. *bregda*, and to the French *broder*, which would give the forms *breyde*, *broude*. while *broyde* would seem to be an uncertain, or mistaken mixture of the two (*braid*-e, *bruud*-e, *bruid*-e). We do not find *brede* (*breed*-e). but as the *g* was sometimes omitted even in ags. it would have been less curious than *brayde*.

Caitiff. The orthography *catiff* P. 1552, 1717, 1946, being repeated in

three places, although opposed to the other six MSS which determine *caytif* to be the usual form, may imply a different pronunciation rather than be a clerical error. The French forms of this derivative of the Latin *captivus*, as given by Roquefort are very numerous, but all of them contain *i*, or an *e* derived from *ai*, thus: *caitif*, *caiptif*, *caiteu*, *caitis*, *caitiu*, *caitivié*, *cetif*, *cetis*, *chaitieu*, *chaitif*, *chaitis*, *chaitiu*, *cheitif*, *chetif*, *chety*, *quaitif*, *quetif*. Roquefort gives as Provençal and Languedoc forms: *caitiou*, *caitious*, *caitius*, *caitivo*. The Spanish *cautivo* has introduced the labial instead of the palatal modification, while the Italian only has preserved the *a* pure by assimilating *p*, thus, *cattivo*. If then the *a* in P. was intentional, it was very peculiar.

Chieftain, *cheveten* Ha. 2555, should according to the general analogy of such terminations be *cheveteyn*, and it will then agree with the other MSS.

Company. In *compaignye* 331, 2105, 2411, the *i* is conceived by M. Francisque Michel to have been merely orthographical in French, introduced to make *gn mouillé*, just as *i* was introduced before *ll* to make it *mouillé*. Compare also p. 309, n. 1, at end. It is very possible that both pronunciations prevailed (*kumpaini'e*, *kumpaini'e*) and that the first was considered as French, the latter as English. There is no room for supposing such a pronunciation as (*kumpeini'e*) with (*ee*).

Conveyed. *Conuoyed* E. 2737 is not a variant of the usual *conveyed*, but another word altogether, a correction of the scribes.

Counsel, *counsel* L. 3096, is probably a clerical error for *counseil* as in the other MSS.

Courtesy. *Curteisye* 46, *vileyne* 70, may be considered together. They were common words, and the second syllable was usually unaccented, whereas in *curteis*, *vileyne*, it was frequently accented. Hence we cannot be surprised at finding *ey* strictly preserved in the latter, but occasional deviations into non-diphthongal sounds occurring in the former. Careful scribes or speakers seem, however, to have preserved the *ey* of the primitive in the derivative. The *vilonye* of Ha. Co. P. 70, which is replaced by *vilanye* in Ha.

740, serves to corroborate this view, as evidently the scribe did not know how to write the indistinct sound he heard, a difficulty well known to all who have attempted to write down living sounds. See also Mr. Payne's remarks, *suprà* p. 585. To the same category belong the variants of *portraiture*, *purveyance*, *verily*.

Dais, dese L. for *deys* = *dais* 370, in opposition to the six other MS is probably a clerical error for *deyse* the final *e* being added also to the rhyming word *burgeise* in L. which retains the *i*.

Dice. *Deys* Ca. 1238 for *dys* is clearly an error as shewn by the rhyming word *paradys*, but *dys* itself seems to have been accommodated to the rhyme for *dees*, which occurs in Ha. 13882, and is the natural representative of the French *dés*.

Finest. The orthography *feynest* Ca. 194, must be a clerical error.

Florin. The *floren*, *florin*, *floreyn* 2088 may be concurrent forms of a strange word, and the last seems more likely to have been erroneous.

Fresh 92, had no doubt regularly (*ee*), but the older (*ai*) seems to have been usual to some, the *frosshe* of Ca. is a provincialism of the order noted on p. 476

Kerchiefs. *Couercheis* Ca. 453, is probably a mere clerical error for *couercheys*, *i* having been written for *f*, as we can hardly suppose the provincial scribe of Ca., to have selected a Norman form by design.

Maintain. *Maynteyne* 1778, *susteyne* 1993, belong to the series of words derived from *tener*. There is no disagreement respecting the *ay* in the first syllable of *maynteyne*; *sustene* is fully supported by the rhyme, p. 265, l. 1, and hence *mayntene*, *sustene* are probably the proper forms. I have unfortunately no note of the Chaucerian forms of *obtain*, *detain*, *retain*, *contain*, *appertain*, *entertain*, *abstain*, but probably *-tene* would be found the right form. The spelling *ey* and pronunciation (*ai*) may have crept in through a confusion with the form *-teyne* = Lat. *-tingere*, of which I have also accidentally been guilty p. 265, l. 25, as: *atteyne*, *bareyne*, must rhyme, 1243, 8323, and as *-stringere* produces *-streyn* 1455, 1816 in all MSS.

Master, *mystir* Ca. 261 for *master* is probably a clerical error.

Portraiture 1968, *portray* 1899; the variants may be explained as in *Courtesy*, which see.

Portraying. In *portreyng*, *portreyng* 1938 there is an omission of one *y* on account of the inconvenience of the *yy* in the first form, overcome by changing the first *y* into *i* in P.

Purveyance 1165, the variants may be explained as in *Courtesy*, which see.

Straight. Stryt Ca. 1984, must be a clerical error for *streyt*, as the absence of *e* is quite unaccountable.

Suddenly. Sodaynly L. 1530 must, as we have seen p. 643, be an error for *sodaynly*.

Sustain 1993 see *Maintain*.

Turneynge Ha. 2557; the variants are to be explained as those of *portraying*, which see.

Verily 1174, the variants may be explained as in *Courtesy*, which see.

Villany 70, see *Courtesy*.

Wasseyllage Ca. 3054, certainly arose from a confusion in the scribe's mind, *vasselage* valour being unusual, he reverted to the usual *wasseyl* for an explanation, and in *wasseyl* we have an *ey* for an ags. *e*, which may be compared with *ey* for *ea* in Orrmin, *suprà* p. 489.

The natural effect of this examination has been to place the variants rather than the constants strongly before the reader's mind. He must therefore recollect that out of the total of 111 words the following 73, many of which occur very frequently, are invariably spelt with one of the phonetically identical forms *ai*, *ay*, *ei*, *ey*, in each of the seven MSS. every time they occur:—

again, aileth, bewray, day, fain, fair, laid, lay, maidens, nails, neither, said, say, sleight, two *tweye*, waileth, way, weighed.—acquaintance, *aioul*, air, *apayd*, apparelling *apparaillynge*, array, attain, availeth, bargains, battle *bataille*, certain, chain, *châtaigne*, complain, *darryne*, debonnair, despair, dice, disdain, displayeth, distraineth,

dozen, fail, franklins *frankeleyns*, furnace *forneys*, gaineth, gay, *golyardeys*, harnessed *harneysed*, leisure, Magdalen *Maudelayne*, mastery, *meyned*, money, ordained, paid, pained, painted, palace *paleys*, palfrey, plain, *plein*, portray, pray, prayer, quaint, raineth, reins, sovereign, trace *trays*, turkish *turkeyes*, vain, vein, very, wailing.

On the other hand, the variants only affect 38 words, of which few, except those already recognized to have two forms in use, occur more than once, while the variants confined to one or two MSS. display no manner of rule or order, and are far from shewing a decided *e* form as the substitute for *ay*, *ey*. They may be classified as follows:

15 CLERICAL ERRORS: *height* heght, *spreyned* sprend sprined, *whether* wheither,—barren baran, *chieftain*, chevetan, *counsel* counsel, *dice* deys, *finest* feynest, *kerchiefs* couercheis, *maintain* maynteyne mayntene, *master* mystir, *straight* stryt, *suddenly* sodanly, *sustain* susteyne, *turneynge* turnyngte tornynge.

12 DOUBLE FORMS: *ashes* aishses asshen, *die* deyen dyen, *dry* dreye drye, *dyer* dyere deyer, *eye* eighe yhe, *flesh* fleiss flessh, *neighbour* neigheboare ny:hebour, *nigh* neigh nyghe, *seen* seyn seen, *slain* slayn sleen,—*braided* breided browdid, *fresh* fresshe freisshe.

6 INDISTINCT UNACCENTED SYLLA-

BLES: *courtesy* courteisie curtesie, *portraiture* portreiture pourtrature, *portray* portreyor purtreoure, *purveyance* purveiance purueance puruyance, *verily* verrailly verrelly verrilly, *villany* vileynye velany vilonye.

6 MISCELLANEOUS: *caitiff* may have been occasionally *catiff* as well as *caytiff*—*conuoyed* was a different reading, not an error for *conveyed*—*florin* being a foreign coin may have been occasionally mispronounced *foreyn*,—*portreing* was an orthographical abbreviation of *portreiyng*—*wasseyllage* was a manifest error for the unusual *vasselage*, the usual *wasseyl* occurring to the scribe.

The variants, therefore, furnish almost as convincing a proof as the constants, that *ay*, *ey* represented some sound distinct from *e*.

(ee). But if there was a distinct sound attachable to these combinations *ay*, *ey*, in Chaucer's time, what could it have possibly been but that (ai) sound, which as we know by direct evidence, subsisted in the pronunciation of learned men and courtiers (Sir T. Smith was secretary of state) during the xvith century, and which the spelling used, and no other, was calculated to express, and was apparently gradually introduced to express. The inference is therefore, that Chaucer's scribes pronounced *ay*, *ey* as (ai) and not as (ee), and where they wished to signify the sound of (ee), in certain well-known and common Norman words, they rejected the Norman orthography and introduced the truly English spelling *e*. The inference again from this result is that there was a traditional English pronunciation of Norman *ai*, *ei*, as (ai), which may have lasted long after the custom had died out in Normandy, on the principle already adduced (p. 20), that emigrants preserve an older pronunciation.

TREATMENT OF FINAL E IN THE CRITICAL TEXT.

As the following text of the Prologue is intended solely for the use of students, it has been accommodated to their wants in various ways. First the question of final *e* demanded strict investigation. The helplessness of scribes during the period that it was dying out of use in the South, and had already died out in the North, makes the new MSS. of little value for its determination, the Cambridge and Lansdowne being evidently written by Northern scribes to whom a final *e* had become little more than a picturesque addition. It was necessary therefore to examine every word in connection with its etymology, constructional use, and metrical value. In every case where theory would require the use of a final *e*, or other elided letter, but the metre requires its elision, it has been replaced by an apostrophe. The results on p. 341 were deduced from the text adopted before it had been revised by help of the Six-Text Edition, and therefore the numbers there given will be slightly erroneous¹, but the reader will by this means understand at a glance the bearing of the rules on p. 342.

The treatment of the verbal termination *-ede*, required particular attention. There are many cases in which, coming before a consonant, it might be *-ed'* or *-'de*, and it was natural to think that the latter should be chosen, because in the contracted forms of two syllables, we practically find this form; thus: *fedde* 146, *bledde* 145, *wente* 255, *wiste* 280, *spente* 300, *coude* 326, 346, 383, *kepte* 442, *dide* 451, *couthc* 467, *tawghte* 497, *cawghte* 498, *kepte* 512, *wolde* 536, *mighte* 585, *scholde* 648, *seyde* 695, *moste* 712 and

¹ The number of elisions of essential *e*, stated at 13 on p. 341, has been reduced. The only important one left is *meer* 541, and that is doubtful on account of the double form of the rhyming word *milteer*. see p. 389. The number of plural *-es* treated as *-s* has been somewhat increased. The fol-

lowing are examples: *palmer's* 13, *servawnt's* 101, *fether's* 107, *finger's* 129, *hunter's* 178, *grayhound's* 190, *sleeve's* 193, *tavern's* 240, *haven's* 407, *housbond's* 460, *aventur's* 795. Of course (') is not used as the mark of the genitive cases, but only to shew a real elision.

many others. But even here it is occasionally elided. Mr. Morris observes that in the Cambridge MS. of Boethius, and in the elder Wycliffite Version (see below § 3), the *-ede* is very regularly written. This however does not prove that the final *e* was pronounced, because the orthography *hire*, *here*, *oure*, *youre*, is uniform, and the elision of the final *-e* almost as uniform. The final *e* in *-ede* might therefore have been written, and never or rarely pronounced. It is certain that the first *e* is sometimes elided, when the second also vanishes, as before a vowel or *h* in: *lov'd* 206, 533, *gam'd* 534, etc. But it is also certain that *-ed'* was pronounced in many cases without the *e*, *suprà* p. 355, art. 53, Ex. Throughout the prologue I have not found one instance in which *-ede*, or *-'de*, was necessary to the metre,¹ but there are several in which *-ed'*, before a vowel, is necessary. If we add to this, that in point of fact *-ed'* remained in the *xv*th century, and has scarcely yet died out of our biblical pronunciation, the presumption in favour of *-ed'* is very strong.² On adopting this orthography, I have not found a single case in the prologue where it failed, but possibly such cases occur elsewhere, and if so, they must be compared to the rare use of *hadde*, and still rarer use of *were*, *here* for the ordinary *hadd'*, *wer'*, *her'*.

The infinitive *-e* is perhaps occasionally lost. It is only saved by a trisyllabic measure in: *yve penawnce* 223. If it is not elided in *help'* 259, then we must read *whelpo* 258, with most MSS. but unhistorically. On the other hand the subjunctive *-e* remains as: *ruste* 500, *take* 503, *were* 582, *spede* 769, *quyte* 770.

Medial elisions must have been common, and are fully borne out by the Cuckoo Song, p. 423. Such elisions are: *ev'ry* 15, 327, *ev'ne* 83, *ov'ral* 249, *ov'rest* 290, *rem'nawnt* 724, and: *mon'th* 92, *tak'th* 789, *com'th* 839. The terminations *-er*, *-el*, *-en*, when run on to the following vowel, should also probably be treated as elisions. As respects *-er*, *-re*, I have sometimes hesitated whether to consider the termination as French *-re*, or as assimilated into English, under the form *-er*, but I believe the last is the right view, and in that case such elisions as: *ord'r he* 214, are precisely similar to: *ev'ry* 15, and occasion no difficulty. Similarly, *-el*, *-le*, are both found in MSS., but I have adopted *-el*, as more consonant with the treatment of strictly English words, and regarded the cases in which the *l* is run on to the following word, as elisions, thus: *simp'l* and 119. Such elisions are common in modern English, and in the case of *-le*, they form the rule when syllables are added, *suprà* p. 52. In: *to fest'n' his hood* 195, we have an elision of *e* in *en*, and a final *e* elided, the full gerundial form being *to festene*, as it would be written in prose.

¹ The plural *weygheden* 454, is not in point.

² Mr. Murray observes that *loved* would be an older form than *loved for loved*, and grounds his observation on the fact of the similar suppression of the *y* before *l* in *tabyll*, *sadyll*, *fadyr*, *modyr*, in the old Scotch plurals

tablys, *sadlys*, *fadrys*, *modrys*, but its subsequent restoration, accompanied by a suppression of the *y* before the *s*, in the more recent forms *tabylls*, *sadylls*, *fadyrs*, *modyrs*. These analogies are valuable. All that is implied in the text is that the form *-ed* seems to have prevailed in Chaucer.

As the text now stands there is no instance of an open *e*, that is, of final *e* preserved before a vowel (suprà p. 341, l. 2. p. 363, art. 82, and *infra* note on v. 429), but there is one instance of final *e* preserved before *he*, (*infra* note on v. 386).

METRICAL PECULIARITIES OF CHAUCER.

The second point to which particular attention is paid in this text is the metre. Pains have been taken to choose such a text as would preserve the rhythm without violating the laws of final *e*, and without having recourse to modern conjecture. For this purpose a considerable number of trisyllabic measures (suprà p. 334) have been admitted, and their occurrence is pointed out by the sign *iii* in the margin. The 69 examples noted may be classified thus:

<i>i-</i> , arising from the running on of <i>i</i> to a following vowel, either in two words as: many a 60, 212, 229, etc., <i>bisy</i> a 321, <i>cari</i> a 130, <i>studi</i> and 184, or in the same word, as: <i>lusiveer</i> 80, <i>curious</i> 196, <i>bisier</i> 321, which may be considered the rule in modern poetry, see 60, 80, 130, 184, 196, 212, 229, 303, 321, 322, 349, 350, 396, 438, 464, 530, 560, 764, 782, 840, instances	20
<i>-er</i> , arising from running this unaccented syllable on to a following vowel, in cases where the assumption and pronunciation of <i>-r</i> would be harsh, as: <i>deliver</i> , and 84, <i>sommer hadd</i> 394, <i>water he</i> 400; and in the middle of a word, as: <i>colerik</i> 587, <i>leccherous</i> 626; instances	5
<i>-el</i> , not before a preceding vowel, as: <i>mesurabel was</i> 435, <i>mawncipel was</i> 567, <i>mawncipel sett</i> 586, instances	3
<i>-en</i> , not before a preceding vowel, as: <i>ycomen from</i> 77; or before a preceding vowel or <i>h</i> , where the elision ' <i>n</i> ' would be harsh, as: <i>writen</i> a 161, <i>geten him</i> 291, instances	3
<i>-e</i> , arising from the pronunciation of final <i>e</i> , where it seems unnecessary, or harsh, to assume its suppression, as 88, 123, 132, 136, 197, 208, 223, 224, 276, 320, 341, 343, 451, 454, 475, 507, 510, 524, 537, 550, 630, 648, 650, 706, 777, 792, 806, 834, 853, instances.	29
<i>Miscellaneous</i> , in the following lines, where the trisyllabic measures are italicised for convenience.	
Of Engeland', to Cawnterbery <i>they wende</i> .	16
To Cawnterbery <i>with ful</i> devout corage.	22
His heed was balled, <i>and schoon</i> as any glas.	198
And thryes hadd' <i>she been</i> at Jerusalem.	463
Wyd was his <i>parisch</i> and houses fer asonder.	491
He was a <i>schepperd</i> , and not a mercenarie.	514
He waited after <i>no pomp</i> and reverence.	525
Ther coude no man bring' <i>him in</i> arrerage.	602
And also war' <i>him of</i> a significavit.	662
Total	69

It would have been easy in many cases by elisions or slight changes to have avoided these trisyllabic measures, but after considering each case carefully, and comparing the different manuscripts, there did not appear to be any sufficient ground for so doing.

Allied to trisyllabic measures are the lines containing a superfluous unaccented syllable at the end, but to this point, which was a matter of importance in old Italian and Spanish versification, and has become a matter of stringent rule in classical French poetry, no attention seems to have been paid by older writers, whether French or English, and Chaucer is in this respect as free as Shakspeare.

There are a few cases of two superfluous unaccented syllables, comparable to the Italian *versi sdruccioli*, and these have been indicated by (+) in the margin. There are only 6 instances: berye merye 207, 208, apotecaryes letuaryes 425, 426, miscarye mercenarye 513, 514, all of which belong to the class *i-*, so that the two syllables practically strike the ear as one.

But there are also real Alexandrines, or lines of six measures, which do not appear to have been previously noticed, and which I have been very loth to admit. These are marked vi in the margin. There are four instances. In:

But sore wepte sche if oon of hem wer' deed. 148

the perfect unanimity of the MSS., and the harsh and unusual elision of the adverbial *-e* in *sore*, and the not common elision of the imperfect *e* in *wepte*, which would be necessary to reduce the line to one of five measures, render the acceptance of an Alexandrine imperative, and certainly it is effective in expressing the feeling of the Prioress. In:

Men mote yve silver to the pore freres. 232

the Alexandrine is not pure because the cæsura does not fall after the third measure. But the MSS. are unanimous, the elisions *mot' yev'* undesirable, and the lengthening out of the line with the tag of "the pore freres," seems to indicate the very whine of the begging friar. In

With a thredbare cop', as a pore scoleer. 260

the pore which lengthens the line out in all MSS., seems introduced for a similar purpose. The last instance

I ne sawgh not this yeer so mery a companye. 764

is conjectural, since no MS. gives the reading complete, but: I ne sawgh, or: I sawgh not, are both unmetrical, and by using both we obtain a passable Alexandrine, which may be taken for what it is worth, because no MS. reading can be accepted.

The defective first measures to which attention was directed by Mr. Skeat, *suprà* p. 333, have been noted by (—), and a careful consideration of the MSS. induces me to accept 13 instances, 1, 76, 131, 170, 247, 271, 294, 371, 391, 417, 429, 733, 778, though they are not all satisfactory, as several of them (131, 247, 271, 391, 778) offend against the principle of having a strong accent on the first syllable, and two (417, 429) throw the emphasis in rather an unusual manner, as: *weel coud' he*, *weel knew he*, where: *weel coud' he*, *weel knew he*, would have rather been expected, but there is no MS. authority for improving them.

Three instances have been noted of *saynt* forming a dissyllable, as already suggested, (*suprà* pp. 264, 476), one of which (697), might be escaped by assuming a bad instance of a defective first measure, but the other two (120, 509,) seem clearly indicated by MS. authority. See the notes on these passages. They are indicated by *ai* in the margin.¹

¹ Mr. Murray has observed cases in Scotch in which *ai* was dissyllabic, but then it had its Scotch value (*ae*), *suprà* p. 637, n. 1. He cites from Wyn-

CHAUCER'S TREATMENT OF FRENCH WORDS.

The third point to which attention is directed in printing the text of the prologue, is linguistic rather than phonetic, but seemed of sufficient interest to introduce in a work intended for the use of the Chaucer Society, namely, the amount of French which Chaucer admitted into his English. "Thank God! I may now, if I like, turn Protestant!" exclaims Moore's Irish Gentleman on the evening of 16th April, 1829, when the news of the royal assent to the Catholic Relief Bill reached Dublin.¹ And in the same way it would appear that the removal of the blockade on the English language, when after "*þe furste moreyn*," 1348, "*John Cornwal, a maystere of grammere, chaungede þe lore in grāmere scole*,"² and Edward III. enacted in the 36th year of his reign, 1362-3, that all pleas should be pleaded and judged in the English tongue, the jealous exclusion of French terms from English works, which marks the former period, seemed to cease, and English having become the victor did not disdain to make free use of the more "gentle" tongue, in which so many treasures of literature were locked up. Even our older poems are more or less translations from the French, though couched in unmistakable English. But in the *xvth* century we have Gower writing long poems in both languages, and Chaucer familiar with both, and often seeking his originals in French. The people for whom he principally wrote must have been also more or less familiar with the tongue of the nobles, and large numbers of French words must have passed into common use among Englishmen, before they could have assumed English inflectional terminations. We have numerous instances of this in Chaucer. Whenever a French verb was employed, the French termination was rejected, and an English inflectional system substituted. Thus using italics for the French part, we have in the prologue: *perced* 2, *engend'rd* 4, 421, *inspired* 6, *escd* 29, *honour'd* 50, *embrouded* 89, *harneysed* 114, *entuned* 123, *peyned* 139, *rosted* 147, *ypinched* 151, *gawded* 159, *crouncd* 161, *purfyled* 193, *farsed* 233, *accorded* 244, *envyned* 342, *chaunged* 348, *passed* 464, *encombred* 508, *spyced* 526, *ypunish'd* 657, *trussed* 681, *feyned* 705, *assembled* 717, *served* 749, *graunted* 810, *pray'den* 811, *reuled* 816, *studieth* 841.—*flouting'* 91, *harping'* 266, *offring'* 450, 489, *assoyling* 661, —*cry'* 636, *rost'*, *broyll'*, *fryc* 383, *rehers'* 732, *feyne* 736. Again we have an English adjective or adverbial termination affixed to French words, as: *specialy* 15, *fetisly* 124, 273, *certainly* 235, *solemnely* 274, *staately* 281, *estaadlich* 140, *verrayly* 338, *really*

=royally 378, devoutly 482, scarcely 583, privily 609, subtilly 610, prively 652, playnly 727, properly 729, rudely 734.—*dett'lees* 582.—In *esy* 441, *pomely* 616, we have rather the change of the French *-e* into *-y*, which subsequently became general, but the *ese* remains in: *esely* 469. In: *daggeer* 113, 392, we have a substantive with an English termination to a French root. *Footmantel* 472, is compounded of an English and French word. In: *daliauonce* 211, *loodmannage* 403, *deyerye* 577, French terminations only are assumed. A language must have long been in familiar use to admit of such treatment as this. What then more likely than the introduction of complete words, which did not require to have their terminations changed? The modern cookery book and fashion magazines are full of French words introduced bodily for a similar reason. Of course the subject matter and the audience greatly influence the choice of words, and we find Chaucer sensibly changing his manner with his matter—see the quantity of unmixed English in the characters of the Yeman, the Ploughman, and the Miller. To make this admixture of French and English evident to the eye, all words or parts of words which may be fairly attributed to French influence, including proper names, have been italicised, but some older Latin words of ecclesiastical origin and older Norman words have not been marked and purely Latin words have been put in small capitals.¹ The result could then be subjected to a numerical test, and comes out as follows:

Lines containing no French word . .	325,	per cent.	37·9

Lines in the Prologue .	858	100·0
-------------------------	-----	-------

If the total number of French words in the prologue be reckoned from the above data, they will be found to be 761, or *not quite one word in a line on an average*. The overpoweringly English character of the work could not be more clearly demonstrated.

Chaucer's language may then be described as a degraded Anglo-Saxon, into which French words had been interwoven, without interfering with such grammatical forms as had been left, to the extent of about 20 per cent., and containing occasionally complete French phrases, of which, however, none occur in the prologue. To understand the formation of such a dead dialect, we have only to watch the formation of a similarly-constructed living dialect. Such a one really exists, although it must rapidly die out, as there are not only not the same causes at work which made the language of Chaucer develop into the language of England, but there are other and directly contrary influences which must rapidly lead to the extinction of its modern analogue.

¹ These are very few in number, see *Maur'* or of *Saynt Bencyt*. 173, in 5, 162, 254, 336, 429, 430, 646, 662. which the French words were indispensable.

PENNSYLVANIA GERMAN THE ANALOGUE OF CHAUCER'S ENGLISH.

Fully one half of the people of Pennsylvania and Ohio in the United States of America understand the dialect known as Pennsylvania German. This neighbourhood was the seat of a great German immigration from the Palatinate of the Rhine¹ and Switzerland. Here they kept up their language, and established schools, which are now almost entirely extinct. Surrounded by English of the xviith century they naturally grafted some of its words on their own, either as distinct phrases, or as the roots of inflections; and, perhaps, in more recent times, when fully nine-tenths of the present generation are educated in English, the amount of introduced English has increased.² The result is a living dialect which may be described as a degraded³ High German, into which English

¹ See *supra*, p. 47, lines 5 to 15.

² Some of these particulars have been taken from the preface to Mr. E. H. Rauch's *Pennsylvanish Deutsch! De Breefa fum Pit Schweflebbrenner un de Bevv, si Fraw, fun Schliffletown on der Drucker fum "Father Abraham,"* Lancaster, Pa., 1868, and others from information kindly furnished me by Rev. Dr. Mombert, Lancaster, Pennsylvania, U.S., in April, 1869.

³ This does not mean that it is a degraded form of the present literary high German, but merely of the high German group of Germanic dialects. On 19 Aug. 1869, the 14th meeting of the German Press Union, of Pennsylvania, U.S., was held at Bethlehem, when an interesting discussion took place on Pennsylvania German, or *das Deutsch-Pennsylvanische*, as it is termed in the *Reading Adler* of 31 Aug. 1869, a German newspaper published at Reading, Berks County, Pa., U.S., from which the following account is translated and condensed. Prof. Notz, of Allentown, who is preparing a Pennsylvania German grammar, drew attention to the recent German publications on Frankish, Upper-Bavarian, Palatine, Swabian, and Swiss dialects, and asserted that the Penn. Germ. had an equally tough existence (*zähes Leben*) and deserved as much study. Mr. Dan E. Schödtler declared that the Germans of Pennsylvania could only be taught literary high German, in which their divine service had always been conducted, by means of their own dialect. Dr. G. Kellner justified dialects. He considered that linguists, including J. Grimm, had not sufficiently comprehended the importance of dialects. Speech was as natural to man as walk-

ing, eating, and drinking, and the original language of a people was dialectic, not literary, which last only finally prevailed, to use Max Müller's expression as the high language, (*Hochsprache*). The roots of a literary language were planted in its dialects, whence it drew its strength and wealth, and which it in turn modified, polished and ennobled. Was Penn. Germ. such a dialect? Many English speakers, who knew nothing of German dialects, might deny it, and so might even many educated north Germans, who were unacquainted with the south German dialects, and regarded all the genuine southern forms of Penn. Germ. as a corrupted high German, or as idioms borrowed from the English. They would therefore style it a jargon, not a dialect. Certainly, the incorporation of English words and phrases had given it some such appearance, but on removing these foreign elements it remained as good a dialect as the Alsatian after being stripped of its Gallicisms, in which dialect beautiful poems and tales had been written, taking an honourable position in German literature. Penn. Germ., apart from its English additions, was a south German dialect, composed of Frankish, Swabian, Palatine, and Allemannie, which was interlarded with more or less English, according to the counties in which the settlements had occurred; in some places English was entirely absent. All that marked a dialect in Germany was present in Penn. Germ., and since new immigration was perpetually introducing fresh high German, the task would be to purify the old dialect of its English jargon, and use the result for the benefit of the people

words have been interwoven, without interfering with such grammatical forms as had been left, and containing occasionally complete English phrases. On referring to the first sentence of the last paragraph, the exact analogy of Pennsylvania Dutch to Chaucer's English will be at once apprehended. The dialect is said to possess a somewhat copious literature, and it is certainly an interesting study, which well deserves to be philologically conducted.¹ For the present work it has an additional special value, as it continually exhibits varieties of sound as compared with the received high German, which are identical with those which we have been led to suppose actually took place in the development of received English, as (*oo, ee, aa*) for (*aa, ai, au*).

The orthographical systems pursued in writing it have been two, and might obviously have been three or more. The first and most natural was to adopt such a German orthography as is usually employed for the representation of German dialects, and to spell the introduced English words chiefly after a German fashion. This is the plan pursued, but not quite consistently,² in the following extract, for which I am indebted to Dr. Mombert. The English constituents are italicised as the French are in the following edition of the prologue. A few words are explained in brackets [], but any one familiar with German will understand the original, which seems to have been written by an educated German familiar with good English.

of Pennsylvania. The Penn. Germ. press was the champion of this movement, by which an entire German family would be more and more imbued with modern German culture. As a striking proof of the identity of Palatine with Pennsylvanian German, he referred to Nadler's poems called *Fröhlich Pfalz, Gott erhalt's*, which, written in the Palatine dialect, were, when read out to the meeting by Dr. Leisenring, a born Penn. German, as readily intelligible to the audience as if they had been written in Penn. German. Prof. Notz also observed that in Germany the people still spoke among one another in dialects, and only exceptionally in high German when they spoke with those who had received a superior education—and that even the latter were wont to speak with the people in their own dialect. This was corroborated by Messrs. Rosenthal, Hesse, and others. On the motion of Prof. Notz, it was resolved to prosecute an inquiry into the Germanic forms of expression in use in Pennsylvania, and to report thereon, in order to obtain materials for a complete characterisation of the dialect.

¹ Prof. S. S. Haldeman, of Columbia, Pennsylvania, to whom I have been

under great phonetic obligations, and who has been familiar with the dialect from childhood, has promised to furnish the Philological Society with some systematic account of this peculiar hybrid language, the living representation not only of the marriage of English with Norman, but of the breaking up of Latin into the Romance dialects. The Rev. Dr. Mombert, formerly of Lancaster, Pennsylvania, but now of Dresden, Saxony, who has long been engaged in collecting specimens, has also promised to furnish some additions. The preceding note shews the interest which it is now exciting in its native country. In this place it is only used as a passing illustration, but through the kindness of these competent guides, I am enabled to give the reader a trustworthy account so far as it goes.

² Thus *ēy* is used for *ee* in *kēyn* = (*keen*), or rather (*keen*) according to Dr. Mombert, and *ee* for *ih* (ii) in *Teer*, which are accommodations to English habits. *Cowskin* retains its English form. A more strictly German orthography is followed in *L. A. Wollenweber's Gemälde aus dem Pennsylvanischen Volksleben*, Philadelphia und Leipzig, 1869, p. 76.

Ein Gespräch.

1. Ah, *Düvee*, was hot Dich gestern Owent [Abend] so vertollt *schmürt* aus *Squeier* Essebeises kumme mache? War ebbes [etwas] letz¹?

2. Nix apartiges! ich hab jusht a bissel mit der *Pally gespärkt* [played the spark], als Dir ganz unvermüth der olte Mann derzu kummt, ummer [und mir] zu vershte' gibt, er dät des net *gleiche*.²

1. Awer [aber] wie hot er's dir zu vershteh' gegewe' (gegeben)? Grob oder höflich?

2. Ach net [nicht], er hat këyn [kein] wort geschwätzt.

1. *Well*, wie hot er's dann g'mocht?

2. Er hat jusht de Teer

[Thüre] ufg'mocht, mir mei' Hüth in de Hand 'gewe' un' de *Cowskin* von der Wand g'kricht [gekriegt]. Do hob' ich g'denkt, er thät's net *gleiche*, dass ich die *Pally shpärke* thät un bin grod fortgange; des wer alles, *Säm*.

1. Ja, geleddert hot er Dich, *Düvee*, dann du bist net gange,— g'shprunge bischt Du als wenn a dutzend Hund hinnig [hinter] Dich her wären. Ich hab dich wohl gesëyhne [gesehen].

2. *Well*, sei nur sthilt drfon [davon], und sags Niemand, sonst werd' ich ausgelacht.

Säm versprach's; awer *somhow* muss er sich doch verschnappt hawe [haben], sonst hätt's net g'druckt werde könne.

The second style of orthography is to treat the whole as English and spell the German as well as the English words, after English analogies. This apparently hopeless task,³ was undertaken by Mr. Rauch, who in his weekly newspaper, *Father Abraham*, has weekly furnished a letter from an imaginary Pit i.e. Peter Schweflebbrenner, without any interpretation, and in a spelling "peculiarly his own."⁴ Perhaps some of the popularity of these satirical letters is due, as

¹ South German *letz*, *letsch*, *lätisch*, wrong, left-handed, as in high German *links*, for which Prof. Haldeman refers to Stalder, and to Ziemann, *Mittelhochdeutsches Wörterb.* 217. See also Schmeller, *Bayerisches Wörterb.* 2, 530, "(Mir is *letz*) mir ist nicht recht, d. h. übel." Compare high German *verletzen*, to injure.

² Dr. Mombert considers *gleichen* in this sense of "like, approve of," to be the English word *like* Germanized. But Dr. Stratmann, on seeing the passage, considered the word might be from the old high German *lichen*, to please. This verb, however, was intransitive in all the Germanic dialects, and in old English (see Prol. 777 below: if you liketh, where *you* is of course dative). The present active use seems to be modern English, and I have therefore marked it accordingly.

³ An attempt of Chaucer's scribes to write his language after Norman analogies, as Rapp supposes to have been the case, would have been precisely analogous. Fortunately this was not possible, *suprà* p. 588, n. 4, or we might have never been able to recover his pronunciation.

⁴ In the prospectus of his newspaper, Mr. Rauch says: "So weit das mer wissa, is der Pit Schweflebbrenner der cantsich monn in der United States dærs Pennsylvanish Deitsh recht shreibt un bushtaweert exactly we's g'shwetzt un ous g'shprocha werd," i.e., as far as we know, Pit Schweflebbrenner is the only man in the United States who writes and spells Pennsylvania German correctly, exactly as it is gossiped and pronounced.

some of the fun of Hans Breitmann's Ballads¹ certainly is, to the drollness of the orthography, which however furnishes endless difficulties to one who has not a previous knowledge of the dialect.²

The third orthography would be the usual high German and

¹ Hans Breitmann's "poems are written in the droll broken English (not to be confounded with the Pennsylvania German) spoken by millions—mostly uneducated—Germans in America, immigrants to a great extent from southern Germany. Their English has not yet become a district dialect; and it would even be difficult to fix at present the varieties in which it occurs."—Preface to the 8th edition of Hans Breitmann's Party, with other Ballads, by Charles G. Leland, London, 1869, p. xiii. In fact Mr. Leland has played with his dialect, and in its unfixed condition has made the greatest possible fun out of the confusion of *p* with *b*, *t* with *d*, and *g* with *k*, without stopping to consider whether he was giving an organically correct representation of any one German's pronunciation. He has consequently often written combinations which no German would naturally say, and which few could, even after many trials, succeed in pronouncing, and some which are scarcely attackable by any organs of speech. The book has, therefore, plenty of *vis comica*, but no linguistic value.

² The following inconsistencies pointed out by Prof. S. S. Haldeman, are worth notice, because similar absurdities constantly occur in attempts to reduce our English dialects, or barbaric utterances, to English analogies, by persons who have not fixed upon any phonetic orthography, such as the Glossotype of Chap. VI., § 3, and imagine that the kaleidoscopic character of our own orthography is not a mere "shewing the eyes and grieving the heart." Prof. H. says: "The orthography is bad and inconsistent, sometimes English and sometimes German, so that it requires some knowledge of the dialect, and of English spelling to be able to read it.

"The vowel of *they* occurs in *ferstry*, *meh*, *nay*, *ehns*, *bes* and *base* (= *böse*, angry), *hest* (= *heisst*, called) *ewich*, *dact*, *gea*—*ea* being mostly used (as in *heasa*, *twæa*); but *gedreat* (also *dreet*) rhymes its English form *treat*, and *dreat*, (= *dreht*, turns) with *fate*.

"The German *a* is as in *what* and *fall*, but the former falls into the vowel of *hut*, *but*. *Fall* is represented by *ah* in *betzähla*, and *aa* in *paar*, but usually by *aw* (*au* in *sauga*) as in *aw* (*auch*, also) *g'sawt* (said, gesagt). *Hawa* = *haben*, should have been *haw-wa*. The vowel of *what* is represented by *a* or *o*, as in *was*, *war*, *hab*, *kann*, *donn*, *norra*, *gonga*.

"*O* of *no* occurs in *bohna*, so *amohl*, = *einmal*, *coaxa* (= to coax!) *doch*, *hoar* (= *haar* hair), *woch*, *froke*.

"When German *a* has become English *u* of *but*, it is written *u*, as in *hut* (= *hat*, has), and *a* final, as in *macha*, *denka* = *denken*, [which = (v)], *an* = *ein*.

"The vowel of *field* occurs in *wie*, *shpiela*, *de*, *shees*, *kreya* = (*kriighw*), *y* is used throughout for (*gh*) of *regen*. The *y* of *my* occurs in *sei*, *si*, *my* and *mei*, *bet*, *dyfel*, *subscriba*.

"*W*, when not used as a vowel, has its true German power (*bh*), as in *tswea* = *zwei*, *hawa* = *haben*, *weasht* = *weisst*, *wenich* and *weanich*! = *wenig*, *awer* = *aber*, and some other examples of *b* have this sound.

"*Das* is for *dass* that, and *des* is used for the neuter article *das*. The *s* is hissing (*s*). The *r* is trilled (*r*) as in German. *P* *b*, *t* *d*, *k* *g*, are confused. The lost final *n* is commonly recalled by a nasalised vowel.

"*Oo* in *fool*, *full*, appears in *ün*, when used for *und*, *üf* for *auf*, *wü* = *wo* where, *Zeitung* pure German, *shoola* = schools, *trüvel* = trouble.

"English words mostly remain English in pronunciation, as in: *meeting-house*, *town*, *frolie*, for instance, *horse-race*, *game poker* *shpeela*, *bensa pitcha* = *pitch pence*, *üf course*; but many words are modified when they cross a German characteristic, thus *greenbacks*, the national currency, is rather (*krin-pöks*).

"The vowel of *fat* occurs in *Bärricks* = *Berks county*, *lodwärrick* *lodwärrick* = *latwerge* *electuary*, *kärrich* = *kirche*, *wärrt* = *werth*, *här* = *her*. *-le* is only an English orthography for *el* or *'l*, *sh* is English."

English orthographies for the words used, which would of course convey no information respecting the real state of the dialect. The only proper orthography, the only one from which such information can be derived, is of course phonetic. The kindness of Prof. Haldemann has enabled me to supply this great desideratum.¹ The passage selected is really a puff of a jeweller's shop in Lancaster, Pa., and was chosen because it is short, complete, characteristic, varied, and, being not political, generally intelligible. It is given first in Mr. Rauch's peculiar Anglo-German spelling, and then in Prof. Haldemann's phonetic transcript, afterwards by way of explaining the words, the passage is written out in ordinary High German and English, the English words being italicised, and finally a verbal English translation is furnished. On pp. 661-3 is added a series of notes on the peculiarities of the original, referred to in the first text. The reader will thus be able to form a good idea of the dialect, and those who are acquainted with German and English will thoroughly appreciate the formation of Chaucer's language.

¹ Professor Haldeman not having spoken the dialect naturally for many years, after completing his phonetic transcript, saw Mr. Rauch the author, and ascertained that their pronunciations practically agreed. The phonetic transcript, here furnished, may therefore be relied on. Prof. Haldeman being an accomplished phonetician, and acquainted with my palaeotype, wrote the pronunciation himself in the letters here used. Of course for publication in a newspaper, my palaeotype would not answer, but my glossotype would enable the author to give his Pennsylvania German in an English form and much more intelligibly. Thus the last paragraph in the example, p. 661, would run as follows in glossotype, adopting Prof. Haldeman's pronunciation: "Auer iyh kon der net olläs saughä. Va-rr [vehrr] mai-ner vissä vil, oonn va-rr [vehrr] färrst raiti Krishtaukh sokh vil—dee faaynsti oonn beshti bressents, maukh selverr dorrt ons Tsaums gaiä, oonn siyh selverr sootä. Noh mohrr et press'nt. Peet Shveff'l'brenner." But the proper orthography would be a glossotype upon a German instead of an English basis. The following scheme would most probably answer all purposes. The meaning of the symbols is explained by German examples, unless otherwise marked, and in palaeotype. LONG VOWELS: *ie* lieb (ii), *ee* beet (*ee*), *ae* spräche (ææ), *aa* Aal (aa), *ao* Eng. auel (AA), *oo* Boot (oo), *uh* Pfuhl

(uu), *ue* Uebel (yy), *oe* Oel (œœ). SHORT VOWELS: *i* Sinn (i, i), *e* Bett (e, e), *ä* Eng. bat (æ, æ), *a* all (a), *ä* Eng. what (A o), *o* Motte (o o), *u* Pfund (u, u), *ü* Fülle (y), *ö* Böcke (œ), *ë* eine (ø), Eng. but (ø, ø), (,) sign of nasality. DIPHTHONGS: *ai* Hain (ai), *oi* Eng. joy, Hamburg *Eule* (oi), *au* theoretical *Eule* (ay), *au* kauen (au). CONSONANTS: *j* ja (j), *w* wie (bh), Eng. *w* (w) must be indicated by a change of type, roman to italic, or conversely, *h* heu (h), *p* b (p b), *t* d (t d), *tsch* dsh (tsh dzh), *k* g (k g), *kh* (kh), *f* v (f v), *th* dh (th dh), *ss* Nüsse (s), *s* wiese (z), *sch* sh (sh zh), *ch* gh (kh kh, gh gh), *r* l m n (r l m n), *ng* nk (q qk). German readers would not require to make the distinction *ss*, *s*, except between two vowels, as *Wiesë*, *Nüssë*, *Fuessë*. They would also not find it necessary to distinguish between *e*, *ë* final, or between *er*, *ër*, unaccented. For similar reasons the short vowel signs are allowed a double sense. This style of writing would suit most dialectic German, but if any additional vowels are required *ih*, *eh*, *ah*, *oh*, are available. The last sentence of the following example, omitting the distinction *e*, *ë*, would then run as follows: "Aower ich kon der net olles saoghe. Waer meener wisse wil, un waer ferst reeti Krishtaoch sokh wil,—die fainsti un beshti bressents, maokh selwer dort ons Tsaoms geeë, un sikh selwer suhte. Noo moor et press'nt. Piet Schwefflbrenner."

see. Then are we again once on *business*.

Watches have they there, *first-rate* (ones) for sixteen up-to four hundred (and) fifty dollars. After that wie them once rightly beseen have, is the Barbara to the *conclusion* come, an American *watch* to buy.

There have they also what they Thermometers call—so a thing that to-him shows how cold the weather is, and same thinks me might we use presently. *Anyhow* we have one bought.

The *watch* is also a *first-rate* (one). I was *always* on [all up = entirely of, always of] the opinion that the American *watches* were there-out in Germany made, and but same is not true. And the houseclocks; *Gemini Fires*! but they have *about* beautiful (ones)! *Of course* we have also one bought, for when I once *Post Master* am, must I one have, for into the office hence-in (to) do.

Notes on the above Text.

¹ *Mister* is used as well as the German form (*mechst'r*).—S. S. Haldeman.

² Father Abraham means the late president Abraham Lincoln, assumed as the title of Rauch's newspaper.

³ The guttural omitted, as frequently in *nicht, nichts*.

⁴ The infinitive *-e* for *-en*, as frequently in Chaucer, and commonly now on the Rhine.

⁵ *Einmal*, a common expletive, in which the first syllable, even among more educated German speakers sinks into an indistinct (ə). Observe the transition of (a) into (oo).

⁶ The common change of (b) into (bb).

⁷ Bevv, or Pevvy, is a short form of Barbara, a rather common name in the dialect. Both forms are used in the following specimen.—S.S.H. German Bâbbe, Bâbchen, compare the English Bab, Babbly.

⁸ *Doh* here, *fergonga* recently, an adverb, not for *vergangene Woche*.—S. S. H.

⁹ Observe the frequent change of the German *au*, indisputably (au, *au*) into English (AA), precisely as we find to have occurred in English of the XVIIth century.

¹⁰ The not unfrequent changes of *o* long into (uu) are comparable to similar English changes XVth century.

¹¹ *Onna*, the preposition *an* used as a verb, as in the English expression, "he ups and runs." I take this view because *sind* is an auxiliary and a present tense form, but the adverbial tendency of *onna* (as if *thither*) must nevertheless not be overlooked. A German will sometimes use in English an expression like "*outen* the candle!" rarely heard in English.—S.S.H.

¹² Observe here a German plural termination *s* affixed to an English word.

¹³ *Ecke* being feminine, the correct form is *an der Ecke*, although *-eck* in composition is neuter, as *dreieck*, *viereck*.—S.S.H. In Schmeller's Bayr. Wört. 1, 25, "*das Eck*, eigentlich *Egg*" is recognized as south German. In the following word *fun* for *von*, short *o* becomes (u) or (u).

¹⁴ This change of German *a* to *o* is common, as in (shloof-u) for *schlafen*, (shoof) for *schaf*, etc.—S.S.H. See note 5, and compare this with the change of ags. (*aa*) into South English (*oo*, *oo*), while (*aa*) remained in the North.

¹⁵ This frequent and difficult word has been translated *selbiges* throughout, as the nearest high German word, and *selly*, 9 lines above it, may, in fact, indicate this form. Compare Schmeller's Bayr. Wört. 3, 232, "*Selb* [declinabel] in Schwaben öfter nach erster Declin.-Art (sel'er, e, es), in A. B. lieber nach zweiter [der, die, das (s'l, den s'ln, di s'ln), etc.] gebraucht, statt des hochd. *jener*, e, es, welches unvolksüblich ist. [Für der, die, das *selbs* im hochd. Sinn. d.h. *idem*, *eadem*, *idem*, braucht die Mundart der die, das *nemliche*.] (s'l-as mal, des s'l mal, s'l-malz) jenes Mel, (s'l-ə tsait) zu jener zeit, (s'l-ot-nal(b)m) oder (-bhəg) des[jenigen] wegen."

¹⁶ *Sawgt* = *sagt*, says, *secht* = *sügt*, instead of *sagte*, said, with the Umlaut.—S. S. H. The weak verb has therefore a strong inflection. This distinction is preserved throughout. Compare the common vulgar (and older?) forms *slep*, *sweep*, with the usual *slept*, *wept*, and see *supra* p. 355, art. 54.

¹⁷ *Genunk*, with educed *k*, is common in archaic and provincial German, and Rollenhagen rhymes *jung*, pronounced *junk* dialectically, with *trunk*.—S. S. H. See *supra* p. 192, n. 1.

¹⁸ (Pit) or (Piit) may be used for this short form of *Peter*.—S.S.H. It is the English *Pete*, not a German form as the vowel shews.

¹⁹ Observe the vowel educed by the strong trill of the (r). For convenience (r) has been printed throughout, but the reader must remember that it is always distinctly, and sometimes forcibly, trilled with the tip of the tongue, and never sinks to (ɹ).

²⁰ *Das wann*, that though, as though.—S. S. H. *Gookts das wann*, for *sieht es aus als ob*, it looks as if. See note 36.

²¹ Observe the German infinitive termination *-e* for *-en*, added to a purely English verb.

²² The development of *s* into (sh) is remarkable in high German. It is acknowledged as the proper pronunciation before *t*, *p* at the beginning of a syllable, throughout Germany, even North German actors not venturing to say (st-, sp-) even in Hamburg, as I am informed, the capital of that pronunciation. But in final *-st*, the common (*-sh*t) is looked upon as a vulgarism, even in Saxony.

²³ *Kerls*, may have an English *s*, but the form is often playfully used by good speakers in Germany, and hence may have been imported and not adopted.

²⁴ *Hinnich* for *hinter* has developed a final *-ig*, but this is a German addition.

²⁵ *Gedropt*, the German participial form for *dropped*. So also elsewhere I find *gepunished*, which may be compared with Chaucer's *ypunish'd*, Prol. v. 657.

²⁶ *Orrig*, very, Swiss *arig* (Stalder 1, 110), German *arg*, but not used in a bad sense.—S.S.H. The word *arg* implies cunning and annoyance, but its use as an intensive is comparable to our *horrid*, *awfully*, *dreadfully*, which are frequently used in a good sense, as: *horrid beautiful*, *awfully nice*, *dreadfully crowded*. *Das ist zu arg!* that is too bad, too much! is a common phrase even among educated Germans.

²⁷ *Aw* for German *an* is nasalised, which distinguishes it from the same syllable when used for the German *auch*, also.—S. S. H. This recent evolution of a nasal sound in German, common also in Bavarian, may lead us to understand the comparatively recent nasal vowels in French, *infra* Chap. VIII, § 3.

²⁸ The gender is changed because it refers to a man; so in high German it is not unfrequent to find *Fräulein*, *Mädchen*, although they have a neuter adjective, referred to by a feminine pronoun, as: "*das Fräulein hat ihren Handschuh fallen lassen*," the young lady [neuter] has dropped her [fem.] glove.

²⁹ In an earlier line *g'sea* for *gesehen*, but here we have a double infinitive, as if *zu sehenen*. This is also used for the third person plural of the present

tense, as in *sie gehen-a*, they go.—S.S.H. Compare also *ich hab dich, wohl gesehne*, in the *Gespräch*, p. 654. This seems comparable to what Prof. Child calls the protracted past participle in Chaucer, *suprà* p. 357, art. 61. It is impossible to read the present specimen attentively without being struck by the similarity between this Pennsylvania German and Chaucer's English in the treatment of the final *-e*, *-en* of the older dialects. The form (sel'bher) in the preceding line preserves the *b* in the form (bh). Schmeller also allows *selber* to preserve the *b* as (s'l'bə), see n. 15.

³⁰ *Das eam weist*, that shews him, that shews to one or a person.—S. S. H. *Eam* = *einem*, not *ihm*.

³¹ This *als* is Swiss, which Stalder defines by *ehedem* hitherto and *immer* always, compare ags. *eal-enge* altogether and *eal-wig* always.—S.S.H. See also Schmeller Bayr.-Wört. 1, 50. Dr. Mombert takes *als* to be an obsolete high German contraction of *alles* in the sense of ever, mostly, usually.

³² Prof. Haldeman takes *uf* for *auf*, but *der Meinung*, and not *auf der Meinung*, is the German phrase, and hence the word may be English, as afterwards, *uf course*. But this is hazardous, as *uf* in this sense could hardly be joined with a German dative *der Meinung*. Can *als uf* be a dialectic expression for *alles auf*, literally *all up*, that is, entirely? Compare, Schmeller, Bayr. Wört. 1, 31, "*auf und auf*, von unten (ganz, ohne Unterbrechung) bis oben, *auf und nider* vom Kopf bis zum Fuss, ganz und gar."

³³ *Cheemany* is the English exclamation *Oh jeemany*.—S.S.H. The English is apparently a corruption of: *Oh Jesus mihi*, and has nothing to do with the *Gemini*. But what is the last part of this exclamation: *fires*? Prof. Haldeman, suggests, *hell fires*! Dr. Mombert derives from the shout of: *fire*! Can the near resemblance in sound between *cheemany* and *chimney*, have suggested the following *fires*? Such things happen.

³⁴ *For in de office ni du* seems to stand for *um in die office hinein zu thun*. The use of *for* for *um* is a mere Anglicism, but why is *zu* omitted before *thun*? By a misprint, or dialectically for euphony?

It is required both by the German and English idiom. Dr. Mombert considers the omission of *zu* dialectic in this place, elsewhere we find *zu do*.

³⁵ *Boll amohl*, bald einmal, pretty soon, shortly. This use of *einmal* once, appears in the English of Germans, as in: "Bring now here the pen once."—S.S.H.

³⁶ *Das*. This is not the neuter nominative article *das*, which is *des* in this dialect, but a contraction of *als dass*, with the most important part, *als*, omitted.—S.S.H. I am inclined to take it for *dass* used for *als*, as in the former phrase *das wann* = *als ob*, see note 20. According to Schmeller, Bayr. Wört. 1, 400 "*dass* schliesst sich als allgemeinste conjunction, in der Rede des Volkes, gern andern conjunctionen erklärend an, oder vertritt deren Stelle."

³⁷ *Watch-ketta*, a half English, half German compound, is comparable to Chaucer's *footmantel*, half English and half French, in Prol. *infrà*, v. 472, and *suprà* p. 651, l. 6.

³⁸ This may be the English *any*, like the German *einig*, treated like *einiger*, or it may be a legitimate development of this, as *eins* is *eens*.—S.S.H. The latter hypothesis seems the more probable, and then the English signification may have been attached to the German word from similarity of sound. Dr. Mombert thinks the word may be either *any* treated as a German word, or *irgend einer* corrupted. Observe the frequent use of (ee) for (ai) as *eens* for *eins*. The transitions of (au) into (aa), (ai) into (ee), (aa) into (oo), and occasionally (o) in (u), are all noteworthy in connection with similar changes in English.

³⁹ *Meaner* for *mehr* is obscure. Compare Schmeller, Bayr. Wört. 2, 581; "*manig*, Schwab. *menig*, *meng*, a) wie hochd. manch . . . Comparativisch steht in Amberg. Akten v. 1365 "*An ainem stuck oder an mengern*." . . . Sonst hört man im b. W. wie in Schwaben einfacher den Comparativ *mener*, *mehr*, welcher eher aus (mee, me) als aus *menger* entsteht scheint; oder sollte es noch unmittelbar zum alten *mana-* gehören?"

F. W. GESENIUS ON THE LANGUAGE OF CHAUCER.

Two German scholars, Professors Gesenius and Rapp, have published special studies on the language and pronunciation of Chaucer, of which it is now necessary to give an account. The following is a condensed abstract of the treatise entitled: *De Lingua Chauceri commentationem grammaticam scripsit Fridericus Guilelmus Gesenius, Bonnac, 1847, 8vo. pp. 87.* The writer (who must not be confounded with the late Prof. Wilhelm Gesenius, of Halle, the celebrated Hebraist,) used Tyrwhitt's text of the *Canterbury Tales*, according to the 1843 reprint. In the present abstract Wright's spelling and references to his ed. of *Harl. MS. 7334* (which have all been verified) are substituted, and much relating to the peculiarities of Tyrwhitt's text is omitted; inserted remarks are bracketed. Gesenius's ags. orthography has been retained.

PART I. THE LETTERS.

Chaucer seems to add or omit a final *e* at pleasure, both in ags. and fr. words, as was necessary to the metre; and he used fr. words either with the fr. accent on the last syllable or with the present English accent, for the same reason.

Chap. 1. Vowels derived from Anglo-Saxon.

Short vowels are followed by two consonants, or by either one or two in monosyllables, and long vowels have a single consonant followed by *e* final.

I. Ags. short *a* is preserved in: land 402, hand 401, bigan 5767, ran 4103, drank 6044, thanked 927; but fluctuates often between *a* and *o*, as: londes 14, hond 108, outsprong 13526, bygon 7142, nat 2247, drank 13970, i-thanked 7700 [in the three last cases, Tyrwhitt has *o*].

Short *a* answers to ags. *ā*, according to Grimm's separation *ā* = goth. *a*, and æ = gothic *ē*, as: what, that pron., ags. hvät pät; atte. ags. at 29; glas 152, have ags. habban, etc.

Short *a* also answers to ags. *ǣa*, as in: alle ags. ěall 10, scharpe ags. scēarp 114, halle 372, barme 10945, starf 935, 4703, halpe [Tyrwhitt, *halp* Wright] 5340, karf 9647, hals 4493.

Long *a* is either a preserved ags. *a* long, or a produced ags. *a* short, as: make ags. macjan 4763, name, fare 7016, ham, ags. hām 4030. That this last word was pronounced differently to the others, which probably even then inclined to *ā* (ÆE), is shewn by its interchange with *home*, whereas *a* always remains in *make*, *name*, etc.

Long *a* also arises from ags. *ā* short, as: smale ags. smāl 9, bar 620; fadur 100, blake 2980, this last vowel is sometimes short as 629.

Long *a* like short *a* also arises from ags. *ēa*, as: gaf. ags. gēaf 177, mary, ags. mēarh 382, jape ags. gēap 4341, ale 3820, gate 1895, care, etc.

II. Chaucer's *e* replaces several distinct ags. vowels.

Short *e* stands

for ags. *e* short, in: ende 15, wende 16, bedde, selle 3819, etc.

for ags. *i*, *y*, in: cherche (Wr. chirche), ags. circe 4987; selle ags. syl, threshold, 3820, rhyming with selle, ags. sylle; scheeld ags. scyld 2895, rhyming with heeld, ags. hēold, kesse ags. cyssan 8933; stenten, ags. stintan 906; geven, ags. gifan, gyfan 917, etc. These forms are only found when wanted for the rhyme, and *i* is the more common vowel.

for ags. *ēa*, *ed* in: erme, ags. ěarmjan 13727; erthe, ags. ěard, ěorðe 1898; ers, ags. ěars 7272; derne, ags. dēarn 3200, 3297; berd 272; est, ags. ěast 1905.

for ags. *ēo* in: sterres, ags. stēorra 270; cherles ags. cēorl, ger. kerl, 7788; yerne ags. gēorne, ger. gern, 6575; lerne, ags. lēornjan, 310; swerd 112, werk 481, derkest 4724; yelwe, ags. gēolu 677.

Long *e* stands

for ags. short *e* in: ere, ags. erjan 888; queen, ags. cven 870, etc.

for ags. long *e*, more frequently, in: seke, ags. sēcan 13; kene 104, grene 103, swete 5, mete 1902, wepyng 2831, deme 1883.

for ags. *ae* long: heres, ags. haer 557; breede, 1972; lere, ags. laeran 6491; see 59, yaer 82, reed 8527, slepen 10, cleue 369, speche 309, strete 3823, etc.

for ags. *eo* as in: seke, ags. sēc 18, as well as: sike, ags. sioca 246, these diphthongs *eo*, *io*, had probably a similar pronunciation and are hence frequently confused, so *hēofon*, *hiofon*, and *hēōð*, *hiōð*; scheene, ags. scēōnē, beautiful, 1070; leef 1839, theef 3937; tene, ags. tēōna, grief, 3108; deepe 129, chese 6480, tree 9337, tre 6341, prostes 164, prest 503, etc.

for ags. *ea* and *ei* in: eek 5, gret 84, beteth 11078, neede 306, reede 1971, bene 9728, chepe 5850, deaf 448, stremes 1497, teeres 2829, eet 13925, mere 544.

Nothing certain can be concluded concerning the pronunciation of these *e*'s, which arose from so many sources. They all rhyme, and may have been the same. In modern spelling the *e* is now doubled, or more frequently reverts to *ea*.

III. The vowel *i* has generally remained unchanged at all periods of the language. Mention has already been made of its interchange with *e* where the ags. *y* was the mutate of *u* or *eo*, *io*, thus: fist 6217, fest 14217, ags. fyst; mylle 4113, melle 3921, ags. myll; fel 5090, fille 10883, ags. fēol; develes 7276, devyl 3901 [*diuel* Tyrwhitt, *deuel* Heng. and Corp.], ags. diouful. The *i* generally replaces ags. *y*, and *e* replaces ags. *eo*. Long *i* similarly replaces long ags. *y*, as occasionally in ags. Short ags. *i* seems to have been lengthened before *ld*, *nd*, [no reasons are adduced,] as in: wyld 2311, dhyld 2312, fynde 2415, bynde 2416. Undoubtedly this long *i* was then pronounced as now, namely as German *ei* (ai). [Pronunciatio longæ vocalis *i* sine dubio iam id ætatis eadem fuit quam nunc, id est *ei*.] In the contracted forms *fiut*, *grint* for *findeth*, *grindeth*, there was therefore a change of vowel, *fiut* having the German short *i*, and *findeth* German *ei*. [No reasons adduced.]

IV. Short *o* stands

for ags. short *o* in: wolde 651, god 1264.

for ags. short *u*: somer ags. sumer 396; wonne ags. wunnen 51; nonne 118, sonne 7, domb 776, dong 532, sondry, ags. sunder, 14, 25. Nearly

all these words are now written with *u*, and preserve Chaucer's pronunciation, for *summer* is written, but *sommer* spoken [*i.e.* Gesenius did not distinguish the sounds (*u*, *o*).]

for ags. short *a*, as already observed, and *o* is generally preferred before *nd*, and remains in Scotch and some northern dialects.

Long *o* stands

for ags. long *o* in: bookes, ags. bōc, 1200; stooden 8981, stood 5435, took 4430, foot 10219, some 5023, sothely 117, etc.

for ags. long *a* in: wo, ags. vā 8015, moo 111, owne, ags. āgen 338, homly 7425, on 31, goost 205, hoot 396, ooth 120, loth 488. In such words *a* is uncommon, the sole example noted being *ham* 4030. Both *o*'s rhyme together and were therefore pronounced alike. At present the first is *u* and the second *o*.

for ags. short *u* in: sone 79; wone, ags. vunjan 337, groneth 7411.

V. Short *u* stands for ags. short *u* in: ful, ags. full 90, lust 192, but 142, cursyng 663, uppon 700, suster 873, *shulde* probably arose from some form *sculde*, not *sceolde*, as we have no other instance of ags. *eo* becoming short *u*. There is no long *u* in Chaucer.

VI. The vowel *y* is occasionally put for *i*.

VII. The diphthong *ay* or *ai* stands for ags. *ūg* in: day, ags. dag 19, weie 793, lay 20, mayde 69, sayde 70, faire 94, tayl 3876, nayles 2143, pleye 236, reyn 592, i-freynd, ags. frāgnan 12361. These examples shew that *ey* was occasionally written for *ay*, and hence that *ey*, *ay* must have been pronounced alike.

VIII. The diphthong *ey* or *ei* arose from ags. *ei* as in: agein, ags. ageān 8642, or from *eig* as: eyen, ags. eāge 152, deye, ags. deāgan 6802, [*mori*, is there such a word in ags. ? it is not in Bosworth or Ettmüller; Orrmin has *dezenn*, suprā p. 284. There is a *deagan* tingere.] The change in these two last words may be conceived thus: first *g* is added to *ei*, then replaced by *j* (*r*) and finally vanishes, as *eige*, *eijr*, *eis* or *eye*. From *eah* comes *eigh*, as *ēah̄ta*, *hēdh*, *neah*, *sleah̄*, which give eyght, heygh, neygh, sleigh. This orthography is however rare, and *highe*, *nighe*, *slighe*, or *hie nie slie*, without *gh*, which was probably not pronounced at that time, are more common. The

word *eight* explains the origin of *night*, *might*, etc., from ags. *nēaht*, *mēaht*, which were probably first written *neight*, *meight*, and then dropped the *i*. [There is no historical ground for this supposition.]

IX. The diphthong *ou*, or *ow* at the end of words or before *e*, answers to ags. long *u* (as the German *au* to medieval German *û*), in: bour, ags. *bûr* 15153, oure 34, schowres 1, toun, ags. *tûn* 217; rouned, ags. *rûn* 7132, doun, ags. *dûn* 954; hous 252, oule 6663, bouk, ags. *bûce*, Germ. *bauch*, 2748, souked 8326, brouke, ags. *brûcan*, use, 10182, etc. In many of these words *ow* is now written.

Before *ld* and *nd*, *ou* stands sometimes for ags. short *u*. Before *gh*, *ou* arises from ags. long *o*, and answers to middle German *uo*, as: inough, ags. *genûg*, mhg. *genuoc* 375; rought, ags. *rôhte* 8561, 3770, for which *au* is sometimes found, compare *sale* 4185, *sowle* 4261.

Finally *ou* sometimes arises from ags. *ëov*, as in: foure, ags. *fëöver* 210; trouthe, ags. *trëövth*, 46, etc.

X. The diphthong *eu*, *ew*, will be treated under *w*.

Chap. 2. Consonants derived from Anglosaxon.

I. Liquids *l*, *m*, *n*, *r*.

L is usually single at the end of words, though often doubled, as it is medially between a short and any vowel, but between a long vowel and a consonant it remains single.

The metathesis of *R* which occurs euphonically in ags., is only found in: briddes 2931, 10925; thrid 2273, threttene 7841, thritty 14437; thurgh 2619. But as these words have regained their primitive forms *bird*, *third*, *through*, we perceive that the metathesis was accidental. In other words the transposed ags. form disappears in Chaucer, thus: gothic *rinnan*, ags. *irnan*, Chaucer *renne* 3888; frankic *drëscan*, ags. *përscan*, Ch. *threisshe* 538, *threissfold* 3482 ags. *përsevold*, *përsevold*; frank. *përstan*, ags. *bërstan*, Ch. *berst* [Harleian and Lansdowne *bresten* Ellesmere and Hengwurt, and Corpus, *brestyn* Cambridge.] 1982; goth. *brinnan*, ags. *birnan*, Ch. *bren* 2333; modern *run*, [urn in Devonshire], *thrash*, but *burn burst*.

II. Labials *b*, *p*, *f*, *w*.

B is added euphonically to final *m* in

lamb 4879, but not always, as *lymes* 4881, now *limbs*.

P is used for *b* in *nempen* 4927.

F, which between two vowels was *v* in ags., is lost in *heed* 109, ags. *hedfod*, *hedvod*. There seems to be a similar elision of *f* from ags. *efenford* in *enforce* 2237 [emforth Ellesmere, Hengwrt, Corpus, *enforfe* Cambridge, *hensforth* Petworth, *enforfe* Lansdowne], compare *han* for *haven* 754, 1048, etc. *F* is generally final, as: wif 447, lyf 2259, gaf 1902, haf 2430, stryf 1836 knyf 3958, more rarely medial, [the instances cited have final *f* in Wright], where it is generally replaced by *v*, not found ags., as: wyve 1862, lyves 1720, geven 917, heven 2441, steven, ags. *stëfen* 10464; havenes 409.

V is never used finally, but is replaced by *w*, followed sometimes by *e*, as: sawgh 2019, draw 2549, now 2266, sowe 2021, lowe 2026, knew 2070, blew 10093, fewe 2107, newe 17291, trewe 17292. In the middle of a word *aw*, *ow* are replaced by *au*, *ou*, but before *v*, *w* is retained, as: howve 3909, schowve 3910.

W arises from ags. *g*, as in: lawe, ags. *lagu* 311; dawes, ags. *däg*, 11492, and as *day* is more common for the last, we also find *lay* for the first, 4796. Compare also *fawe* ags. *fagen* 5802 rhyming with *lawe*, i-slave 945, for *fain*, *slain*. *W* also replaces *g* in: sawe 1528, 6241, mawe 4906, waves 1960, sorw 10736, morwe 2493, borwe 10910, herberw 4143, herbergh 767, 11347.

III. Linguals *d*, *t*, *th*, *s*.

The rule of doubling medial consonants is neglected if *D* stands for ags. *ð*, as: thider 4564, whider 6968, gaderd, togeder, etc., in the preterite *dide* 3421, 7073, 8739, and *hade* 556, 619, [Ellesmere and a few MSS. where it seems to have been an accommodation to the rhymes *spade*, *blade*.] Similarly i-written 161, i-write 5086, although the vowel was short in ags. [It is lengthened by Bullokar in the xvth century. p. 114, l. 7.] Perhaps *litel* has a long *i* in Chaucer's time, see 87, 5254.

S final is often single, as: blis 4842, glas 152, amys 17210.)

The termination *es* in some adverbs is now *ce*, as: oones 3470, twyes 4346, thries 63, hennes hens 10972, 14102, henen 4031 [in Tyrwhitt, *heythen* Ellesmere, *heithen* Corpus, no corresponding word in Harleian], *henne*

2358; thennes 5463, 4930, thenno 6723; whennes 12175.

The aspirate *TH* had a double character þ ð in ags., and a double sound, which probably prevailed in Chaucer's time, although scarcely recognized in writing. That *th* was used in both senses we see from: breeth, ags. bræð 5; heeth, ags. hæð 6; fetheres, ags. feðer 107; forth, ags. forð 976; walketh 1054, etc.; that, ags. þæt 10—ther 43, thanked 927. The use of medial and final *d* for *th* are traces of ð, as: mayde, ags. maegð 69; quod, ags. cvað 909; wheder ags. hvæðre 4714 [*whether*, Wright]; cowde ags. cuð 94; *whether* and *coupe* are also found. Again, we also find [in some MSS.] the ags. *d* replaced by *th*, in: father 7937, gather 1055, wether, 10366, mother 5433, [in all these cases Wright's edition has *d*]. But *t* on the other hand is never put for ags. þ.

The relation of *th*, *s*, is shewn by their flexional interchange in *-eth*, *-es*. The elision of *th* gives *wher* 7032, 10892.

IV. Gutturals, *c*, *k*, *ch*, *g*, *h*, *j*, *q*, *x*.

K is used before *e*, *i*, and *c* before *a*, *o*, *u*, hence kerver 1801, kerveth 17272, but: carf 100. Medial ags. *co* becomes *ck* or *kk*, as nekke, ags. hnecca 238; thikke, ags. picca 551; lakketh 2282, lokkes 679. Modern *ck* after a short vowel is sometimes *k*, as: seke 18, blake 2980.

Grimm lays down the rule that *c*, *k* fall into *ch* before *e*, *i* except when these vowels are the mutates of *a*, *o*, *u*, in which cases *k* remains, (Gram. 1², 515.) *cch* has arisen from ags. *co* in the same way as *kk*, as: wrecche, ags. vraecca 11332 fecche, ags. fēcēan 6942; cacche Mel., Strecche, recche, etc. Probably the pronunciation was as the present *tch*.

K was ejected from *made*, though the form *maked* remains 2526. In *reule* 173, if it is not derived from the French, the *g* of ags. *regul*, *regol*, has been ejected.

G was probably always hard, and so may have been *gg*, in: brigge, ags. brycg 3920; eggyng ags. ecg, 10009; hegge, ags. hecg 16704. From this certainly did not much differ that *gg* which both in Chaucer and afterwards passed into *g*, as: ligge, lye ags. lecgan, 2207; legge, ags. lecgan, 3935; abegge, abeye, ags. byegan 3936.

The *g* and *y* were often interchanged, as give yeve, forgete, forgate, gate yate, ayen agen, etc. The *y* replaced guttural *g* [due to editor] as in: yere, yongo, yerne, ey; and also in words and adjectives where *y* arises from *ig*, as: peny, very, mery, etc., and in the prefix *y* or *i* for ags. *ge*, as: ylike, ynough, ywis, ymade, yslain, ywriten, ysene, ysowe 5653. And *g* we have seen is also interchanged with *w*.

The hard sound of ags. *h* is evident from the change of *nih*t, *leoht*, *fliht*, *riht*, etc., into *night*, *light*, *flight*, *wight*, etc.

Ags. *sc* had always changed into *sh*, German *sch*. In some words *ssh* replaces *sh* as: fresshe, ags. frēsc 90, wessch 2285, wissch 4873, asschy 2885. There is also the metathesis *cs* or *x* for *sc* in *aze*.

Chap. 3. Vowel mutation, apocope, and junction of the negative particle.

I. There is no proper vowel mutation (*umlaut*), but both the non-mutate and mutate forms, and sometimes one or the other, are occasionally preserved, as: sote 1, swete 5; grove 1637, greves 1497, 1643 to rhyme with *loves*; welken 9000, ags. wolcen, Germ. wolke; the comparatives and superlatives, *lenger*, *strenger*, *weret*, and plurals, *men*, *feet*, *gees*.

II. Apocope; *lite*, *fro*, *mo*, *tho* = *than*.

III. Negative junction; before a vowel: *non* = *ne on*, *nother*, *neithir* = *ne other*, *ne either*, *nis* = *ne is*, *nam* = *ne am*; before *h* or *w*: *nad* = *ne had*, 10212, *nath* = *ne hath* 925, *nil* = *ne will* 8522, *noide* = *ne wolde* 552, *neve* = *ne were* 877, *not* = *ne wot* 286, *mysten* = *ne wysten* 10948.

Chap. 4. Vowels derived from the French.

French words with unaltered spelling were probably introduced by Chaucer himself, and the others had been previously received and changed by popular use.

I. The vowel *a* in unaccented syllables had probably even then approximated to *e*, and hence these two vowels are often confounded. Thus Chaucer's *a* replaces fr. *e*, *ai*, and again Ch. *e* replaces fr. *a*, thus: *vasselage* [see *vasselage*, p. 642, col. 2, and *wassayllage*, p. 645], fr. *vasselage* 3056, *vilanye* [see *villany*, p. 642, col. 2, and *courtesy*, p. 644, col. 1], fr. *vilenie*, *vilainie*,

728; *companye*, fr. *compaignie* 4554, *chesteyn* [*chasteyn*, *chestayn*, in MSS., see p. 642.] fr. *chastaigne* 2924.

With the interchange of the ags. vowels *a*, *o*, we may compare the change of fr. *a*, *au*, the latter having probably a rough sound as of *ao* united, which took place before *uo*, *us*, *ng*, *nd*, *nt* in both languages, but *au* was more frequent in Chaucer and *a* in French, as: *grevance* 11253, *grevance* 15999, and other *ance* and *ant* terminations, also: *romauns*, fr. *romance* 15305; *enhansen*, fr. *enhanser* 1436; *straunge* fr. *estrange* 10590, 10403, 10381; *demaundes*, fr. *demande* 8224; *launde* fr. *lande*, uncultivated district, 1693, 1698; *tyraunt*, fr. *tirant* 9863, *tyrant* 15589; *graunted* 6478, 6595; *haunt* fr. *hante* 449. With the exception of the last word all these have now *a*.

II. Long *e* frequently arises from French *ai*, as in: *plesaunce*, fr. *plaisance* 2487; *appese*, fr. *paisier* 8309; *freelte*, fr. *fraillete*; *peere*, fr. *paire* 15540. Sometimes it replaces *ie*, as: *nece*, fr. *niez* 14511; *sege* 939, *siege* 56; and the *e* is even short in: *cherte*, fr. *chiereté* 11193. Similarly fr. *i* is omitted in the infinitive termination *ier*, compare *arace*, *creance*, *darreine*, *auter*, etc., in the list of obsolete fr. words.

Long *e* also replaces fr. *eu* in: *peple* 2662 [the word is omitted in Harl., other MSS. have *peple*, *poeppe*, *puple*], *mebles* [*moebles* Harl.] 9188. To this we should refer: *reproef* 5598, *ypreued* [*proved* Harl., *proeued* Hengwrt] 487.

III. That the pronunciation of *i* fluctuated between *i* and *e* we see by the frequent interchange of these letters; the fr. shews *e* for *it*, *i*, as: *devine* 122, *divyn* 15543, *divide* 15676, *divided* 15720 [Tyr. has *devide* in the first case], *enformed* 10649, fr. *informier*, *cnformer*; *defame* 8416, *difame* 8606; *surquidrie* *surquedrie*, *chivachee* *chevachie*, see obsolete fr. words below.

IV. Chaucer frequently writes *o* for fr. *ou* in accented syllables, as: *covercheffes* [most MSS., *kevercheffes* Harl.] fr. *couvrechief* 455; *corone*, fr. *couronne* 2292; *bocler*, fr. *boucler* 4017; *governance*, fr. *gouvernance* 10625; *sovereyn*, fr. *souverain* 67. More rarely *ch. u* = fr. *ou*, as: *turne* [most MSS., *tourne* Harl.], fr. *tourner* 2456; *cutesye*, fr. *courtioisie* 15982.

V. Fr. *o* is often replaced by Ch. *u*,

as: *turment* [*torment* Harl.], fr. *tormente* 5265; *abundauntly*, fr. *habondant* 5290; *purveane*, fr. *perveance*, *pourveance* 1667; in *assuage* 11147, fr. *assoager*, *assouager*, the *u* had certainly the sound of *w*, compare *aswage* 16130.

For long *u* we occasionally find *ew*, which was certainly pronounced as in the present *few*, *dew*, thus: *salweth* [Harl. and the six MSS. read *salweth*] 1494, *transmewed* [*translated* Harl., *transmueyde* Univ. Cam. Dd. 4, 24] 826 *mewe*, fr. *mue* 351 [*muwe* Ellesmere and Hengwrt MSS.], *jewishe*, fr. *juise* [*juwyse* Harl. and most MSS., *swes* Petworth, *iwyse* Lansd.] 1741.

VI. The vowels *y* and *i* are interchanged in fr. as in ags. words.

VII. The fr. diphthongs *ai*, *oi*, usually appear as *ei* in Chaucer, and must have been pronounced identically, as: *seynte*, fr. *saint* 511; *doseyn*, fr. *dosaine* 586; *chesteyn*, fr. *chastaigne* 2924; *peyneth*, fr. *painer*, *peiner* 4740; *coveitous*, fr. *covoiteux*, *Mal*. These diphthongs interchange in Ch. as well as in fr. [different MSS. differ so much that Gesenius's references to Tyrwhitt's edition on this point are worthless]. For the interchange of *a* and *ai* see I.

VIII. When the diphthong *ou* arose from fr. *o*, it was perhaps pronounced as long *o*. This is very probable in those words which now contain *o* or *u* in place of the diphthong, but less so in those which have preserved *ou*; as these had even then perhaps the sound of German *au*. Ex. *noumbre* 5607; *facound*, fr. *faconde* 13465, *soun*, fr. *son* 2434; *abounde* fr. *habonder* 16234. [The other examples have *o* in Wright's ed., or like *flour* 4 are not to the point; the above are now all nasal *on*.]

Chap. 5. Consonants derived from the French.

The doubling of final consonants is frequently neglected.

I. Liquids.

[The examples of doubling *l*, *r*, are so different in Wright's ed. that they cannot be cited.]

P inserted: *dampned* 5530, *dampnacioun* 6649; *sompne* 6929 = *somone* 7159, *sompnour* 6909, *solempne* 269. This *p* is also often found in old fr. Similarly in Provençal *dampna*, *sompnar*, Diez. Gram. 1, 190 (ed. 1.).

II. Labials.

P for b; gipser, fr. gibecier 359; capul, fr. cabal 7732. The letter *v*, which was adopted from the romance languages into English, had no doubt the same sound as at present, that is, it was the German *w*, and the *w* was the German *u*. [That is, Ges. confuses (*v*, *w*) with (*bh*, *u*) in common with most Germans.]

As in ags. *g* passes into German *w*, so in fr. words initial *w* becomes *g* or *gu*. Whether this change was made in English by the analogy of the ags. elements or from some other dialect of old fr., in which probably both forms were in use, it is difficult to determine. The following are examples: wiket, fr. guichet 10026; awayt, fr. aguet 7239; wardrobe, fr. garderober 14983. To these appear to belong *warice* and *wastear*, though they may derive from the frankic *warjan* *wastan*.

III. Linguals.

Z is an additional letter, but is seldom used, as *lazer* 242. Ch. generally writes *s* for *z*.

IV. Gutturals.

C before *e*, *i* was probably *s* as now. Fr. *gn* now pronounced as German *ni*, (*ni*) is reduced to *n* in Ch., as Coloyne 468, feyne 738, barreine, essoine, oinment. *G* was doubled after short vowels in imitation of ags.

The aspirate *h*, which seems to have come from external sources into English, and was scarcely heard in speech, was acknowledged by Ch., but has now disappeared, as: abhominaciouns 4508. In *proheme* 7919, the *h* seems only inserted as a diæresis.

Fr. *qu* before *e* and *i* is often changed into *k*, as: phisik 913, magik 418, practike 5769, eliket 10025.

Chap. 6. *Aphæresis of unaccented French e, a.*

Initial *e* is frequently omitted before *st*, *sp*, *so*, as: stabled, fr. établir 2997; spices, fr. espece 3015; specially 14, squyer, fr. escuyer 79, scolier, fr. escolier 262; straunge, fr. estrange 13. Similarly *a*, *e*, are rejected in other words where they are now received, as: potecary 14267, compare Italian *bottega* a shop; prentis 14711, pistil 9030, compare Italian *pistola*, *chiesa*. The initial *a* in *avyssioun* 16600, has been subsequently rejected.

Appendix.

I. *Obsolete Chaucerian words of Anglo-Saxon origin.*

[All Gesenius's words are inserted, though some of them are still in frequent use, at least provincially, or have been recently revived. To all such words I have prefixed †. The italic word is Chaucer's, the roman word is ags., meanings and observations are in brackets. Gesenius seems to have simply extracted this list from Tyrwhitt's Glossary without verification, as he has occasionally given a reference as if to Cant. Tales, which belongs to Rom. of Rose. The Mel. and Pers. T. refer to the tales of Melibeus and the Persoun, without any precise indication, as editions differ so much.]

M. RAPP ON THE PRONUNCIATION OF CHAUCER.

Dr. Moritz Rapp, at the conclusion of his *Vergleichende Grammatik*, vol. 3, pp. 166-179, has given his opinion concerning the pronunciation of Chaucer, chiefly on *a priori* grounds, using Wright's edition, and has appended a phonetic transcription of the opening lines of the Canterbury Tales as a specimen. This account is here annexed, slightly abridged, with the phonetic spelling transliterated into palaeotype, preserving all the peculiarities of the original, such as absence of accent mark, duplication of consonants, German (bh) for (w), modern English errors of pronunciation, etc. A few remarks are added in brackets.

The liquids are to be pronounced as written, and hence *l* is not mute, though there is a trace of its disappearance in the form (*haf*) for (*half*). The transposition of *r* is not complete; we again find (*renne*) for (*irnan*), and (*brenne*) for (*birnan*), English (*rann*, *börn*), (*thurkh*) through is unchanged, (*bird*) and (*brid*) are both used, (*threshe*) replaces (*therskan*), and (*breste*) replaces (*berstan*), English (*berst*).

Among the labials, *b* remains after *m* in (*lamb*), but (*limm*) is without the present mute *b*. For (*nemnan*) we have the peculiar (*nempnen*), and similarly (*dampnen*) to *damn*. Final *f* as in (*bhiif*) wife, is also written medially *wive*, that is, in the French fashion, because *v* tended towards *f* in the middle ages. But initially, in order to preserve the pure German (bh), recourse was had to the reduplication *uu* or *w*. On *w* after a vowel see below. (Bh) sometimes arises from a guttural, as *sorwe*, that is, (*sorbhe*) now *sorrow* = (*sorwo*), from *sorg*.

Among the dentals *d* and *t* occasion no difficulty, and *s* has, by French influence, become pure (*s*), [Dr. Rapp holds it to have been (*sj*) in ags.] especially as it sometimes results from *p*. The *z* is merely an *s*. The most difficult point is *th*. In ags., we have shewn [suprà p. 555, note] that it had only one value (*th*). I consider that this is also the case for this dialect. As regards the initial sound, which in the English pronouns is (*dh*), there is not only no proof of this softening, but the contrary results from v. 12589

So faren we, if I schal say the sothe.

Now, quod oure ost, yit let me talke to the.

The form *sothe* has here assumed a false French *e*, since the ags. is (*sooth*)

and English (*sooth*), [it may be the adverbial *e*, or the definite *e*, according as *the* is taken as the pronoun or the definite article,] which must therefore have here been called (*soothe*), as this *th* is always hard, and as *to the*, i.e. (*too thee*) rhymes with it, shewing that the *e* of *sothe* was audible if not long, and that the *th* of *to the* was necessarily hard, as the English (*tuu dhii*) would have been no rhyme, [but see suprà p. 318]. Similar rhymes are (*aluu thee*) allow thee, and (*sunthe*) youth, (*hiu thee*) hie thee, and (*sbhiithe*) quickly, [suprà pp. 318, 444, n. 2]. The Anglosaxon value of the letters must be presumed until there is an evident sign of some change having occurred. For the medial English *th* we have a distinct testimony that the Icelandic and Danish softening of *d* into (*dh*) had not yet occurred, for the best MSS. retain the ags. *d*, thus: ags. (*fæder*) here (*fader*), now (*faadher*), (*gæderran*) here (*gader*) now (*gedhdher*), (*togædere*) here (*togeder*) now (*togedhdher*), (*hæder*) here (*bhæder*) now (*uedhdher*), weather, (*moodor*) here (*mooder*) now (*mæhdher*) mother, (*khbhider*) here (*khbhider*) now (*huidhdher*) whither, (*thider*) here (*thider*) now (*dhidhdher*) thither. Inferior MS. have *father*, *gather*, *thither*, etc., shewing that the softening of *d* into the Danish (*dh*) began soon after Chaucer. But when we find the *d* in Chaucer it follows as a matter of course that the genuine old *p* (*th*) as in (*broother*, *fether*) when here written *brother*, *fether*, could only have had the sound (*th*), and could not have been pronounced like the (*bræhdher*, *fæhdher*). The ags. *kunpe* is here (*kuth*) and also (*kud*) or (*kund*) for (*kun-de*.)

Among the gutturals, *k* is written for *c* when *e* or *i* follows, and before

n as (kⁿeu) knew. The reduplicated form is *ck*. The *g* is pure (*g*) in the German words, but in French words the syllables *ge*, *gi*, have the Provençal sounds (dzhe, dzhi), which is certainly beyond the known range of Norman or old French, where *g* is resolved into simple (zh), but here *gentil* is still (dzhentil) not (zhentil). Similarly romanic *ch* is (tsh), and this value is applied to old naturalised words, in which the hiss has arisen from *k*, as (tshertsh) from (kirk), (tsh^{ee}p) from (keapjan) cheapen, and in thoroughly German words (tshild from (kild) child; and (s^{ee}lk) becomes (s^{ee}tsh) each. Reduplication is expressed by *ck*, representing the sharpened (tsh) [i.e. which shortens the preceding vowel] so that (bhrækkæ) exile becomes *wreckhe*, and sometimes *wretch*, which can only mean (bhræts^h); similarly from (fekkan) comes (fetshe) and in the same way (retshe, stretshe) and the obscure *cacche* = (katshe), which comes from the Norman *cachier*, although (tahase) also occurs from the French *chasser*. The reduplicated *g* occasions some difficulty. In French words *abbregier* can only give *abregge* = (abredzhe), and *loger* gives (lodzhe), etc., but the hiss is not so certain in *brgge* bridge, *egge* edge, point, *hegge* hedge, as now prevalent, because we find also *ligge* and *lie* from (liggan) now (lai), *legge* and (lexie) from (leggan) now (lee), and (abaxie) from (byggan) now (bai). Similarly (begge) ask, beg, now (beg), which, as I believe, was formed from (bungan) or (begean) to bow. Here we find modern (dzh) and hence the (dzh) of the former cases is doubtful.

The softening of *g* into (*j*) is a slighter difference. The letter (*j*) does not occur in ags., and has been replaced in an uncertain way by *i*, *g*, *ge*. In Chaucer the simple sign *y* is employed [more generally *ȝ*, the *y* is due to the editor, p. 310], which often goes further than in English, as we have not only (*ȝeer*) a year, but *give* and (*ȝeve*, *ȝaf*, *forȝete*, *ȝat*, *ȝen*, *ȝenst*) and (ȝe) or (ȝei) an egg.

The termination *ig* drops its *g*, as (peni) for *penig*, and the particle *ge* assumes the form *i*, as (inuukh) enough, (ibhis) certain, and in the participles (itaken) taken, (imaad) made, (islaa) or (islen) slain, (iseene) seen, (ibhriten) written, etc. From (gehiike) comes

(iliik) or (iliitsh), and the suffixed (-liik) is reduced to (li).

The old pronunciation (qg) must be retained for *ng*, thus (logg, logger) or (leqger); there is no certain evidence for (loqg). The French nasal is in preference expressed by *n*. What the Frenchman wrote *raison* and pronounced (ræsoq) is here written *resoun* and called (resuun), as if the (q) were unknown. As the termination in *givende* has assumed the form (*giving*), we might conjecture the sound to be (giviq), because the form comes direct from (givin), as the Scotch and common people still say, but we must remember that *giving* also answers to the German *Gebung*, in which the *g* is significant.

We now come to *h*, which is also a difficulty. That initial *h* before a vowel had now become (h) as in German of the XIIIth century, is very probable, because *h* was also written in Latin and French words, and is still spoken. Chaucer has occasionally elided the silent *h* in the French fashion before *h*, which was certainly an error [*was freilich ein Missgriff war!* shared by Ormin, supra p. 490, and intermediate writers, who were free from French influence.] For the medial *h*, the dialect perceived its difference from (h), and hence used the new combination *gh*, known in the old Flemish, where the soft (kh) has been developed from *g*. The ags. *nicht* = (nikht) became *night* = (nikht), and similarly *thurgh* = (thurkh). For (khlzakhan) we have *lawh*, and *laugh*, both = (laakh); (seakh) gives *sawh* = (saakh) or *seigh* = (seekh). Before *l*, *n*, *r*, the ags. *h* has disappeared, but ags. (khhhiite) is here somewhat singularly written *white*, a transposition of *hwite*. Had *h* been silent it would have been omitted as in *hl*, *hn*, *hr*, but as it was different from an ordinary *h* before a vowel, this abnormal sign for (khhb), formed on the analogy of *gh*, came into use, and really signified an abbreviated heavy *ghw*. Hence (khhhiite) retained its Anglosaxon sound in Chaucer's time. [Rapp could not distinguish English *w* from (u), and hence to him *w*h was (hu), the real meaning of *w*h thus escaped him. His theory is that *h* was always (kh) in the old Teutonic languages.]

We have still to consider *sk* and *ks*.

The former was softened to (sjk) in ags., and hence prepared the way for the simple (sh), and this may have nearly occurred by Chaucer's time, as he writes *sch* which bears the same relation to the French *ch* = (tsh), as the Italian *sci* to *ci*, *s* shewing the omission of the initial *t*. Some MSS. use *sch* and even the present *sh*, the guttural being entirely forgotten. The ags. *ks* remains, but *sk* is still transposed into *ks* in the bad old way, as *axe* = (akse) for (aske).

For the vowels, Gescenius has come to conclusions, which are partly based on Grimm's Grammar, and partly due to his having been preoccupied with modern English, and have no firm foundation. The Englishmen of the present day have no more idea how to read their own old language, than the Frenchmen theirs. We Germans are less prejudiced in these matters, and can judge more freely. Two conditions are necessary for reading old English correctly—first, to read Anglosaxon correctly, whence the dialect arose; secondly, to read old French correctly, on whose orthography the old English was quite unmistakably modelled. [The complete catena of old English writers now known, renders this assertion more than doubtful. See *supra* p. 588, n. 2, and p. 640.]

We must presume that the old French *a* was pure (a). The ags. *a*, was lower = (a). The English orthography paid no attention to this difference, and hence spoke French *a* as (a). There can be no doubt of this, if we observe that this *a* was lengthened into *au* or *aw*, the value of which from a French point of view was (aa), as it still is in English, as *straunge*, *acmaunde*, *tyraunt*, *graunte*, *haunte*. In all these cases the Englishman endeavours to imitate French nasality by the combination (aan). [This *au* for *a* only occurs before *n*, see *supra* p. 143, and *infra* Chap. VIII., § 3].

The old short vowel *a* hence remains (a) as in ags, thus (makjan) is in the oldest documents (makie, maki) and afterwards (make), where the (a) need no more be prolonged by the accent than in the German *machen* (mak'h'en), and we may read (makke). [But see Orrmin's *makenn*, p. 492].

The most important point is that the ags. false diphthongs are again overcome; instead of (ealle) we have the

older form (alle), instead of (skearp) we find (sharpe) etc. The nasal (an), as in ags., is disposed to fall into (on), as (hond, lond, droqk, begonne), etc.

The greatest doubt might arise from the ags. *æ* or rather (æ) appearing as (a) without mutation; thus, ags. (thæt, khhæt, bhæter, smæl) again fall into (that, khhbat, bhater, smal). The mutation is revoked—that means, the ags. mutation had prevailed in literature, but not with the whole mass of the people, and hence in the present popular formation might revert to the older sound, for it is undeniable that although the present Englishman says (dhæt) with a mutated *a*, he pronounces (huat, uatær, smaal) what, water, small, without a mutate. In most cases the non-mutated form may be explained by a flexion, for if (dæg) in ags. gave the plural (dagas), we may understand how Chaucer writes at one time (dæ) day and at another (dæa) dæw for day,

Short *e* remains unchanged as (æ) under the accent, when unaccented it had perhaps become (ə). Even in ags. it interchanges with *i*, *y*, as (tshirtsh) or (tshertsh) church. The ags. *eo* is again overcome, for although forms like *beo*, *beop*, still occur in the oldest monuments, *e* is the later form, so that (steorra) star again becomes (stærre), and (gæolu) yellow gives (jælbhe, jælu), (fxol) fell becomes (fæll, fill), etc. A short (æ) sometimes rhymes with a long one in Chaucer, as (mæde, reede) meadow, red. Such false rhymes are however found in German poetry of the XIIIth century, and they are far from justifying us in introducing the modern long vowel into such words as (make, mede), etc.

The old long vowel *e* is here (ee), as appears all the more certainly from its not being distinguished in writing from the short. [Rapp writes *é* *è*, but he usually pairs *ê* *ë*, *û* *ü* = (ee *e*, *ee* *e*), the (ee) being doubtful, (ee, ee). This arises from German habits, but in reality in closed syllables (ë) is more frequent than (e), if a distinction has to be made. It would perhaps have represented Rapp more correctly to have written (ee *e*, *ee* *e*), but I considered myself bound to the other distribution, although it leads here to the absurdity of making (ee, e) a pair]. The quantity of the ags. must be retained, hence (seekan, keen) can only give (seeke, keen) seek, keen, and from

(sbheete) we also obtain (soote), with omitted (ee), compare Norse (sœet) sweet. [The careful notation of quantity by Orrmin points him out as a better authority for this later period.] Long (ee) also replaces ags. *e* as (heere, see, sleepe) hare, sea, sleep, and the old long *eo* as (seekc, leeve leeve, deepe, tsheese) seek, lief, deep, choose, and finally the old long *ea* as (eek) from (éak), and similarly (greete, beene, tsheepe) great, bean, cheapen. These different (ee) rhyme together and have regularly become (ii) in modern English. There is no doubt about short *i*, and long *i* could not have been a diphthong, because the French orthography had no suspicion of such a sound. Ags. *y* is sometimes rendered by *ui* as *fuire* fire, which, however, already rhymes with (miire) and must therefore have sounded (fiire). The (yy) had become (ii) even in ags., so that (bruud) becomes (briide), etc. Least of all can we suppose short *i* in (bhilde, tshilde, finde) wild, child, find, to be diphthongal, or even long, as the orthography would have otherwise been quite different.

Short *o* may retain its natural sound (o), and often replaces ags. *u*, thus (sumor) gives (sommer), and (khnut, furthor) give (not, forther) nut, further. In these cases the Englishman generally recurs to the mutate of (u), to be presently mentioned.

Long *o* in Chaucer unites two old long vowels, (aa) in (hoome), sometimes (HAM), (goost from (gaast), (oother) from (aath) oath, (hoote) from (hat); and the old (oo) in (booke, tooke, foote, soothe). Both (oo) rhyme together, and must have, therefore, closely resembled each other; they can scarcely have been the same, as they afterwards separated; the latter may have inclined to (u) and has become quite (u).

The sound of (u) is in the French fashion constantly denoted by *ou*. [But see *suprà* p. 425, l. 3. Rapp is probably wrong in attributing the introduction to French influence.] French *raison* was written *raisun* by the Anglo-Norman, and *resoun* by Chaucer, which could have only sounded (resuun). A diphthong is impossible, as the name *Caucasus* Caucasus rhymes with *hous*, and *resoun* with *toun*. Hence the sound must have been (huus, tuun) as in all German dialects of this date.

Hence we have (fluor) flower for the French (fleur). The real difficulty consists in determining the quantity of the vowel, as it is not shewn by the spelling. Position would require a short (u) in cases like (shulder, hund, stund, bunden) shoulder, old (skulder), hound, hour, bound; but the old (sookhte) must produce a (suukhte) sought; and cases like (brukhte, thukhte) brought, thought, are doubtful.

On the other hand the vowel written *u*, must have been the mutate common to the French, Icelfander, Dutchman, Swede. The true sound is therefore an intermediate, which may have fluctuated between (æ, v, y), (lyst, kyrs) desire, curse. These *u* generally derive from ags. *u*, not *y*. The use of this sound in the unaccented syllable is remarkable. The ags. (bathjan) has two forms of the participle (bathod, bathed). Hence the two forms in Chaucer, (bathyd) or rather (bathud) exactly as in Icelandic [where the *u* = (æ), not (v), *suprà* p. 548], the second (bathid, bathed). Later English, however, could not fix this intermediate sound, and hence, forced by the mutations, gave the short *u* the colourless natural vowel (æ), except before *r* where we still hear (æ), [meaning, perhaps (æ)]. This theoretical account does not seem to represent the facts of the case.] The above value of short (u) in old English is proved by all French words having this orthography. Sometimes Chaucer endeavours to express long (yy) by *ui*, as *fruit*, where, however, we may suspect the French diphthong; but generally he writes *nature* for (natyyre) without symbolising the length. We should not be misled by the retention of the pure (u) in modern English for a few of these mutated *u*, as (full, putt, shudd, fruit). These anomalies establish no more against the clear rule than the few pure (a) of modern English prove anything against its ancient value.

The written diphthongs cause peculiar difficulties. The combinations *ai*, *ay*, *ei*, *ey*, must have their French sound (æ), but as they often arise from (æg) there seems to have been an intermediate half-diphthongal or triphthongal (æei); thus (dæge) gives (dæei) or (dæe). From (éage) we have the variants *eye*, *ye*, *cighe*, *yghe*, so that the sound varies as (ææe, iie, iie,

rukhe, iikhe). Similarly (hükhe) and (hiie) high, and (nëkhe, niie) nigh. We have already considered *au*, *aw*, to have been (AA). The ags. (*lagu*, *lakh*) law, gives *lawe*, which perhaps bordered on a triphthongal (laawe). In the same way we occasionally find (daawe) day, in two syllables, instead of the usual (dæe), ags. (dæg, *dagas*), and from ags. (saabhl) comes *sawle* = (saale) and *soule*, which could have only been (suule). The medial *ou* = *ou*, that is, (uu), but before a vowel it might also border on a triphthong; thus *lowe* = (luukh) low, is also written *lowe* = (looue) ? *Oughen* = (uukhen), and also *owen* = (ouuen), now *own* = (oon). Similarly *grove* may have varied between (gruue, grooue) and so on with many others. These cases give most room for doubt, and the dialect was probably unsettled. But the diphthong *eu*, *ew*, leaves no room for doubt; it cannot be French (œ) for *heure* hour is here (hyyre) [probably a misprint for (huure)], and for *people* we also find (peuple). On the other hand the French *beauté*, which was called (béaute, *béotee*) is here written *béuté*, which was clearly (brutee). Similarly German words, as *knew*, cannot have been anything but (kneo, knen). Similarly (neue) new. The French diphthong *oi* as in *vois*

voice, was taken over unaltered, and also replaces romanian *ui*, which was too far removed from English feelings; we have seen *fruit* pass into (fryyt, frut); *ennuyer* becomes (anai) and *destruire* is written *destruie*, *destric*, but had the same sound (destrui).

As regards the so-called mute *e*, it was undeniably historical in Chaucer and represented old inflections, yet it was, with equal certainty, in many cases merely mechanically imitated from the French. But we cannot scan Chaucer in the French fashion, without omitting or inserting the mute *e* at our pleasure, and in a critical edition of the poet, the spoken *e* only ought to be written. What was its sound when spoken? Certainly not (ə) as in French, but a pure (e) with some inclination to (i). This is shown by the rhyme (*soothe, too thee*) already cited, and many others, as *clerkes, derk is*; (*dreed is, deedes*) etc. At present Englishmen pronounce this final *e* in the same way as *i*, and in general *e, i* present as natural a *euphonicum* as the French (ə).

The following are the opening lines of the Canterbury Tales reduced to a strict metre.

[Some misprints seem to occur in the original, but I have left them uncorrected.]

If in the above we read (ee, e) and (oo, o) for (æe, e) and (oo, o), and (e) for (æ) which is a slight difference, and also (ii, i) for (ii, i), and do not insist on (a) for (a), and also read (w, wh) for the un-English (bh, kbbh), the differences between this transcript and my own, reduce to 1) the treatment of final *e*, which Rapp had not sufficiently studied; 2) the merging of all short *u* into (y), certainly erroneous; 3) the indistinct separation of the two values of *ou* into (uu, ouu), and 4) the conception of (æe), an un-English sound, as the proper pronunciation of *ey*, *ay* as distinct from long *e*. It is remarkable that so much similarity should have been attained by such a distinctly different course of investigation.

INSTRUCTIONS FOR READING THE PHONETIC TRANSCRIPT OF THE PROLOGUE.

The application of the results of Chapter IV. to the exhibition of the pronunciation of the prologue, has been a work of great difficulty, and numerous cases of hesitation occurred, where analogy alone could decide. The passages have been studied carefully, and in order to judge of the effect, I have endeavoured to familiarise myself with the conception of the pronunciation by continually reading aloud. The examination of older pronunciation in Chap. V., has on the whole confirmed the view taken, and I feel considerable confidence in recommending Early English scholars to endeavour to read some passages for themselves, and not to pre-judge the effect, as many from old habits may feel inclined. As some difficulty may be felt in acquiring the facility of utterance necessary for judging of the effect of this system of pronunciation, it may not be out of place to give a few hints for practice in reading, shewing how those who find a difficulty in reproducing the precise sounds which are indicated, may approximate to them sufficiently for this purpose. These instructions correspond to those which I have given in the introduction to the second edition of Mr. B. Morris's *Chaucer*.

The roman vowels (a, c, o, u) must be pronounced as in Italian,

with the broad or open *e*, *o*, not the narrow or close sounds. They are practically the same as the short vowels in German, or the French short *a*, *è*, *o*, *ou*. The (*a*) is never our common English *a* in *fat*, that is (*æ*), but is much broader, as in the provinces, though Londoners will probably say (*æ*). For (*o*) few will perhaps use any sound but the familiar (*o*). The (*u*) also may be pronounced as (*u*), that is, *u* in *bull* or *oo* in *foot*. The long vowels are (*aa*, *ee*, *oo*, *uu*) and represent the same sounds prolonged, but if any English reader finds a difficulty in pronouncing the broad and long (*ee*, *oo*) as in Italian, Spanish, Welsh, and before *r* in the modern English *mare*, *more*, he may take the easier close sounds (*ee*, *oo*) as in *male*, *mole*. The short (*i*) is the English short *i* in *pit*, and will occasion no difficulty. But the long (*ii*) being unusual, if it cannot be appreciated by help of the directions on p. 106, may be pronounced as (*ii*), that is as *ee* in *feet*. The vowel (*yy*), which only occurs long, is the long French *u*, or long German *ü*. The final (-*c*) should be pronounced shortly and indistinctly, like the German final -*e*, or our final *a* in *China*, *idea*, (suprà p. 119, note, col. 2), and inflectional final -*en* should sound as we now pronounce -*en* in *science*, *patient*. It would probably have been more correct to write (*v*) in these places, but there is no authority for any other but an (*e*) sound, see p. 318.

For the diphthongs, (*ai*) represents the German *ai*, French, *ai* Italian *ahi*, Welsh *ai*, the usual sound of English *aye*,¹ when it is distinguished from *eye*, but readers may confound it with that sound without inconvenience. The diphthong (*au*) represents the German *au*, and bears the same relation to the English *ow* in *now*, as the German *ai* to English *eye*, but readers may without inconvenience use the sound of English *ow* in *now*. Many English speakers habitually say (*ai*, *au*) for (*ei*, *ou*) in *eye*, *now*. The diphthong (*ui*) is the Italian *ui* in *lui*, the French *oui* nearly, or more exactly the French *oui* taking care to accent the first element, and not to confound the sound with the English *we*.

The aspirate is always represented by (*H n*), never by (*h*), which is only used to modify preceding letters.

(*J j*) must be pronounced as German *j* in *ja*, or English *y* in *yea*, *yawn*, and not as English *j* in *just*.

The letters (*b d f g k l m n p r s t v w z*) have their ordinary English meanings, but it should be remembered that (*g*) is always as in *gay*, *go*, *get*, never as in *gem*; that (*r*) is always trilled with the tip of the tongue as in *ray*, *roe*, and never pronounced as in *air*, *ear*, *oar*; and also that (*s*) is always the hiss in *hiss* and never like a (*z*) as in *his*, or like (*sh*). The letter (*q*) has altogether a new meaning, that of *ng* in *sing*, *singer*, but *ng* in *finger* is (*qg*).

¹ This word is variously pronounced, and some persons rhyme it with *nay*. In taking votes at a public meeting the sound intended to be conveyed in the

text is generally used in the South of England, but this pronunciation is perhaps unknown in Scotland.

(Th, dh) represent the sounds in *thin*, *then*, the modern Greek $\theta \delta$.

(Sh, zh) are the sounds in *mesh* measure, or *pish*, vision, the Fr. *ch, j*.

(Kh, gh) are the usual German *ch* in *ach* and *g* in *Tage*. But careful speakers will observe that the Germans have three sounds of *ch* as in *ich*, *ach*, *auch*, and these are distinguished as (*kh*, *kh*, *kwh*); and the similar varieties (*gh*, *gh*, *gwh*) are sometimes found. The reader who feels it difficult to distinguish these three sounds, may content himself with saying (*kh*, *gh*) or even (π'). The (*kwh*) when initial is the Scotch *quh*, Welsh *chw*, and may be called (*khw*-) without inconvenience. Final (*gwh*) differs little from (*wh*) as truly pronounced in *when*, *what*, which should, if possible, be carefully distinguished from (*w*). As however (*wh*) is almost unknown to speakers in the south of England, they may approximate to it, when initial, by saying ($\pi'u$), and, when final, by saying ($u\pi'$).

The italic (*w*) is also used in the combination (*kw*) which has precisely the sound of *qu* in *queen*, and in (*rw*) which may be pronounced as (*rw*), without inconvenience.

(*Tsh*, *dzh*) are the consonantal diphthongs in *chest* *jest*, or *such* *fudge*.

The hyphen (-) indicates that the words or letters between which it is placed, are only separated for the convenience of the reader, but are really run on to each other in speech. Hence it frequently stands for an omitted letter (p. 10), and is frequently used for an omitted initial (π), in those positions where the constant elision of a preceding final -*e* shews that it could not have been pronounced (p. 314).

These are all the signs which occur in the prologue, except the accent point (·), which indicates the principal stress. Every syllable of a word is sometimes followed by (·), as (*naa'ttyr'*), in order to warn the reader not to slur over or place a predominant stress on either syllable. For the same reason long vowels are often written in unaccented syllables.

If the reader will bear these directions in mind and remember to pronounce with a general broad tone, rather Germanesque or provincial, he will have no difficulty in reading out the following prologue, and when he has attained facility in reading for himself, or has an opportunity of hearing others read in this way, he will be able to judge of the result, but not before.

The name of the poet, Geoffrey Chaucer, may be called (*Dzhef'rai-Tshau'seer'*), but the first name may also have been called (*Dzhef'reer'*), see *supra* p. 462. The evenness of stress seems guaranteed by Gower's even stress on his own name (*Guu'eer'*), but he uses Chaucer only with the accent on the first syllable, just as Chaucer also accents Gower only on the first.

33 foorward. promise. No MS. marks the length of the vowel in foor, but as the word came from *foreweard*, it would, according to the usual analogy, evidenced by the modern pronunciation of *fore*, have become lengthened, and the long vowel, after the extinction of the *e*, becomes useful in distinguishing the word from forward, onward. for to ryse is the reading of the six MSS.

36 eer, E. He. L. read *er*, the others *or* ; in either case the vowel was probably long as in modern *ere*.

38 tellen, the MSS. have telle, the n has been added on account of the following y.

46 curteysye, so E. He. Ca., the rest have curtesye ; the ey has been retained on account of curteys. See *Courtesy*, p. 644.

56 eek is inserted in the six MSS.

57 Palmyrye, the MSS. have all the unintelligible Belmarye. This correction is due, I believe, to Mr. W. Aldis Wright, who has kindly favoured me with his collation of v. 15733 in various MSS.

The trissyllabic measure was over-
 looked in the enumeration on p. 648,
 sub. -en.

60 aryve', so Ha. and Ca., the
 others have armeye, arme, for
 which the word nobl' will have to
 be nobel, in two syllables, which
 is not usual before a vowel, and the
 construction to be at an arme,
 seems doubtful, while to be at an
 aryvee or landing in the Grete
 Se is natural.

68 wer', so E. He. Ca., the others
 was.

- And of his poort' as meek as is a mayde.
 Ne never yit no *vilayny*' he seyde
 In al his lyf, unto no *maner*' wight.
 He was a *veray persyt gentil* knight. 72
 But for to tellen you of his *aray*,
 His hors was good, but he ne was not *gay*.
 Of *fustian* he wered' a *gipoun*,
 — Al bismoter'd with his *hawbergeoun*. 76
 iii For he was laat' ycomen from his *vyage*,
 And wente for to doon his *pilgrymage*.

2. THE SQUIRE.

- With him ther was his son', a yong *Squyeer*,
 iii A lovier, and a lusty *bacheleer*, 80
 With lockes crull' as they wer' leyd' in *presse*.
 Of twenty yeer he was of *aag*' I gesse.
 Of his *statur*' he was of ev'ne lengthe
 iii And wonderly *deliver*, and greet of strengthe. 84
 And he hadd' ben somtym' in *chivachye*
 In *Flawndres*, in *Artoys*, and *Picardye*,
 And boorn him weel, as in so lytel *space*,
 iii In hope to stonden in his lady *grace*. 88
Embrouded was he, as it wer' a mede
 Al ful of *fresche floures* whit' and rede.
 Singing' he was, or *flouting*' al the day;
 He was as *fresch* as is the mon'th of *May*. 92
 Schort was his gown, with sleves long and wyde.
 Weel cou'd' he sitt' on hors, and fayre ryde.
 He coude songes mak' and weel *endyte*,
Just' and cek *dawnc*', and weel *purtray*' and wrytc. 96
 So hoot he loved', that by nightertale
 He sleep no moor' than dooth a nightingale.
Curteys he was, lowly, and *servisabel*,
 And carf bifoorn his fader at the *tabel*. 100

3. THE YEMAN.

- A Yeman hadd' he and *servaunt's* no mo,
 At that tym', for him liste ryde so;
 And he was clad in *coot*' and hood' of grene.
 A scheef of pocock arwes bright' and kene 104
 Under his belt' he baar ful thriftily.
 Weel cou'd' he dress' his tackel yemanly,
 His arwes drouped' nowght with fethres lowe,
 And in his hond he baar a mighty bowe. 108
 A notheed hadd' he, with a broun *visage*.
 Of wodecraft weel cou'd' he al th' *usage*.

90 *freshe* was not counted in the enumeration of the fr. words p. 651. In correcting the proofs several other omissions have been found and a new

enumeration will be given in a footnote to the last line of the Prologue.

109 *notheed*, a closely cropped poll. *Tondre*, "to sheere, clip, cut,

And of -is poort as meek as is a maid'e.

 Hīs hors was good, but hēe ne was not gai,
 Of fus'tiaan' -e weered a dzhii'puun',
 Al bismoot'erd with -is hau'berdzhuun' 76
 For hēe was laat ikum'en from hīs vii'aadzhe',
 And went'e for to doon -is pil-grimaadzh'e.

2. Dhe Skwi'eer

With him dheer was -is suun, a juq Skwi'eer',
 A luv'eer, and a lust'ii baa'tsheleer', 80
 With lok'es krul as dhai wer laid in pres'e.
 Of twent'ii jeer -e was of aadzh īi ges'e.
 Of hīs staa'tyyr' -e was of eev'ne lēqth'e,
 And wunderlii deliv'er, and greet of stregh'e. 84
 And hēe -ad been sumtīm' in tshii'vaatshii'e
 In Flaun'dres, in Artuis', and Pii'kardi'e,
 And boorn -im weel, as in soo lī't'l spaas'e,
 In hoop'e to stond'en in -is laad'ii graas'e. 88
 Embruud'ed was -e, as it wer a meed'e
 Al ful of fresh'e fluur'es, whīt and reed'e.
 Siq'iq' -e was, or fluu'tiq', al dhe dai;
 He was as fresh as is dhe moonth of Mai. 92
 Short was -is guun, with sleeves loq and wiid'e.
 Weel kuud -e sit on hors, and fair'e riid'e,
 He kuud'e soq'es maak and weel end'iit'e,
 Dzhust and eek dauns, and weel purtrai' and rwiit'e. 96
 So hoot -e luv'ed dhat bii nīkht'ertaal'e
 He sleep noo moor dhan dooth a nīkht'iqgaal'e.
 Kur'tais' -e was, loou'lii', and serviis'aa'b'l,
 And karf bifoorn' -is faad'er at dhe taa'b'l. 100

3. Dhe Jee'man.

A Jee'man had -e and ser'vaunts' noo moo,
 At dhat tīm, for -im list'e riid'e soo;
 And hēe was klad in koot and mood of green'e.
 A sheef of poo'kok ar'wes brikt and keen'e 104
 Under -is belt -e baar ful thrift'ili.
 Weel kuud -e dres -is tak'l jee'manlii';
 Hīs ar'wes druup'ed noukwīht with fedh erz loou'e,
 And in -is mond -e baar a mīkht'ii boou'e. 108
 A not'need had -e, with a bruun vii'saadzh'e.
 Of wood'ekraft weel kuud -e al dh-yy'saadzh'e.

 iii *Entuned* in hir' noose ful semely ;
 And *Frensch* sche spaak ful fayr' and *fetisly*, 124
 After the scool' of Stratford atte Bowe,
 For *Frensch* of *Paris* was to hir' unknowe.
 At mete weel ytawght was sche withalle ;
 Sche leet no *morsel* from hir' lippes falle, 128
 Ne wett' hir' finger's in hir' *sawce* depe.
 iii Weel coud' sche *cari'* a *morsel*, and weel kepe,
 — That no droppe fil upon hir' breste.
 iii In *curteysye* was set ful moch' hir' leste. 132
 Hir' overlippe wyped' sche so clene,
 That in hir' cuppe was no ferthing sene
 Of grese, whan sche dronken hadd' hir' drawght.
 iii Ful semely after hir' mete sche rawght'. 136
 And sikerly sche was of greet *dispoorte*,
 And ful *plesawnt*, and *amiabl'* of *poorte*,
 And *peyned'* hir' to *countrefete chere*
 Of *court'*, and been *estaaflich* of *manere*, 140
 And to been hoolden *dign'* of *reverence*.
 But for to speken of hir' *conscience*,
 Sche was so *charitab'l* and so *pitous*,
 Sche wolde weep' if that sche sawgh a mous 144
 Cawght in a trapp', if it wer' deed or bledde.
 Of smale houndes hadd' sche, that sche fedde
 With *roosted* flesch, and milk, and *wastel* breed,
 vi But sore wepte sche if oon of hem wer' deed, 148

coi. 3. Jamieson gives the forms *nott*, *nowt* for black cattle, properly oxen with the secondary sense of *lout*, and refers to Icel. *naut* (*nœt*), Dan. *nød* (*nœd*), Sw. *nöt* (*nœt*), and ags. *neut*, our modern *neat* (*niit*) cattle.

and 697 *infra* for the probable occasional dissyllabic use of *saynt as* (*saa'nt*). As this had not been observed, Tyrwhitt proposes to complete the metre by reading *Eloy* with no MS. authority, Prof. Child proposes *othe* (*suprà* p. 390, *sub.* oath), thus: Hir' gretest *othe nas* but by Saint Loy, and Mr. Morris would read *ne was* as in v. 74, thus: Hir' gretest ooth *ne was* but by

Upon -is arm -e baar a gai braa'seer,
 And biī -is siid a swerd and a buk'leer, 112
 And on dhat udher siid a gai dag'eer

 A Krist'ofr- on -is brest of sil-ver sheen'e.
 An horn -e baar, dhe bau'drik was of green'e. 116
 A for'steer was -e sooth'lii, as *Li* ges'e.

4. Dhe Prii'ores'e.

Dheer was al'soo a Nun, a Prii'ores'e,
 Dhat of -iir smiil'iq was ful sim'pl- and kui,
 Hiir greet'est ooth was but biī saa'int Lui; 120
 And shee was klep'ed maa'daam' Eq'lenti'ine.

 After dhe skool of Strat'ford at'e Boore,
 For Frensh of Paa'riis' was to hiir unknow'e,
 At mee'te weel itaukw'ht was shee withal'e,
 She leet noo morsel from -iir lip'es fal'e, 128
 Ne wet -iir fig'gerz in -iir saus'e deep'e.
 Weel kuud she kar'i a morsel, and weel keep'e
 Dhat no drop'e fil upon -iir brest'e.
 In kur'taisi'e was set ful mutsh -iir lest'e. 132
 Hiir overlip'e wiip'ed shee soo kleen'e,
 Dhat in -iir kup'e was no ferdh'iq scen'e
 Of grees'e, whan shee druqk'en had -iir draukw'ht.
 Ful see'meliī aft'er -iir meet'e she raukw'ht. 136
 And s'kerliī she was of greet dispoort'e,
 And ful plee'zaunt and aa'miaa-bl- of poort'e,
 And pain'ed hiir to kuun'trefeet'e tsheer'e
 Of kuurt, and been estaat'litsh of man'eer'e, 140
 And to been hoold'en diin of reev'erens'e.
 But for to speek'en of -iir kon'siens'e,
 She was soo tshaar'itaa-bl- and soo pii'tuus',
 She wold'e weep, if dhat she saugw'h a muus 144

 Of smaal'e rund'es had she, dhat she fed'e
 With roost'ed flesh, and milk and was'tel breed,
 But soor'e wep'te shee if oon of hem wer deed, 146

Saint Loy. Both the last suggestions make a lame line by throwing the accent on by, unless we make by saynt Loy, a quotation of the Nonne's oath, which is not probable. The Ha. has nas, the Six MSS. have was simply. For othe, which is a very doubtful form, Prof. Child refers to 1141, where Ha. reads: This was thyn othe and myn eek certayn, which would require the exceptional preser-

vation of the open vowel in othe, but all the Six MSS. read: This was thyn ooth, and myn also certeyn, only P., L. write a superfluous e as othe. 122 servyse. See *suprà*, p. 331. 131 fil, all MSS. except He. read ne fil. The insertion of ne would introduce a iii. 132 ful, so E. Ca. Co. L. 148 Sō all MSS., producing an Alexandrine, see *suprà* p. 649.

- Or if men smoot' it with a yerde smerte,
 And al was *conscienc'* and *tend're* herte.
 Ful semely hir' wimp'l y*pinched* was ;
 Hir' nose streyt ; hir' eyen grey as glas ; 152
 Hir' mouth ful smaal, and theerto soft' and reed,
 But sikerly sche hadd' a fayr foorhced.

- Another *Nonn'* also with hir' hadd' sche,
 That was hir' *chapellayn*, and Preestes thre. 164

9. THE MONK.

- A Monk ther was, a fayr for the *maystrye*,
 An out-rydeer, that loved' *venerye* ;
 A manly man, to been an abbot *abel*.
 Ful many a deynte hors hadd' he in *stabel* : 168
 And whan he rood, men might his bridel here
 — Gingen, in a whistling' wind' as *clere*
 And eek as loud' as dooth the *chapel* belle
 Theer as this lord was keper of the *celle*. 172
 The *reul'* of *Saynt Maur'* or of *Saynt Beneyt*,
 Becaws' that it was oold and somdeel *streyt*,
 This ilke Monk leet it forby him *pace*,
 And heeld after the newe world the *space*. 176
 He yaaf nat of that text a pulled hen,
 That sayth, that hunter's been noon holy men,
 Ne that a monk, whan he is recchelees,
 Is lyken'd to a fisch' that's waterlees ; 180
 This is to sayn, a monk out of his *cloyster*,
 But thilke text heeld he not worth an *oyster*.

159 *payr'*. This was accidentally not counted among the French words on p. 651.

164 *Chapellayn*. See Temp. Pref. to Six-Text Ed. of Chaucer, p. 92.

170 *Gingen*. E. *gyngle*. He. *gyngelyn* Ca., *gynglyng* Co. Pe. L. In any case the line has an imperfect initial measure, and the reading in He. has only four measures.

175 This line has evidently caused difficulties to the old transcribers. The following are the readings :

This ilke monk leet forby hem *pace*. —Ha.

This ilke monk leet olde thynges *pace*. —The six MSS.

Now the Ha. is not only defective in metre, but in sense, for there is no antecedent to *hem*. The two rules

 Hi*ir* nooze strait, hi*ir* ai'en grai as glas, 152
 Hi*ir* muuth ful smaal, and dheer too soft and reed,
 But sik'erli*ii* she had a fair foor'heed.
 It was almoost a span'e brood, I*i* troure,
 For har'deli*ii* she was not un'dergroou'e. 156
 Ful feet'is was -i*ir* klook, as I*i* was waar.
 Of smaal koo'raal' abuut -i*ir* arm she baar
 A pair of beed'es gaud'ed al with green'e;
 And dheer'on neq a brootsh of goold ful shecn'e, 160
 On whitsh dher was first ruit'en a kruun'ed A*a*,
 And aft'er, A*a* mor vin'sit om'n'ia*a*.

5. 6. 7. 8. Anudher Nun'e and three Preest'es.

Anudher Nun alsoo with hi*ir* -ad shce,
 Dhat was -i*ir* tshaa'pelain', and Preest'es three. 164

9. Dhe Muqk.

A Muqk dher was, a fair for dhe maist'ri'e,
 An uut'riideer', dhat luv'ed vee'neri'e,
 A man'li*ii* man, to been an abot aa'b'l.
 Ful man'z- a dain'tee hors -ad hee in staa'b'l: 168
 And whan -e rood men mikht -is brii'd'l neer'e
 Dzhig'len in a whist'liq wind as kleer'e
 And cek as luud as dooth dhe tshaa'pel' bel'e
 Dheer as dhis lord was keep'er of dhe sel'e. 172
 Dhe rryl of saint Maur or of saint Benait',
 Bekaus' dhat it was oold and sum'deel strait,
 Dhis ilk'e Muqk leet it forbii -im paas'e,
 And neeld aft'er dhe neu'e world dhe spaas'e. 176
 He jaaf nat of dhat tekst a pul'ed hen,
 Dhat saith dhat nunt'erz been noon hool'ii men,
 Ne dhat a muqk, whan hee is retsh'elees,
 Is liik'end too a fish dhat -s waa'terlees; 180
 Dhat is to sain, a muqk uut of -is kluist'er,
 But dhi'lk'e tekst neeld nee not wurth an uist'er.

named being separated by *or*, have been referred to as *it* in the preceding line. I therefore conjecturally insert *it* and change *hem* to *him*, though I cannot bring other instances of the use of *forby him*. The reading of the six MSS. gets out of the difficulty by a clumsy repetition of *old*, and by leaving a sentence incomplete thus: "the rule . . . because that it was old . . . this monk

let old things pass," which must be erroneous.

179 *recchelees*, so the six MSS. It probably stands for *rezhel-lees*, without his rule, which not being a usual phrase required the explanation of v. 181, and the Ha. *cloysterlees* was only a gloss which crept into the text out of v. 181, and renders that line a useless repetition.

- And I sayd' his *opynioun* was good.
- iii What! schuld' he *studi'*, and mak' himselven wood, 184
 Upon a book in *cloyst'r* alwey to poure,
 Or swinke with his handes, and *laboure*,
 As Awstin bit? Hou schal the world be *served*?
 Let Awstin hav' his swink to him *reserved*. 188
 Theerfor' he was a prikasour aright;
 Grayhound's he hadd' as swift as foul in flight,
 Of priking' and of hunting' for the hare
 Was al his lust, for no *cost* wold' he spare. 192
 I sawgh his slew's *purfyled* atte honde
 With *grys*' and that the *fynewest* of a londe,
 And for to fest'n' his hood under his chin
- iii He hadd' of goold ywrowght a *curious* pin; 196
- iii A loveknot' in the greter ende ther was.
- iii His heed was balled and schoon as any *glas*,
 And eek his *faac*' as he hadd' been *anoynt*;
 He was a lord ful fat and in good *poynt*; 200

 That stemed, as a *formays* of a leed;
 His *botes soup'l*, his hors in greet *estaat*.
 Nou *certaynly* he was a fayr *prelaat*; 204
 He was not *pal'* as a forpyned goost.
 A fat swan lov'd' he best of any *roost*.
 + His *palfrey* was as broun as is a beryc.

10. THE FRERE.

- + iii A Frere ther' was, a wantoun and a merye, 208
 A *limitour*, a ful *solemne* man.
 In alle th' *ord'res* fowr' is noon that can
 So moch' of *daliawnc'* and fayr *langage*.
- iii He hadd' ymaad ful many a fayr *mariage* 212
 Of yonge wimmen, at his owne *cost*.
 Unto his *ord'r* he was a *nobel post*.
- iii Ful weel bilov'd and *familieer* was he 216
 With frankeleyns ov'ral in his *cuntre*,
 And eek with worthy wimmen of the toun:
 For he hadd' *poueer* of *confessioun*,
 As sayd' himself, more than a *curaat*,
 For of his *ord'r* he was *licenciaat*. 220
 Ful swetely herd' he *confessioun*,
 And *plesawnt* was his *absolucioun*;
- iii He was an *esy* man to yeve *penaunce*
- iii Theer as he wiste to haan a good *pitawnce*; 224

184 *studi'*, although taken from the French, so that we should expect u = (yy), Ca. and L. read *stodie*, shewing u = (u), which agrees with the

modern u = (a), and has therefore been adopted.

202 fornays, see Temporary Preface to the Six-Text edition, p. 99. 219 See supra p. 331, note. All MSS. agree.
 212 ful occurs in all six MSS.
 217 wim*men*, wommen Ha. E. 223 yeve, all MSS. except L. have the final e.
 He. Co. P., wemen Ca., wemmen L.

- For unto a *por'* order for to yeve
 Is *signe* that a man is weel yschreve.
 For if he yaaf, he dorste mak' *avaunt*,
 He wiste that a man was *repentaunt*. 228
- iii For many a man so hard is of his herte,
 He may not wepe though him sore smerte.
 Theerfor' insted' of weping' and *preyeres*,
 Men moote yeve silver to the *pore freres*. 232
- vi His tipet was ay *farsed* ful of knyfes
 And pinnes, for to yeve fayre wyfes.
 And *certainly* he hadd' a mery *note*.
 Weel coud' he sing' and pleyen on a *rote*. 236
- Of yedding's he baar utterly the *prys*.
 His necke whyt was as the *flour-de-lys*.
 Theerto he strong was as a *chawmpioun*.
 He knew the *tavern's* weel in ev'ry toun, 240
- And ev'rich *ostelleer* or *gay* tapsteer,
 Better than a *lazeer* or a beggeer,
 For unto swich a worthy man as he
Accorded not, as by his *faculte*, 244
- To haan with sike *lazeer's* *acqueyntaunce*.
 It is not *honest*, it may not *avaunce*,
 — For to delen with noon swich *porayle*,
 But al with *rich'* and seller's of *vitayle*. 248
- And ov'ral, ther as *profit* schuld' aryse,
Curteys he was, and lowly of *servyse*.
 Ther was no man no wheer so *vertuous*.
 He was the beste beggeer in his hous, 252
- For though a widwe hadde nowght a sho,
 So *plesaunt* was his *IN PRINCIPIO*,
 Yet wold' he haan a ferthing er he wente.
 His *pourchaas* was weel better than his *rente*. 256
- And *rag'* he coud' and pleyen as a whelp,
 In lovedayes coud' he mochel help'.
 For theer was he not lyk' a *cloystereer*,
 vi With a threedbare *cop'* as a pore *scoleer*, 260
- But he was lyk' a *mayster* or a pope.
 Of *doubel* worsted was his *semicope*,

232 All MSS. agree in making this a line of six measures, and it seems to portray the whining beggary of the cry, *suprà* p. 649.

235 *note*, throte Ca.

240 *tavern's* weel, the six MSS. have this order. Ha. wel the *tavernes*.

247 non E. Hc. Ca., the others omit it.

249 as omitted in Ha. Ca., found in the rest.

252 After this line He. alone inserts the couplet—

And yaf a *certeyn* ferme, for the
graunte

Noon of his bretheren, cam ther in
 his haunte.

253 So all the six MSS., meaning, although a widow had next to nothing in the world, yet so pleasant was his introductory lesson *In principio erat*

For un'to a poor ord'er for to jeev'e
Is si'ne dhat a man *is* weel *ishree'vc*.
 For *if* -e jaaf, -e durst'e maak avaunt',
 He wist'e dhat a man was rec'pentaunt'. 228
 For man'i a man soo hard *is* of -*is* hert'e,
 He mai not weep'e dhoouk'wh -*in* soore smert'e.
 Dheer'foor' instead' of weep'iq' and prai'cees,
 Men moot'e jeev'e sil'ver too dhe poor'e freer'es. 232
 His tip'et was ai fars'ed ful of kni'f'es,
 And pin'es for to jeev'e fair'e wi'f'es.
 And sertainlii -e had a mer'ii noot'e.
 Weel kuud -e siq' and plai'en on a root'e. 236
 Of jed'iqz hee baar ut'erlii dhe priis.
 His nek'e whiit was as dhe fluur de liis.
 Dheer'too' -e stroq was as a tshaump'iun'.
 He kneu dhe taa'vernz' weel in ev'rii tuun, 240
 And ev'ritsh ost'eleer' or gai tapsteer',
 Bet'er dhan a laa'zeer' or a beg'eer',
 For un'to switsh a wurdh'ii man as hee
 Akord'ed not, as bii -is fak'ultee 244
 To naan with siik'e laa'zeerz' aa'kwain'tauns'e;
It is not on'est, it mai not ayauns'e,
 For to deel'en with noon switsh poor'ail'e
 But al with ritsh and sel'erz' of vii'tail'e. 248
 And ov'ral, dheer as prof'it shuld ariis'e,
 Kur'tais' -e was, and loou'lii of serv'viis'e.
 Dher was noo man noo wheer soo ver'tyy'uus'.
 He was dhe best'e beg'eer' in -is huus, 252
 For dhoouk'wh a wid'we had'e nouk'wht a shoo,
 So pleesaunt' was -is *In prin'sii'p'io* o,
 Jet wold -e naan a ferdh'iq' eer -e went'e.
 His puur'tshaas' was weel bet'er dhan -is rent'e. 256
 And raadzh -e kuud, and plai'en as a whelp,
 In luv'edai'es kuud -e mutsh'el help.
 For dheer was hee not liik a kluist'ereer',
 With a threed'baar'e koop as a poo're skol'cer', 260
 But hee was liik a maister or a poo'pe.
 Of duu'b'l wor'sted was -is sem'ikoop'e,

verbum (See Temp. Pref. to Six-Text ed. of Chaucer, p. 93) that he would coax a trifle out of her. The Ha. reads but oo schoo, on which see Temp. Pref. p. 94. That we are not to take the words literally, but that *schoo* was merely used as a representative of something utterly worthless, which was convenient for the rhyme, just as *pulled hen* 177, or *oyster* 182, and the usual *bean, straw, modern fig, farthing, etc.*, is shewn by its use in the Prologue to

the Wyf of Bathe, 6288 as pointed out by Mr. Aldis Wright,—

The clerk whan he is old, and may nought do

Of Venus werkis, is not worth a scho. 256 we el, so the six MSS., omitted in Ha.

260 So all MSS. except Ca. which reads, as is a scholar, against rhythm. Compare v. 232. See also Temp. Pref. to Six-Text Ed. of Chaucer, p. 100.

And *rounded* as a bell' out of the *presse*.
 Somwhat he lipped, for his wantounnesse, 264
 To mak' his Englisch swet' upon his tonge;
 And in his harping', whan that he hadd' songe,
 His eyghen twinkled in his heed aright.
 As doon the sterres in the frosty night. 268
 This worthy *limitour* was call'd *Huberd*.

11. THE MARCHAWNT.

A *Marchawnt* was ther with a forked berd,
 — In motlee and heygh on hors he sat,
 Upon his heed a *Flawndrisch* bever hat; 272
 His *botes* clapsed fayr' and *fetisly*.
 His *resouns* spaak he ful *solemnely*,
Souning' alwey th' *encrees* of his winnunge.
 iii He wolde the se wer' kept for any thinge 276
 Betwixe Middeburgh and Orewelle.
 Weel coud' he in *eschawunge* scheldes selle,
 This worthy man ful weel his wit bisette;
 Ther wiste no wight that he was in *dette*, 280
 So *staatly* was he of his *governaunce*,
 With his *bargayn's*, and with his *chevisaunce*.
 For sooth' he was a worthy man withalle,
 But sooth to sayn, I n'ooot hou men him calle. 284

12. THE CLERK.

A Clerk ther was of Oxenfoord' also,
 That unto *logik* hadde long' ygo.
 So lene was his hors as is a rake,
 And he n'as not right fat, I undertake, 288
 But loked' holw', and theerto soberly.
 Ful threedbar' was his ov'rest courtepy,
 iii For he hadd' geten him yet no *benefyce*,
 Ne was so worldly for to hav' *offyce*. 292
 For him was lever hav' at his bedd's heed
 — Twenty bokes, clad in blak and reed,
 Of *Aristot'l*, and his *philosophye*,
 Than *robes rich'* or fith'l or *gay sawtrye*. 296

264 his, so the six MSS., omitted in Ha. which therefore required lippede for the metre.

271 motlee, so all but Ha. L. which have motteley. The word is obscure, and may be Welch mudliw, (myd'liu) of a changing colour.

274 All MSS. read he spaak,

but the order of the words is conjecturally altered on account of the rhythm.

275 seun appears in ags. as *son*, (Ettmüller 667) but only as the substantive *song*. As the word has here the form of one derived from the French it is here printed in italics and marked as French.

And ruund'ed as a bel uut of dhe pres'e.
 Sum'what' he lip'sed, for -is wan'tuunnes'e, 264
 To maak -is Eq'lish sweet upon' dhe tuq'e;
 And in -is har'piq, whan dhat hee -ad suq'e,
 His aikh'en twiq'led in -is heed arikht',
 As doon dhe ster'es in dhe frost'ii nikht. 268
 Dhis wurdh'ii li'mii'tuur' was kald Hyy'berd'.

11. Dhe Martshaunt.

A Martshaunt' was dher with a fork'ed berd,
 In motlee' and haik'h on hors -e sat,
 Upon' -is heed a Flaun'drish beever hat; 272
 His boot'es klaps'ed fair and fee'tislii.
 His ree'suuns' spaak -e ful soolem'nelii',
 Suun'iq' alwai' dh- enkre'es of his win'iq'e.
 He wold'e dhe see wer kept for an'ii thi'q'e 276
 Betwik'se Mid'eburkh and Oo'rewel'e.
 Weel kuud -e in es'tshaundzhe sheld'es sel'e.
 Dhis wurdh'ii man ful weel -is wit' biset'e;
 Dher wist'e noo wikht dhat -e was in det'e, 280
 Soo staat'lii was hee of -is guu'ernauns'e,
 With his bargainz' and with -is tshee'vii'sauns'e.
 For sooth -e was a wurdh'ii man withal'e,
 But sooth to sain, Ii n- -oot huu man -im kal'e. 284

12. Dhe Klerk.

A Klerk dher was of Ok'senfoord' al'soo',
 Dhat un'to lodzh'ik had'e loq' igoo'.
 So leen'e was -is hors as is a raak'e,
 And hee n- -as not rikht fat, Ii undertaak'e. 288
 But look'ed hol'w- and dheer'too soo'berlii.
 Ful threed'baar was -is ov'rest kur'tepii,
 For hee -ad get'en -im yet noo benefiis'e,
 Ne was soo wurdlii for to haav offiis'e. 292
 For him was leev'er haav at his bedz heed
 Twent'ii book'es, klad in blak and reed,
 Of Aristot'l-, and his fii'loo'soo'fii'e,
 Dhan roob'es ritsh or fidh'l- or gai sautrii'e. 296

281 staatly, so Co., the rest have estaatly, and Ha. alone omits his, against the metre. If we read: so estaatly, the first measure will be trissyllabic.

288 n'as, so E. Ca. Co., but was Ha. He. P. and L.

291 geten him yet no, E.

He. Ca.; yit geten him no P., nought geten him yet a Ha., geten him no, Co. L.

292 worldly E. He. Co., wordely Ca., wordly P., werdly L., Ne was not worthy to haven an office Ha.

296 gay, so all MSS. except Ha. which omits it.

- But albe that he was a *philosopher*,
 Yet hadd' he but a lytel gold in *cofer*,
 But al that he might' of his frendes hente,
 On bokes and on lerning' he it spente, 300
 And bisily gan for the sowles *preys*
 Of hem, that yaaf him wherwith to *scoleye*.
 iii Of *studie* tok he moost *cur'* and moost heed.
 Not oo word spaak he more than was need; 304
 And that was seyð in *form* and *reverence*,
 And schort and quik, and ful of heygh *sentence*.
Souning' in *moral vertu* was his speche,
 And gladly wold' he lern' and gladly teche. 308

13. THE SERGEAWNT OF LAWE.

- A *Sergeawnt* of Lawe, waar and wys,
 That often hadde ben at the *parrys*,
 Ther was alsoo, ful *rich'* of *excellence*.
Discreet he was, and of greet *reverence*. 312
 He semed' swich, his wordes wer' so wyse.
Justye' he was ful often in *assyse*
 By *paient*, and by *pleyn commissioun*,
 For his *scienc'*, and for his heygh *renoun*; 316
 Of fees and *robes* hadd' he many oon.
 So greet a *pourchasour* was no wheer noon.
 Al was fee *simpel* to him in *effect*,
 iii His *pourechasing* ne mighte not ben *infect*. 320
 iii No wheer so bisy a man as he ther n'as,
 iii And yit he semed' bisier than he was.
 In *termes* hadd' he *caas* and domes alle,
 iii That fro the tym' of king William wer' falle. 324
 Theerto he coud' *endyt'* and mak' a thing.
 Ther coude no wight *pinch'* at his writing'.
 And ev'ry *statut* coud' he *pleyn* by *rote*.
 He rood but hoonly in a *medlee cote*, 328
 Gird with a *ceynt* of silk with *barres* smale;
 Of his *array* tell' I no lenger tale.

297 So the six MSS., the Ha. is unmetrical. The long vowels in *philosopher*, *gold*, *coffer*, are very doubtful, and it is perhaps more probable that short vowels would be correct.

298 "a" is only found in Co. If it is omitted, the first metre becomes defective.

303 moost heed, so the six MSS.; heed Ha.

305 So all the six MSS. (H. has spoke), but Ha. has the entirely dif-

ferent line: Al that he spak it was of heye prudence. The whole of the clerk's character is defective in Ha. In "Cassell's Magazine" for May, 1869, p. 479, col. 1, there occurs the following paragraph: "The following pithy sketch of Oxford life half a dozen centuries ago is from the pen of Wycliffe:—The scholar is famed for his logic; Aristotle is his daily bread, but otherwise his rations are slender enough. The horse he rides is as lean as is a rake, and the rider is no better off. His cheek is hollow, and his coat

But al bee dhat -e wer a fii'loo'soof'er,
 Jet had -e but a lii't'l goold in koof'er,
 And al dhat hee mi'kht of -is frend'es hent'e,
 On book'es and on lern'iq hee it spent'e, 300
 And biz'ili; gan for dhe sooul'es prai'e
 Of hem dhat jaaf -im wheer-with to skolai'e.
 Of stud'ie took -e moost kyyr and moost heed.
 Not oo word spaak -e moor'e dhan was need; 304
 And dhat was said in form and ree-verens'e,
 And short and kwik and ful of haikh sentens'e.
 Suun'iq in moo-raal ver'tyy was -is speetsh'e,
 And glad'li; wold -e lern, and glad'li; teetsh'e. 308

13. Dhe Ser'dzheeaunt of Lau'e.

A Ser'dzheeaunt of Lau'e, waar and wiis,
 Dhat oft'en had'e been at dhe par'viis',
 Dher was alsoo, ful ritsh of ek'selens'e.
 Diskreet -e was and of greet ree-verens'e. 312
 He seem'ed switsh, -is word'es wer soo wiis'e.
 Dzhyyst'is -e was ful oft'en in asiis'e
 Bii paa'tent, and bii plain komis'iuun',
 For his si'ens, and for -is haikh renuun'; 316
 Of feez and roob'es had -e man'ii oon.
 So greet a puur'tshaasuur was noo wheer noon.
 Al was fee sim'pl too -im in efekt',
 His puur'tshaas'iq ne mi'kht'e not been infekt'. 320
 Noo wheer soo biz'i a man as hee dher n- -as,
 And rit -e seem'ed biz'ier dhan -e was.
 In term'es had -e kaas and doom'es al'e,
 Dhat froo dhe tiim of kiq Wil'iaam wer fal'e. 324
 Dheertoo he kuud endiit and maak a thi'q.
 Dher kuud'e noo wi'kht pintsh at his ruiit'iq'.
 And ev'rii staa'tyyt kuud -e plain bii root'e.
 He rood but noom'lii in a med'lee koot'e, 328
 Gird with a saint of silk with bar'es smaal'e;
 Of his arai tel Ii noo leq'ger taal'e.

threadbare. His bedroom is his study. Over his bed's head are some twenty volumes in black and red. Whatever coin he gets goes for books, and those who help him to coin will certainly have the advantage of his prayers for the good of their souls while they live, or their repose when they are dead. His words are few, but full of meaning. His highest thought of life is of learning and teaching.³⁰⁶ This is obviously a modern English translation of the present passage. Is there anything like it in Wycliffe?

306 heygh, so the six MSS., gret Ha. apparently because of heye in the preceding line of that recension.

307 vertu, so the six MSS. manere Ha.

310 at the, so all MSS. except Ha. and P., see *suprà* p. 331, note.

320 infect, so all six MSS., suspecte Ha.

327 pley n, Fr. *plein*, fully compare v. 337.

14. THE FRANKLEYN.

- A Frankleyn was in his *companye*;
 Whyt was his berd, as is the dayesye. 332
 Of his *complexioun* he was *sangwyn*.
 Weel lov'd' he by the morrw' a sop in wyn'.
 To lyven in *delyt*' was e'er his wone,
 For he was EPICURUS owne sone, 336
 That heeld *opinioun* that *pleyn delyt*
 Was *verrayly felicitye* *perfyte*.
 An housholdeer, and that a greet was he;
Saynt Juliaan he was in his *cuntries*. 340
 iii His breed, his ale, was alwey after oon;
 A bettr' *envynged* man was no wheer noon.
 iii Withoute bake mete was ne'er his hous
 Of fisch' and flech', and that so *plentevous* 344
 It snewed in his hous of met' and drinke
 Of alle deyntees that men coude thinke.
 After the sondry *sesouns* of the year',
 So *chaunged*' he his met' and his *soupeer*. 348
 iii Ful many a fat *partrich* hadd' he in *meue*,
 iii And many a *breem* and many a *luc*' in *steue*.
 Woo was his cook, but if his *sawce* were
Poynewant and scharp, and redy al his gere. 352
 His *tabel dormaunt* in his hall' alwey
 Stood redy *cover*'d al the longe day.
 At *sessiouns* theer was he lord and *syre*.
 Ful ofte tym' he was knight of the schyre. 356
 An *anlas* and a *gipseer* al of silk
 Heng at his girdel, whyt as morne milk.
 A shyrreev hadd' he been, and a *countour*.
 Was no wheer such a worthy *vavasour*. 360

15. 16. 17. 18. 19. THE HABERDASCHEER, CARPENTEEER, WEBBE,
DYEER, AND TAPICEER.

- An Haberdascheer, and a *Carpenteeer*,
 A Webb', a Dyeer, and a *Tapiceer*,
 Wer' with us eek, clothed in oo *liv'ree*,
 Of a *solemn*' and greet *fraternite*. 364
 Ful fresch and new' her' ger' apyked was;
 Her' knyfes wer' *ychaped* not with bras,
 But al with silver wrowght ful clen' and weel
 Her' girdles and her' *pouches* ev'ry deel. 368
 Weel seemed' eech of hem a fayr *burgeys*
 To sitten in a yeld'hall' on the *deys*.

334 sop in wyn, so all six
 MSS., sop of wyn Ha.

348 So all six MSS. Ha. reads:
 He chaunged hem at mete and at
 soper, which is clearly wrong:

14. Dhe Fraqk'elain.

A Fraqk'elain was in -is kum'panii'e;
 Whiit was -is berd, as is dhe dai'esii'e. 332
 Of -is komplek'siun' -e was saggwii'n.
 Weel luvd -e in dhe morn a sop in wiin.
 To liiv'en in deliit' was eer -is wuun'e,
 For hee was Ee'piikyy'rus ooun'e suun'e, 336
 Dhat heeld oop'i'niun' dhat plain deliit'
 Was ver'ailii' fee'lii'sii'tee' per'fiit'.
 An huus'hooldeer', and dhat a greet was hee;
 Saint Dzhyy'liian' -e was in his kun'tree'. 340
 His breed, his aale, was al'wai after oon;
 A bet'r- enviin'ed man was noo wheer noon.
 Withuut'e baak'e meet'e was neer -is huus
 Of fish, and flesh, and dhat soo plent'evuus 344
 It sneu'ed in -is huus of meet and driik'e
 Of al'e dain'tees dhat men kuud'e thiik'e.
 After dhe sun'drii' see'suunz' of dhe Jeer,
 Soo tshaundzh'ed hee his meet and his suupeer'. 348
 Ful man'i a fat partritsh' -ad hee in myy'e,
 And man'i a breem and man'i a lyys in styy'e.
 Woo was -is kook, but if -is saus'e weere
 Puin'aunt' and sharp, and reed'ii' al -is geere. 352
 His taa'b'l dor'maunt' in -is hal alwai'
 Stood red'ii' kuv'erd al dhe loqe dai.
 At ses'iuunz' dheer was -e lord and siir'e.
 Ful oft'e tiim -e was kniikt of dhe shiir'e. 356
 An an'las and a dzhip'seer' al of silk
 Heq at -is gir'd'l, whiit as morn'e milk.
 A shiir'reev' had -e been, and a kun'tuur.
 Was noo wheer sutsh a wurdh'ii' vaa'vaasuur'. 360

15. 16. 17. 18. 19. Dhe Hab'erdash'eer, Karpenteer,
 Web'e, Diir'eer, and Taa'pii'seer.

An Hab'erdash'eer and a Karpenteer',
 A Web, a Diir'eer, and a Taa'pii'seer',
 Weer with us eek, cloodh'ed in oo liiv'ree', 364
 Of a soo'lem'n- and greet fraa'ter'niitee'.
 Ful fresh and neu -er geer apiik'ed was;
 Her kniif'es wer itshaaped not with bras,
 But al with sil'ver wouk'wht ful kleen and weel
 Her gir'dles and -er puutsh'es ev'rii' deel. 368
 Weel seem'ed eetsh of hem a fair bur'dzhais'
 To sit'en in a jeld'hal on dhe dais.

362 dyeer, so the six MSS., Harl.

- Ev'rich for the wisdom that he can,
 Was schaaply for to been an alderman. 372
 For *catel* hadde they ynough and *rente*,
 And eek her' wyfes wold' it weel *assente*;
 And elles *certayn* weren they to *blame*.
 It is ful fayr to be yclept *Madame*, 376
 And goo to *vigilyes* al bfore,
 And haan a *mantel* really yborc.

20. THE COOK.

- A Cook they hadde with hem for the nones,
 To *boyle* chicknes with the mary bones, 380
 And *poudre-marchawnt* tart, and *galingale*.
 Weel coud' he know' a drawght of London ale.
 He coude *roost'*, and *sceth'*, and *broyl'*, and *frye*,
 Make *mortrewes*, and weel bak' a *pys*. 384
 But greet harm was it, as it semed' me,
 That on his schinn' a *mormal* hadde he;
 For *blankmangeer* that maad' he with the beste.

21. THE SCHIPMAN.

- A Schipman was ther, woning' fer by weste; 388
 For owght I woot, he was of Dertemouthe.
 He rood upon a *rouncy* as he couthe,
 — In a gown of falding' to the kne.
 A *daggeer* hanging' on a *laas* hadd' he 392
 About' his neck' under his arm adoun.
 iii The hote sommer hadd' mad' his hew al broun;
 And *certaynly* he was a good felawe.
 iii Ful many a drawght of wyn hadd' he ydrawe 396
 From *Bourdewox*-ward, whyl that the chapman sleep.
 Of *nyce conscienc'* he took no keep.
 If that he fowght, and hadd' the heygher hand,
 iii By water he sent' hem hoom to ev'ry land'. 400
 But of his craft to reken weel the tydes,
 His stremes and his *dawnger's* him bisydes,

371 everich, so all six MSS., every man Ha.

375 weren they, so, or: they were, read all the six MSS., hadde they be Ha.

380 mary, ags. *nearh*, the *h* becoming unusually palatalised to *-y*, instead of labialised to *-we*; the parenthetical remark p. 254, n. 1. is wrong.

381 *poudre-marchawnt*, see Temp. Pref. to the Six-Text Ed. o: Chaucer, p. 96.

386 Prof. Child reads: That on his schyne—a mormal hadd' he, *supra*

p. 363. The Six MSS. render many of the examples there cited suspicious, see note on v. 120 for v. 1141. In v. 1324, He. reads moot, and the line may be: Withouten dout' it mote stonden so. For v. 1337 all six MSS. read: And let him in his prisoun stille dwelle. For v. 2286 all six MSS. read: But hou sche did' hir' ryt' I dar not telle. For v. 2385, E. He. Ca. Co. L. read: For thilke peyn' and thilke hote fyr. In v. 2714, E. He. Ca. have: Somm' hadden salves and somm' hadden charmes. For v. 1766,

Ev'ritsh for dhe wis'doom dhat -e kan,
Was shaap'lii for to been an al'derman. 372
For kat'el had'e dhai inuukwh' and rent'e,
And eek -er wiif'es wold it weel asent'e;
And el'es sert'ain weeren dhai to blaam'e.
It is ful fair to be i'klept' Ma a' d a a m'e, 376
And goo to viidzhiili'es al bi'foore,
And haan a man't'l ree'ali' i'boore.

20. Dhe Kook.

A Kook dhai had'e with -em for dhe noon'es,
To buile tshik'nes with dhe mar'i boon'es, 380
And puud're mart'shaunt' tart, and gaa'liggaal'e.
Weel kuud -e knoou a draukwht of Lun'dun aal'e.
He kuud'e roost, and seedh, and bruil, and frii'e, 384
Maak'e mortreues, and weel baak a pi'e.
But greet harm was it, as it seem'ed mee,
Dhat on -is shin a mor'maal' had'e hee;
For bla'k'maan'dzheer dhat maad -e with dhe best'e.

21. Dhe Ship'man.

A Ship'man was dher, wuun'iq fer bii west'e; 388
For oukwht li woot, he was of Der'temuuth'e.
He rood upon a ruun'sii as -e kuuth'e,
In a guun of fal'diq too dhe knee.
A dag'eer haq'iq on a laas -ad hee 392
Abuut -is nek un'der -is arm aduun'.
Dhe hoot'e sum'er -ad maad -is heu al bruun;
And sertainlii -e was a good fel'au'e.
Ful man'i a draukwht of wiin -ad hee idrau'e 396
From Buur'deus-ward, whii dhat dhe tshap'man sleep.
Of niis'e kon'siens' -e took noo keep.
If dhat -e foukwht and had dhe haikher hand,
Bii waa'ter -e sent -em hoom to ev'rii land, 400
But of -is kraft to rek'en weel dhe tiid'es,
His streem'es and -is daun'dzherz him bisiid'es,

E. He. Ca. Co. L. read: The trespass of hem both' and cek the cause. For v. 4377 (in which read *sight* for *night*) E. He. Pe. L. practically agree with Ha., but it would be easy to conjecture: Til that he hadd' al thilke sight' yseyn. For v. 4405, E. reads *rotie* in place of *rote*, but He. Pe. L. agree with Ha. The form *rotie*, which is more ancient, see Stratmann's Dict. p. 467, would save the open vowel. It is possible, therefore, that the other examples of open e preserved by caesura in Chaucer, would disappear if more

MSS. were consulted. Again, in the first line cited from Gower, i. 143, we see in the example below that two MSS. read: he wept' and with ful woful teres. The practice is therefore doubtful. But final e often remains before *he* at the end of a line in Gower, *suprà*, p. 361, art. 76, a. Hence the division in the text is justified. There is no variety in the readings of the MSS.

387 that maad' he, so all six MSS. Ha. he made.

391 falding, =vestis equi vil-

- His herbergh and his moon', his loodmanage,
 Ther was noon swich from Hulle to *Cartage*. 404
Hardy he was, and wys to undertake;
 iii With many a *tempest* hath his berd been schake.
 He knew weel al the haven's, as they were,
 From Scotland to the *caap*' of *Fynistere*, 408
 And every cryk' in *Bretayn*' and in *Spayne*;
 His *barg*' ycleped was the *Mawdeleyn*.

22. THE DOCTOUR OF PHISYK.

- Ther was also a *Doctour* of *Phisyk*,
 In al this world ne was ther noon him lyk 412
 To spek' of *phisyk* and of *surgerye*;
 For he was grounded in *astronomye*.
 He kept' his *pacient* a ful greet deel
 In *houres* by his *magyk natureel*. 416
 — Weel could' he *fortunen* th' *ascendent*
 Of his *images* for his *pacient*.
 He knew the *caws*' of ev'ry *maladye*,
 Wer' it of coold, or heet', or *moyst*, or drye, 420
 And wheer *engendred* and of what *humour*;
 He was a *verray parfyt practisour*.
 The *caws*' yknow', and of his harm the rote,
 Anoon he yaaf the syke man his bote. 424
 + Ful redy hadd' he his *apotecaryes*
 + To send' him *drogges*, and his *letuaryes*,
 For eech' of hem mad' other for to winne;
 Her' frendschip' was not newe to beginne. 428
 -- Weel knew he th' old' *Esculapius*,
 And *Deiscorides*, and eek *Rufus*;
 Oold *Ipocras*, *Haly*, and *Galien*;
Serapion, *Razys*, and *Avycen*; 432
 iii *Averrois*, *Damascen*, and *Constantyn*;
Bernard and *Gatesden* and *Gilbertyn*.
 iii Of his *dyete mesurabel* was he,
 For it was of noon *superfluite*, 436
 But of greet *nourisching*' and *digestybel*.
 iii His *studie* was but lytel on the *Bybel*.
 In *sanguyn* and in *pers* he clad was al,
 Lyned with *taffata* and with *sendal*'. 440
 And yit he was but *esy* in *dispence*;
 He kepte that he wan in *pestilence*.
 For goold in *phisyk* is a *cordial*;
 Theerfor' he loved' goold in *special*. 444

His herberkh and -is moon', -is lood'manaadzh'e,
 Dher was noon switsh from Hul'e too Kartaadzh'e. 404
 Hard'ii he was, and wiis to undertaak'e;
 With man'i a tem'pest hath -is berd been shaak'e.
 He kneu weel al dhe naa'venz, as dhai weer'e,
 From Skotland too dhe kaap of Fii'nisteer'e, 408
 And ev'rii kriik in Bree'tain and in Spain'e;
 His baardzh iklep'ed was dhe Mau'delain'e.

22. Dhe Dok'tuur of Fii'ziik'.

Dher was alsoo' a Dok'tuur of Fii'ziik',
 In al dhe world ne was dher noon -im liik 412
 To speek of fii'ziik' and of sur'dzherii'e;
 For hee was gruund'ed in astroo'nomii'e.
 He kept -is paa'sient' a ful greet deel 416
 In uures bii -is maa'dzhiik naa'tyy'reel'.
 Weel kuud hee fortyyn'en dh- as'endent'
 Of his imaadzh'es for -is paa'sient'.
 He kneu dhe kauz of ev'rii maa'laadii'e, 420
 Weer it of koold, or heet, or muist, or drii'e,
 And wheer endzhen'dred, and of what hyy'muur';
 He was a ver'ai par'fii't prak'tii'suur'.
 Dhe kauz iknoou', and of -is harm dhe root'e, 424
 Anoon' -e yaaf dhe siik'e man -is boot'e.
 Ful red'ii had -e his apoo'tee'kaa'ries
 To send -im droges, and -is let'yy'aa'ries,
 For eetsh of hem maad udher for to win'e;
 Her frend'shiip was not neur'e too begin'e. 428
 Weel kneu hee dh- oold Es'ky'laa'pius,
 And Dee,iskor'idees, and eek Ryy'fus;
 Oold Ipokras', Haalii', and Gaa'leen';
 Seraa'pioon', Raa'ziis' and Aa'viiseen'; 432
 Avero'is, Daamaseen' and Konstantiin';
 Bernard' and Gaa'tesden' and Gilbertiin'.
 Of his diieet'e mee'syy'raa'b'l was hee,
 For it was of noon syy'perfly'itee, 436
 But of greet nuur'ishiq' and dii'dzhes'tii'b'l.
 His stud'ie was but lii't'l on dhe Bii'b'l.
 In saq'gwiin' and in pers -e klad was al, 440
 Lii'ned with taf'ataa' and with sendal'.
 And jit -e was but eez'ii in dispens'e;
 He kept'e dhat -e wan in pestilens'e.
 For goold in fii'ziik' is a kordial';
 Dheerfoor -e luv'ed goold in spes'ial'. 444

429 Suprà p. 341, l. 2 and 13, I treated this as a full line, thinking that the e in olde was to be preserved. Further consideration induces me to mark the line as having an imperfect

first measure, and to elide the e in the regular way, on the principle that exceptional usages should not be unnecessarily assumed.

23. THE WYF OF BATHE.

- A good Wyf was ther of bisyde Bathe,
 But sche was somdeel deef, and that was skathe.
 Of cloothmaking' sche hadde swich an *hawnt*,
 Sche *passed*' hem of *Ypres* and of *Gawnt*. 448
 In al the *parisch*' wyf ne was ther noon,
 That to th' offring' bifoorn her schulde goon,
 iii And if ther dide, *certayn* so wrooth was sche,
 That sche was out of alle *charite*. 452
 Hir' *keverchefs* ful *fyne* wer' of grounde;
 iii I durste swere they weygheden ten pounde
 That on a Sonday wer' upon hir' heed.
 Hir' hosen weren of *fyne scarlet* reed, 456
 Ful *streyt*' ytey'd, and schoos ful *moyst*' and newe.
 Boold was hir' *saac*', and fayr, and reed of hewe.
 Sche was a worthy woman al hir' lyfe.
 Housbond's at chirche dore sche hadd' fyfe, 460
 Withouten other *company*' in youthe,
 But theerof nedeth nowght to speke as nouthe.
 iii And thryes hadd' sche been at Jerusalem;
 iii Sche hadde *passed* many a *strawnge* streem; 464
 At Rome sche hadd' been, and at *Boloyne*,
 In *Galic*', at *saynt Jaam*', and at *Coloyne*.
 Sche couthe moch' of wandring' by the weye.
 Gaat-tothed was sche, sooth'ly for to seye. 468
 Upon an *ambleer esely* sche sat,
 Ywimpled weel, and on hir' heed an hat
 As brood as is a *boucleer* or a *targe*;
 A foot-mantel about' hir' hippes *large*, 472
 And on hir' feet a *payr*' of spores *scharpe*.
 In felawship' weel coud' sche lawgh' and *carpe*.
 iii Of *remedy's* of love sche knew *parchawnce*,
 For sche coud' of that *art* the oolde *dawnce*. 476

24. THE PERSOUN.

- A good man was ther of *religioun*,
 And was a *pore Persoun* of a toun;
 But *rich*' he was of holy thougth and werk',
 He was also a lerned man, a clerk, 480
 That Cristes gospel gladly wolde *preche*;
 His *parischens* devoutly wold' he teche.

452 was out, so the six MSS.,
 was thanne out Ha.

453 ful fyne wer', so the six
 MSS., weren ful fyne Ha.

454 weygheden, weyghede
 Ha. weyeden E. He. Co. P.,

weyedyn Ca. weiden L., hence
 all but Ha. give the plural en.

460 So E. He. Ca., atte, Co. Pe.,
 att þe L., housbondes atte
 chirche dore hadde sche
 fyfe Ha. which is unmetrical.

23. Dhe Wiif of Baath'e.

A good wiif was dher of *bisiid'e* Baath'e,
 But shee was sum-deel deef, and dhat was skaath'e.
 Of klooth-maak'iq' shee had'e switsh an haunt,
 Shee pas'ed hem of *Ii'pres* and of Gaunt. 448
In al dhe par'ish wiif ne was dher noon,
 Dhat too dh- ofriq' bifoorn' -er shuld'e goon,
 And if dher did'e, ser'tain' so *rwooth* was shee,
 Dhat shee was uut of al'e tshaa'rii'tee'. 452
Hii'r kev'ertshefs ful *fiin'e* weer of gruund'e;
Ii durst'e sweer'e dhai waikh'eden ten puund'e
 Dhat on a Sun-dai weer upon' -iir heed.
Hii'r hooz'en weer'en of *fiin* skar'let reed, 456
 Ful strait itaid', and shooz ful muist and neur'e.
 Boold was -iir faas, and fair and reed of neur'e.
 Shee was a wurdh'ii wum'an al -iir liif'e.
Huus-bondz' at tshirtsh'e door'e shee had *fiif'e*, 460
 Withuut'en udh'er kum'panii' in juuth'e,
 But dheer'of need'eth nouk'wht to speek as nuuth'e.
 And thrii'es had shee been at Dzheeruu'saleem';
 Shee had'e pas'ed man'i a straundzh'e stream; 464
 At Room'e shee had been, and at Bolooi'n'e,
In Gaa'liis', at saint Dzhaam, and at Kolooi'n'e.
 Shee kuuth'e mutsh of wand'riq' bii dhe wai'e.
 Gaat-tooth'ed was shee, sooth'lii for to sai'e. 468
 Upon' an am'bleer' ees'clii shee sat,
 Iwim'pled weel, and on -iir heed an hat
 As brood as is a buk'leer' or a tardzh'e;
 A foot-mantel' abuut' -iir hip'es lardzh'e, 472
 And on -iir feet a pair of spuures sharp'e.
In fel'aushiiip weel kuud shee laug'wht and karp'e.
 Of rem'ediiz' of luuv'e shee kneu partshauns'e,
 For shee kuud of dhat art dhe oold'e dauns'e. 476

24. Dhe Persuun'.

A good man was dher of *relii'dzhiuun'*,
 And was a poor'e Persuun' of a tuun;
 But ritsh -e was of hool'ii thouk'wht and werk,
 He was alsoo' a lern'ed man, a klerk, 480
 Dhat Krist'es gosp'el glad'lii wold'e preetsh'e;
 His par'ishenz devuut'lii wold -e teetsh'e.

465, 466. Boloyn'e, Coloyne. The MSS. are very uncertain in their orthography. Boloyn'e, Coloyne, appear in Ha. He. Ca., and Boloyn'e in P. L., but we find Boloigne, Coloigne in E. Co., Coloigne in P., and Coloyngne in L. The

pronunciation assigned is quite conjectural. The following pronunciations of the termination are also possible: (-oon'e, -oon'e, -uin'e, uiq'ne). The modern Cockneyism (Buloin', Keloin') points to (-uin'e). See also note on v. 634.

- Benygn'* he was and wonder *dylygent*,
 And in *adversite* ful *pacient*; 484
 And such he was *yproved* ofte sythes.
 Ful looth wer' him to curse for his tythes,
 But rather wold' he yeven out of *doute*,
 Unto his *pore parischens* aboute, 488
 Of his offring', and eek of his *substawnce*.
 He coud' in lytel thing haan *suffisaunce*.
 iii Wyd was his *parisch*, and houses fer asonder, 492
 But he ne lafte not for reyn ne thonder,
 In sikness' nor in *meschief'* to *visyte*
 The ferrest in his *parisch'*, moch' and lyte,
 Upon his feet, and in his hond a staaf.
 This *nob'l ensampel* to his scheep he yaaf, 496
 That first he wrowght', and after that he tawghte.
 Out of the gospel he tho wordes cawghte,
 And this *figur'* he added' eek therto,
 That if goold ruste, what schuld' yren do? 500
 For if a preest be foul, on whom we truste,
 No wonder is a lewed man to ruste;
 And scham' it is, if a preest take kep',
 A schyten schepperd and a clene scheep; 504
 Weel owght' a preest *ensampel* for to yive
 By his cleanness', hou that his scheep schuld' live.
 iii He sette not his *benefyce* to hyre,
 And left' his scheep *encomb'red* in the myre, 508
 ai And ran to London', unto *saynt* Powles,
 iii To seken him a *chawnterye* for sowles,
 Or with a bretherheed to been withhoolde;
 But dwelt' at hoom, and kepte weel his foolde, 512
 + So that the wolf ne mad' it not *miscarye*.
 +iii He was a schepperd, and not a *mercenarye*;
 And though he holy wer' and *vertuous*,
 He was to sinful man nowght *dispitous*, 516
 Ne of his speche *dawngereous* ne *dygne*,
 But in his teching' *discreet* and *benygne*.

493 *meschief*, so all but Ca., which reads *myschif*, and L. which has *meschef*. The old French forms, according to Roquefort, are *meschef*, *meschief*, *meschiés*, *meschiez*, *meschief*, *meschiés*.

499 eek E. He. Co. P., yit Ha., omitted in Ca., L. has eke he haddede. Ca. reads addede, but no particular value is attachable to its final e's.

503 So all six MSS., if that Ha. in which case *tak'* must be read,

but the omission of the subjunctive e is harsh. See the same rhyme and phrase in the imperative and hence *tak* not *take*, 6014, 13766. Only Ca., which is generally profuse in final e, reads *kep* *schep*, in accordance with ags. analogy.

504 It is a curious example of the different feeling attached to words of the same original meaning, that *schyten* is banished from polite society, and *dirty* (ags. *drītan* *cacare*) is used without hesitation.

- Beni'n -e was and wund'er dii'lūdzhent;
 And in advers'itēe ful paa'sient, 484
 • And sutsh -e was ipreev'ed oft'e siidh'es.
 Ful looth wer him to kurs'e for -is tiidh'es,
 But raadher wold -e jeev'en uut of dunt'e,
 Untoo -is poore par'ishenz abut'e, 488
 Of his offiq', and eek of his substauns'e.
 He kuud in lii't'l thiȝ naan syf'isauns'e.
 Wiid was -is par'ish, and huus'es fer asund'er,
 But hee ne laft'e not for rain ne thund'er, 492
 In sik'nes nor in mes'tsheef to vii'ziit'e
 Dhe ferrest in -is par'ish, mutsh and liit'e,
 Upon -is feet, and in -is hond a staaf.
 Dhis noo-bl-ensam'p'l too -is sheep -e jaaf, 496
 Dhat first -e rwouk'wht, and after dhat -e tauk'wht'e.
 Uut of dhe gos'pel hee dho word'es kauk'wht'e,
 And dhis fii'gyr' -e ad'ed eek dhertoo',
 Dhat if goold rust'e, what shuld iir'en doo? 500
 For if a preest be fuul, on whoom we trust'e,
 Noo wund'er is a leu'ed man to rust'e;
 And shaam it is, if a preest taak'e keep,
 A shii'ten shep'erd and a kleen'e sheep; 504
 Weel ouk'wht a preest ensam'p'l for to jii'v'e
 Bii his kleen'nes, huu dhat -is sheep shuld lii'v'e.
 He set'e not -is ben'efiis'e to hii're,
 And left -is sheep enkum'bred in dhe mii're, 508
 And ran to Lun'dun, un'to saa'nt Pooul'es,
 To seek'en him a tshaun'teris'e for sooul'es,
 Or with a breedh'erneed to been withhoold'e;
 But dwelt at hoom, and kept'e weel -is foold'e, 512
 Soo dhat dhe wulf ne maad it not miskar'ie.
 He was a shep'erd, and not a mersenari'e;
 And dhoouk'wht -e hool'ii weer and ver'tyy'uus',
 He was to sin'ful man nouk'wht dis'pii'tuus', 516
 Nee of -is speetsh'e daun'dzheruus' ne diin'e,
 But in -is teetsh'iq dis'kreet' and beni'n'e.

509 saynt, Ha. and Co. add an e, thus seynte for the metre, the other five MSS. have no e, and the grammatical construction forbids its use. Tyrwhitt, to fill up the number of syllables, rather than the metre, (for he plays havoc with the accentual rhythm which commentators seem to have hitherto much neglected, but which Chaucer's ear must have appreciated,) changes the first *t* into *un*to, thus: And ran unto London, unto Seint Poules, but this is not sanctioned by any MS. The solution

of the difficulty is to be found in the occasional dissyllabic use of saynt, see note on v. 120. Powles, see *supra* pp. 145, 148. Mr. Gibbs mentions that he knows (*Poolz*) as an existent Londoner's pronunciation in the phrase *as old as Fowl's*, see *supra* p. 266 for Chaucer's usage.

512 folde, the final e is exceptional, *supra* p. 384, col. 1.

514 and not a, so all the six MSS., and no Ha.

- To drawen folk to heven by fayrnesse,
 By good *ensampel*, was his besinesse; 520
 But it wer' eny *persoun obstinaat*,
 Whatso he wer' of heygh or low' *estlaat*,
 Him wold he snibbe scharply for the nones.
 iii A bett're preest I trowe ther nowheer noon is. 524
 iii He *wayted'* after no *pomp'* and *reverence*,
 Ne maked' him a *spyced conscience*,
 But Cristes loor', and his apostel's twelve,
 He tawght', and first he folwed' it himselve. 528

25. THE PLOUGHMAN.

- With him ther was a Ploughman, was his brother,
 iii That hadd' ylaad of dong' ful many a fother.
 A trewe swinker and a good was he,
 Living' in *pees* and *perfyte charite*. 532
 God lov'd' he best with al his hole herte
 At alle tymes, thowgh him gam'd' or smerte,
 And than his neyghebour right as himselve.
 He wolde thresch' and therto dyk' and delve, 536
 iii For Cristes sake, for ev'ry *pore* wighte,
 Withouten hyr', if it lay in his mighte.
 But tythes *payed'* he ful fayr' and weel,
 Booth of his *prop're* swink', and his *catel*. 540
 In a *tabbard'* he rood upon a mecr'.

Ther was also a recv' and a milleer,
 A *somnour* and a *pardoneer* also,
 A *mauncip'l* and myself, ther wer' no mo. 544

26. THE MILLEER.

- The Milleer was a *stout* carl for the nones,
 Ful big he was of *brawn*, and cek of bones;
 That *prevyed'* weel, for ov'ral ther he cam,
 At wrastling' he wold' hav' away the ram. 548
 He was schort schuld'rd, brood, a thikke knarre,
 iii Ther n'as no dore that he n'old' hecv' of harre
 Or breek' it with a renning' with his heed. 552
 His berd as ony sou' or fox was reed,
 And theerto brood, as thowgh it wer' a spade.
 Upon the cop right of his noos' he hadde

To drau'en folk to hev'en bi fairnes'e,
 Bi good ensam'p'l, was -is besines'e; 520
 But it wer en -is per-suun' ob'stinaat',
 What'soo' -e weer of naikh or loou estaat',
 Him wold -e sn'b'e sharp'li' for dhe noon'es.
 A bet're preest I troou'e dher noo wheer noon is. 524
 He wait'ed aft'er no pomp and reev'erens'e,
 Ne maak'ed him a sp'is'ed kon'siens'e,
 But Krist'es loor, and his apos't'lz twelv'e,
 He tauk'ht, and first -e fol'wed it himselv'e. 528

25. Dhe Pluukwh'man.

With him dher was a Pluukwh'man, was -is brood'her,
 Dhat had ilaad' of duq ful man'i a food'her.
 A treu'e swi'q'ker and a good was hee,
 Liiv'iq in pees and per'fyt' tshaa'riitee'. 532
 God luvd -e best with al -is hool'e hert'e
 At al'e tiim'es, dhooukwh -im gaamd or smert'e,
 And dhan -is naikh'ebuur' rikht as -imself'e.
 He wold'e thresh and dher-too diik and delv'e, 536
 For Krist'es saak'e, for ev'rii poo're wikht'e,
 Withuut'en hiir, if it lai in -is mikht'e.
 But tiidhes paid hee ful fair and weel,
 Booth of -is prop're swi'qk and -is kat'el'. 540
 In a tab'ard' -e rood upon' a meer.

Dher was alsoo' a reev and a mil'eer',
 A sum'nuur' and a par'doneer' alsoo',
 A maun'sipl- and misself', dher weer no moo. 544

26. Dhe Mil'eer'.

Dhe Mil'eer' was a stuut karl for dhe noon'es,
 Ful bi'g -e was of braun, and eek of boon'es;
 Dhat preev'ed weel, for ov'ral' dheer -e kaam,
 At rwast'liq hee wold haav'awai' dhe ram. 548
 He was short shuld'ed, brood, a thik'e knar'e,
 Dher n- -as no doore dhat hee n- -old heev of nar'e
 Or brek it with a ren'iq' with -is heed.
 His berd as on'ii suu or foks was reed, 552
 And dheer-to brood, as dhooukwh it weer a spaa'de.
 Upon' dhe kop rikht of -is nooz -e had'e

sure; his Ha. against the metre; the omission of the relative *that* before these words is curious, so that Ca. may have the proper reading.

537 for E. Ca. Co. P. L., with Ha. He.

541 *meer'*, I have preferred eliding the essential final *e* (suprà, p. 388,

col. 1), to adding a superfluous *e* to *milleer*, suprà p. 254. The Icelandic *mar*, Danish *mær*, Swedish *märr* also omit the *e*. Chaucer generally uses the form *mare*.

548 *hav' away*, Co. P. L., *ber' away* Ha., *hav' alwey* E. He. Ca.

- A wert', and thecron stood a tuft of heres,
 Reed as the berstles of a soues eres. 556
 His nose-thirles blake wer' and wyde.
 A swerd and *boucleer* baar he by his syde.
 His mouth as greet was as a greet *fornays*.
 iii He was a *jangleer* and a *goliardeys*, 560
 And that was moost of sinn' and *harlotryes*.
 Weel coud' he stele corn, and tollen thryes;
 And yet he hadd' a thomb' of goold', *parde*!
 A whyt *cool'* and a blew hood wered he. 564
 A baggepype coud' he blow' and *soune*,
 And theerwithal he browght us out of toune.

27. THE MAWNCEPEL.

- iii A *gentel Mawncipel* was ther of a *tempel*,
 Of which *achatours* mighten tak' *exempel*, 568
 For to be wys in bying' of *vitaille*.
 For whether that he *pay'd* or took by *taille*,
 Algat' he *wayted*' so in his *achate*
 That he was ay bifoorn and in good *state*. 572
 Nou is not that of God a ful fayr *grace*,
 That swich a lewed mannes wit schal *pace*
 The wisdom of an heep of lern'de men?
 Of *mayster's* hadd' he moo than thryes ten, 576
 That wer' of law' *expert* and *curious*,
 Of which ther wer' a *doseyn* in that hous',
 Worthy to be stiwards of *rent*' and londe
 Of any lord that is in Engelonde, 580
 To mak' him lyve by his *propre* good'
 In *honour dett*'lees, but he were wood,
 Or lyv' as *scarsly* as he can *desyre*;
 And *abel* for to helpen al a schyre 584
 In any *caas*' that mighte fall' or happe;
 iii And yit this *mawncipel* sett' her' aller cappe.

28. THE REVE.

- iii The Reve was a sclender *colerik* man,
 His berd was schav' as neygh as e'er he can. 588
 His heer was by his eres *round* yschoorn.
 His top was docked lyk a preest bifoorn.
 Ful longe wer' his legges and ful lene, 592
 Ylyk a staaf, ther was no calf ysene.
 Weel coud' he keep a *gerner* and a binne,
 Ther was noon *auditour* coud' on him winne.
 Weel wist' he by the drought,' and by the reyne,
 The yeelding of his seed' and of his *grayne*. 596

559 *fornays*, see note to v. 202.569 *bying*, see *suprà*, p. 285.564 a blew. E. He. Ca., Co., a
blewe P. L., blewe Ha.572 *state* has only a *dative e*.

A wert, and dheer'on stood a tuft of heeres,
 Reed as dhe bers'tles of a suures eer'es. 556
 His nooz'e thirl'es blaak'e wer and wūd'e.
 A swerd and buk'leer' baar -e bii -is siid'e.
 His muuth as greet was as a greet for'nais'.
 He was a dzhaq'leer' and a gool'iardais', 560
 And dhat was moost of sin and har'lotrii'es.
 Weel kuud -e steel'e korn, and tol'en thrii'es;
 And yet -e had a thuumb of goold, pardee'!
 A whiit koot and a bleu hood weered hee. 564
 A bag'epi'pe kuud -e bloou and suun'e,
 And dheer'withal' -e brouk'wht us uut of tuun'e.

27. Dhe Maun'sip'l.

A dzhen't'l Maun'sip'l was dher of a tem'p'l,
 Of whitsh atshaa'tuurz' mi'kht'en taak eksem'p'l, 568
 For to be wiis in bii'iq of viitail'e.
 For whedher dhat -e paid or took bii' tail'e,
 Algaat' -e wait'ed soo in his atshaat'e, 572
 Dhat hee was ai bi'foorn' and in good staat'e.
 Nuū is not dhat of God a ful fair graas'e,
 Dhat switsh a leu'ed man'es wit shal paas'e
 Dhe wis'doom of an heep of lern'de men?
 Of maisterz' had -e moo dhan thrii'es ten, 576
 Dhat wer of lau ekspert' and kyy'rii'us',
 Of whitsh dher weer a duu'zain' in dhat huus,
 Wurdh'i to bee stiwardz' of rent and lond'e
 Of an'ii lord dhat is in Ege'lond'e, 580
 To maak -im liiv'e bii -is prop're good
 In on'uur det'lees, but -e weer'e wood,
 Or liiv' as skars'lii as -e kan desiire;
 And aa'b'l for to help'en al a shiir'e 584
 In an'ii kaas dhat mi'kht'e fal or hap'e;
 And jii dhis maun'sip'l set -er al'er kap'e.

28. Dhe Reeve.

Dhe Reeve was a sklend'er kol'erik man,
 His berd was shaav as nai'ih as eer -e kan. 588
 His heer was bii -is eer'es ruund tshoorn'.
 His top was dok'ed liik a preest bi'foorn'.
 Ful loqe weer -is leg'es and ful leen'e,
 Liik a staaf, dher was no kalf tseen'e. 592
 Weel kuud -e keep a gern'er and a bin'e,
 Dher was noon au'dituur' kuud on -im win'e.
 Weel wist -e bii dhe druk'wht, and bii dhe rain'e,
 Dhe reeld'iq of -is seed and of -is grain'e. 596

578 that, so all six MSS., an Ha. 592 ylyk, so all six MSS., al
 587 sclender, all seven MSS. like Ha., ysene, suprā, p. 357,
 agree in the initial scl or skl. art. 61.

- His lordes scheep, his neet, his deyerye,
 His swyn, his hors, his stoor, and his *pultrye*,
 Was hoolly in this reves governing',
 And by his *covenawnt*' yaf the rek'ning, 600
 Sin that his lord was twenty yeer of age;
 iii Ther coude no man bring' him in *arrerage*.
 Ther n'as *ballyf*, ne herd', ne other hyne,
 That they ne knew' his sleyght and his *covyns*; 604
 They wer' adraad of him, as of the dethc.
 His woning was ful fayr upon an hethe,
 With grene trees yschadwed was his *place*.
 He coude better than his lord *purchace*. 608
 Ful *rich*' he was *astored* *prively*,
 His lord weel couth' he plesse *subtilly*,
 To yeev' and leen' him of his owne good',
 And hav' a thank, and yet a *coot*' and hood. 612
 In youth' he lerned hadd' a good *mesteer*;
 He was a weel good wright, a *carpenteer*.
 This reve sat upon a ful good stot',
 That was a *pomely* grey, and highte Scot. 616
 A long *surcoot*' of *pers* upon he hadd',
 And by his syd' he baar a rusty blaad.
 Of Northfolk was this reev' of which I telle,
 Bysyd' a toun men callen Baldeswelle. 620
 Tucked he was, as is a *freer*', aboute,
 And e'er he rood the hind'rest of the *route*.

29. THE SOMNOUR.

- A *Somnour* was ther with us in that *place*,
 That hadd' a fyr-reed cherubynes *face*, 624
 For *saucestem* he was, with eyghen narwe.
 iii As hoot he was, and *leccherous*, as a sparwe,
 With skalled browes blak', and pyled berd;
 Of his *vysage* children wer' aferd. 628
 Ther n'as quiksilver, *lytarg*', or brimstoon,
 iii *Boras*, *ceruce*, ne *oyl* of *tarter* noon,
 Ne *oynement* that wolde clens' and byte,
 That him might helpen of his whelkes whyte, 632
 Nor of the knobbes sitting' on his chekes.
 Weel lov'd' he garleek, *oynouns*, and eek lekes,

597 *deyerye*, the termination seems borrowed from the French, for *dey* see Wedgwood's Etym. Dict. 1, 424.

598 *stoor*, I am inclined to consider this a form of *steer*, ags. *steor*, rather than *store*, as it is usually interpreted, as the swine, horse, steer, and poultry go better together. On the interchange of (ee) and (oo) see *suprà* p. 476.

612 so He. Ca. Co. P.; and an hoo de L., a thank, a cote, and eek an hood Ha., a thank, yet a gowne and hood E.

 His swiin, -is hors, -is stoor, and his pultri'e,
 Was hool'li in dhis reev'es guv'erniq',
 And bi -is kuv'enaunt jaaf dhe rek'niq', 600
 Sin dhat -is lord was twen'tii jeer of aadzh'e;
 Dher kuud'e noo man briq -im in ar'ee'raa'dzhe.
 Dher n- -as bal'ii', nee heerd, nee udh'er hii'n'e,
 Dhat dhai ne kneu -is slaiht and his kov'in'e; 604
 Dhai weer adraad' of him, as of dhe deeth'e.
 His wuun'iq was ful fair upon an heeth'e,
 With green'e treez ishadowed was -is plaas'e.
 He kuud'e bet'er dhan -is lord pur'tshaas'e. 608
 Ful ritsh -e was astoorded priv'eli;
 His lord weel kuuth -e pleez'e sub'til'li;
 To jeev and leen -im of -is ooun'e good,
 And naav a thaqk, and yet a koot and hood. 612
 In juuth -e lern'ed had a good mes'teer';
 He was a weel good wwikht, a karpenteer'.
 Dhis reeve sat upon a ful good stot,
 Dhat was a pum'eli; grai, and rikht'e Skot. 616
 A loq syrkoot' of pers upon -e had,
 And bi -is siid -e baar a rust'ii blaad.
 Of North folk was dhis reev of whitsh i tel'e,
 Bisid' a tuun men kal'en Bal'deswel'e. 620
 Tuk'ed -e was, as is a freer, abut'e,
 And eer -e rood dhe hind'rest of dhe ruut'e.

29. Dhe Sum'nuur.

A Sum'nuur was dher with us in dhat plaas'e,
 Dhat had a fiir-reed tsheerubiin'es faas'e, 624
 For sawseflem -e was, with aikh'en nar'we.
 As hoot -e was and letsh'eruus, as a spar'we,
 With skal'ed broou'es blaak, and pil'ed berd;
 Of his viisaa'dzhe tshil'dren weer aferd'. 628
 Dher n- -as kwik'sil'ver, liitardzh', or brim'stoon';
 Boraas', seryys'e, ne uil of tart'er noon,
 Ne uin'ement dhat wold'e klenz and biit'e,
 Dhat him mikht help'en of -is wheelkes whiit'e, 632
 Nor of dhe knob'es sit'iq on -is tsheek'es.
 Weel luvd -e gar'leek', un'juunz', and eek leek'es,

 which would introduce a very inhar-
 monious trissyllabic measure.

634 oynons Ha. E. He. Co.,
 onyons L., onyounnys Ca.,
 oynyouns P. The pronunciation
 (un'juunz) is, of course, quite con-
 jectural, and moulded on the modern
 sound, though the more common
 oynons might lead to (uin'unz),
 which seems hardly probable. Com-
 pare the modern vulgar (iq'nz) and
 note on v. 465.

- And for to drinke strong wyn reed as blood.
 Than wold' he spek' and *cry'* as he wer' wood. 636
 And whan that he weel dronken hadd' the wyn,
 Than wold' he speke no word but Latyn.
 A fewe *termes* hadd' he, two or thre,
 That he hadd' lerned out of som *decre* ; 640
 No wonder is, he herd' it all the day ;
 And eek ye knowe weel, how that a *jay*
 Can clepe Wat, as weel as can the pope.
 But whoso coud' in other thing' him grope, 644
 Than hadd' he spent al his *philosophye*,
 Ay, *QUESTIO QUID JURIS?* wold' he *crye*.
 He was a *gentel harlot*, and a kinde ;
 iii A bett're felawe schulde men not finde. 648
 He wolde *suffer* for a *quart* of wyne
 iii A good felawe to haan his *concubyne*
 A twelvmoon'th, and *excus'* him atte fulle.

 As greet as it wer' for an alestake ;
 A *boucleer* hadd' he maad him of a cake. 668

30. THE PARDONEER.

- With him ther rood a *gentel Pardoneer*
 Of *Rouncival*, his freend and his *compeer*,
 That *streyt* was comen from the *court* of Rome.
 Ful loud' he sang, Com hider, love, to me ! 672

Com ba me! was probably the name of a song, like that in v. 672, or the modern "Kiss me quick, and go, my love." It is also probable that Absolon's speech contained allusions to it, and that it was very well known at the time.

677 ounces, so all six MSS., unces Ha., which probably meant the same thing, *suprà* p. 304, and not inches.

679 colpoun's, I have adopted a systematic spelling, culpons Ha. P., colpons E. He., culpones

L., culpounys Ca., colpouns ? Co., modern French *coupons*.

687 bre'r-d'ful, the MSS. have all an unintelligible *bret ful* or *bretful*, probably a corruption by the scribes of Orrmin's *bre'r-d'ful* = *brimful*; *breird*, *breird* are found in Scotch, see Jamieson.

697 So all the MSS. Either *saynt* is a dissyllable, see note to v. 120, or the line has a defective first measure, to which the extremely unaccented nature of that is opposed.

- + Weel coud' he reed' a *lessoun* or a *storie*,

as euerich a word E., apparently to avoid a defective first measure.

738 another. I have throughout pronounced *other* as (udh'er), because of the alternative orthography *outher*, *suprà* p. 267. This rhyme, however, shews that there must have also been a sound (oodh'er), which is historically

more correct. Orrmin writes *oþerr* for the adjective, and both *oþerr* and *oþþr* for the conjunction. That distinction has been carried out in the pronunciation of the Proclamation of Henry III., *suprà* pp. 501-3-5.

744 not set folk, so all the six MSS., folk nat set Ha.

THE HOOSTE AND HIS MERTH.

- Greet *chere* maad' our' *hoost*' us ev'rychoon,
 And to the *soupeer* sett' he us anoon; 748
 And *served* us with *vytayl'* atte beste.
 Strong was the wyn, and weel to drink' us leste.
 A seem'ly man our' *hooste* was withalle
 For to haan been a *marschal* in an halle; 752
 A *large* man was he with eyghen stepe,
 A fair're *burgeys* is ther noon in Chepe :
 Bould of his spech', and wys, and weel ytaught,
 And of manhode lacked' him right nawght. 756
- iii Eek theerto he was right a merye man,
 And after *soupeer* pleyen he bigan,
 And spaak of merth' amonges other thinges,
 Whan that we hadde maad our' rekeninges; 760
 And seyde thus : Lo, lording's, trewely,
 Ye been to me weelcomen hertely,
 For by my trouth', if that I schul not lye,

 And *grawnted* him withoute mor' *avys*,
 And bad him sey' his verdyt', as him leste.
 Lording's, quoth he, nou herk'neth for the beste, 788

756 lacked' him, this is conjectural; lakkede he Ha., him lakkede the six MSS. variously spelled, in which case the final *e* must be pronounced, which is so unusual that I have preferred adopting the order of Ha. and the construction of the other MSS.

759 amonges E. He. Co.
 764 I ne sawgh not, this is a composite reading: I ne saugh Ha., I sawgh not the other MSS. variously spelled. The Ha. has therefore a trissyllabic first measure, which is unusual and doubtful; to write both *ne* and *not* introduces an Alexandrine.

Dhe Oost and his Merth.

Greet tsheer'e maad uur Oost us ev'riitshoon',

 And bad -im sai -is ver'diit as -im leste.
 Lord'iqz, kwoth nce, nuu herk'neth for dhe best'e, 788

We might read the Ha. I ne sawgh this yeer, as an Alexandrine with a defective first measure. Perhaps I is a mistake, and ne sawgh this yeer, or this yeer sawgh not, may be correct, but there is no authority for it. Tyrwhitt reads: I saw not

this yeer swiche a compaignie, which is probably conjectural. See p. 649.

795 whylom E. He. Co. P. L., and so Tyrwhitt, Sloane MS. 1685, omits the word; of adventures that ther han bifalle Ha, which would refer only to the second stories and imply that they should relate to adventures at Canterbury,

which is unlikely, as they must have all known them; whylom is suitable for both sets of tales, and a word of that kind is wanted. The Sloane MS. 1685 also spells *aventoures*, see p. 635, note 1. The passage is wanting in Ca.

In correcting the proofs of this text and conjectured pronunciation of Chaucer's Prologue I have had the great advantage of Mr. Henry Nicol's assistance, and to his accuracy of eye and judgment is due a much greater amount of correctness and consistency than could have been expected in so difficult a proof.¹ Owing to suggestions made by Mr. Nicol, I have reconsidered several indications of French origin. One of the most remarkable is Powles v. 509,

¹ Some trifling errors escaped observation till the sheets had been printed off, which the reader will have no difficulty in correcting, such as e, o, i for ee, oo, y, etc. The following are more important. Read in Text, v. 15 *spccially*, v. 69 *poort'*, v. 123 *entuned*, v. 152 *streyt*, v. 208 *Frere*, v. 260 *pore*, v. 289 *soberly*, v. 365 *fresch*, v. 569 *vylayle*, v. 570 *tayle*, v. 599 *governing*, v. 601 *age*. Read in the Pronunciation, v. 14 *sundrii*, v. 23 *kum*, v. 35 *whiizl*, v. 48 *fer're*, v. 53

Abu'ven, v. 66 *Avain*, v. 71 *al*, v. 72 *dzhen't'l*, v. 107 *fedh'res*, v. 144 *sak'oh*, v. 181, *Dhis*, v. 210 *kan*, v. 241 *ev'riitsh*, v. 265 *his tuqe*, v. 284 *men*, v. 292 *world'lii*, v. 334 *bi' dhe morw-*, v. 414 *grund'ed*, v. 424 *jaaf*. Read in the Footnotes, on v. 60, l. 3 *nob'l*, on v. 120, l. 1 *saynt*, on v. 120, last line but three, "all the six MSS. except L.", and add at the end of the note "and L. omits also," on v. 247, l. 1 *n o o n*, on v. 305, l. 1 *He*, on v. 512, l. 1, *foolde*.

which seemed to have a French pronunciation, but which ought perhaps to be marked Pow'les, the form Powel appearing in v. 13938, *suprà* p. 266, a direct derivative from Orrmin's Pawell with a long *a*. The alterations thus admitted affect the calculation on p. 651, which was made from the MS. As now printed (making the corrections just mentioned), the numbers are as follows:—

Lines containing no French word . .	286,	per cent.	33·3
" only one " " . .	359,	"	41·7
" two French words . .	179,	"	20·9
" three " " . .	29,	"	3·5
" four " " . .	4,	"	0·5
" five " " . .	1,	"	0·1
Lines in Prologue . .	858		100·0

These numbers are not sensibly different from the former. The number of Trissyllabic measures after correction appears as 76, the numbers in the six classes on p. 648 being respectively 25, 6, 3, 4, 29, 9. The number of lines with defective first measures, p. 649, remains 13, as before. The number of lines with two superfluous syllables, p. 649, is now 8, vv. 709, 710, having been added.

§ 2. *Gower.*

Johan Gower, died, a very old man, between 15 August and 24 October 1408, having been blind since 1400, the year of Chaucer's death. His three principal works are *Speculum Meditantis*, written in French, which is entirely lost; *Vox Clamantis*, in Latin, still preserved; and *Confessio Amantis*, in English, of which there are several fine MSS., and which was printed by Caxton in 1483. In this edition Caxton calls him: "Johan Gower squyer borne in Walys in the tyme of kyng richard the second." The district of Gowerland in S. W. Glamorganshire, between Swansea bay and Burry river, a peninsula, with broken limestone coast, full of caves, and deriving its name from the Welsh *gŵyr* = (guu'yr) oblique, crooked, traditionally claims to be his birth place. Now Gower's own pronunciation of his name results from two couplets, in which it is made to rhyme with *power* and *reposer*. The first passage, according to the MS. of the Society of Antiquaries, is

Sche axeþ me what was my name
Madame I feyde Johan Gower.
Now Johan quod sche in my power,
Thou muste as of þi loue fonde. iii 353¹

The other will be found below, pp. 738-9. The sound was therefore (Guu'eer'), which favours the Welsh theory. The modern form of the name is therefore (Geu'er), and Gowerland is now called (Gæw'eländ) in English.

But the correctness of this Welsh derivation has been disputed. Leland had heard that he was of the family of the Gowers of Stitenham in Yorkshire, ancestors of the present Duke of Sutherland. The Duke has politely informed me that the family and traditional pronunciation of his patronymic *Gower* is a dissyllable rhyming to *mower*, *grower*, that is (Goo'er). Now this sound could not be the descendant of (Guu'eer'), and hence this pronunciation is a presumption against the connection of the two families, strengthening the argument derived from the difference of the coats of arms.²

He was certainly at one time in friendly relations with Chaucer, who, in his *Troilus* and *Cryseyde*, writes:—

O moral Gower, this boke I directe
To the, and to the philosophical Strode,
To vouchensauf, ther nede is, to correcte,
Of youre benignites and zeles goode. 5-77

And Gower, in some manuscripts, makes Venus send a message to Chaucer, as her disciple and poet, which is printed as an example below, pp. 738-9.

The text of Gower has not yet been printed from the manuscripts,

¹ These references throughout are to Pauli's edition, as explained *suprà*, p. 256.

² For other particulars of the life of Gower, derived from legal papers, shewing that he was possessed of land in Kent, see the life prefixed to Pauli's

edition of the *Confessio Amantis*, and Sir Harris Nicolas's Notice of Gower, in the *Retrospective Review*, N. S., vol. ii. No weight is to be attributed to his calling himself *English*, when asking to be excused for faults in French, in a French poem. He would have no

or from any one MS. in particular. Pauli's edition is founded on Berthelette's first edition, 1532, "carefully collated throughout" with the Harl. MSS. 7184 and 3869. Of the first Pauli says: "This volume, on account of its antiquity and its judicious and consistent orthography, has been adopted as the basis for the spelling in this new edition." Pauli says that he has also used Harl. MS. 3490, and the Stafford MS. where it was important, and that his "chief labour consisted in restoring the orthography and in regulating the metre, both of which had been disturbed in innumerable places by Berthelette." As the result is eminently unsatisfactory, it has been thought best, in giving a specimen of Gower, to print the original in precise accordance with some MSS.

The following MSS. of Gower's *Confessio Amantis* are described by Pauli. At Oxford, having the verses to Richard II, and those on Chaucer: MS. Laud. 609, Bodl. 693, Selden, B. 11, Corp. Chr. Coll. 67;—without these verses: MS. Fairfax 3, Hatton 51, Wadham Coll. 13, New Coll. 266;—with the first and without the second, MS. Bodl. 294;—dedicated to Henry of Lancaster, and with verses on Chaucer; MS. New Coll. 326. In the British Museum, Harl. 7184, 3869, 3490. MS. Stafford, in the possession of the Duke of Sutherland. Pauli does not mention the MS. 134, of the Society of Antiquaries.

The MSS. most accessible to me were the four cited *suprà* p. 253. Of these the orthography of Harl. 3869 appeared to me the best, and I have therefore printed it in the first column. In the second column I have given the text of Harl. 7184, which Pauli professes to follow; and in the third the text of the MS. of the Society of Antiquaries, No. 134.¹ The fourth column contains the conjectural pronunciation. By this means the diversities of the orthography and the uniformity of the text will be made evident. It is the former in which we are most interested. The passage selected for this purpose is the story of Nebuchadnezzar's punishment, as being unobjectionable in detail, and sufficient in length to give a complete conception of the author's style.

But as the Message from Venus to Chaucer possesses great interest from its subject, I have added a copy of it according to Harl. MS. 3869, from which Pauli states that he has taken the copy printed in his edition. In the second column I have annexed the same text according to the MS. of the Society of Antiquaries, and, since the passage does not occur in the other two MSS., in the third column I have added my own systematic orthography, and in the fourth column the conjectured pronunciation. For these two last columns a composite text has been chosen, founded on a comparison of the two MSS.

In all cases the phonetic transcript has been constructed on the same principles as that of Chaucer in the preceding section.

doubt considered himself an Englishman, as he spoke English and was an English subject and landowner, even if he had been born in Wales.

¹ As this MS. makes no distinction

between z ʒ, but writes the guttural with the same z that it uses in Nabugodonozor, I have used z throughout its transcription.

§ 3. *Wycliffe.*

John Wycliffe born 1324, died 1384, is supposed to have commenced his version of the Scriptures in 1380, just as Chaucer was working at his Canterbury Tales. We are not sure how much of the versions which pass under his name, and which have been recently elaborately edited,¹ are due to him, but the older form of the versions certainly represents the prose of the XIVth century, as spoken and understood by the people, on whose behoof the version was undertaken. Hence the present series of illustrations would not be complete without a short specimen of this venerable translation. The parable of the Prodigal Son is selected for comparison with the Anglosaxon, Icelandic, and Gothic versions already given (pp. 534, 550, 561), and the Authorized Version, with modern English pronunciation, inserted in Chap. XI., § 3.

The system of pronunciation here adopted is precisely the same as for Chaucer and Gower, and the termination of the imperfect of weak verbs, here *-ide*, has been reduced to (*id*), in accordance with the conclusions arrived at on p. 646-7.

CHAPTER VIII.

ILLUSTRATIONS OF THE PRONUNCIATION OF ENGLISH DURING
THE SIXTEENTH CENTURY.

§ 1.

William Salesbury's Account of Welsh Pronunciation, 1567.

THE account which Salesbury furnished of the pronunciation of English in his time being the earliest which has been found, and, on account of the language in which it is written, almost unknown, the Philological and Early English Text Societies decided that it should be printed in extenso, in the original Welsh with a translation. This decision has been carried out in the next section, where Salesbury's treatise appropriately forms the first illustration of the pronunciation of that period. But as it explains English sounds by means of Welsh letters, a previous acquaintance with the Welsh pronunciation of that period is necessary. Fortunately, the appearance of Salesbury's dictionary created a demand to know the pronunciation of Welsh during the author's lifetime, and we possess his own explanation, written twenty years later. The book containing it is so rare, that it is advisable to print it nearly in extenso, omitting only such parts as have no phonetic interest. Explanatory footnotes have been added, and the meaning of the introduced Welsh words when not given by Salesbury, has been annexed in Latin, for which I am chiefly indebted to Dr. Benjamin Davies of the Philological Society. It has not been considered necessary to add the pronunciation of the Welsh words as that is fully explained in the treatise, and the Welsh spelling is entirely phonetic. A list of all the English and Latin words, the pronunciation of which is indicated in this tract, will form part of the general index to Salesbury given at the end of the next section.

There are two copies of this tract in the British Museum, one in the general and the other in the Grenville library. The book is generally in black letter (here printed in Roman type,) with certain words and letters in Roman letters (here printed in italics). The Preface is Roman, the Introductory letter italic. It is a small quarto, the size of the printed matter, without the head line, being $5\frac{3}{4}$ by $3\frac{1}{2}$ inches, and including the margin of the cut copy in the general library, the pages measure $7\frac{1}{2}$ by $5\frac{1}{2}$ inches. It contains $6\frac{3}{4}$ sheets, being 27 leaves or 54 pages, which are unpagged and

unfolioed. In this transcript, however, the pages of the original are supposed to have been numbered, and the commencement of each page is duly marked by a bracketed number. The title is lengthy and variously displayed, but is here printed uniformly. In the Roman type (here the italic type) portion, VV, vv, are invariably used for W, w, and as there is curious reference to this under the letter W, this peculiarity has been retained in the following transcript. Long f is not preserved except in the title.

[1] A playne and a familiar Introductiō, teaching how to pronounce the letters in the Brytishe tongue, now commonly called Welshe, whereby an Englysh man shall not onely wyth ease reade the sayde tonge rightly: but marking the same wel, it shal be a meane for hym wyth one labour to attayne to the true pronounciation of other expedient and most excellent languages. Set forth by VV. Salesbury, 1550. And now 1567, pervfed and augmēted by the same.

This Treatise is most requisite for any man, yea though he can indifferently well reade the tongue, who wyl be thorowly acquainted with anie piece of tranlation, wherein the sayd Salesbury hath dealed. (*)

[4] . . . Some exclaied . . . that I had peruerterd the whole Orthographie of the [English] tounge. Wher in deede it is not so: but true it is that I altered it very litle, and that in very few wordes, as shall manifestlye appeare hereafter in the latter end of this booke. No, I altered it in no mo wordes, but in suche as I coulde not fynde in my hart to lende my hand, or abuse my penne to wryte them, otherwyse than I haue done. For who in the time of most barbarousnes, and greatest corruption, dyd euer wryte euery worde as he souēded it: As for example, they than wrate, *Ego dico tibi*, and yet read the same, *Egu deicu teibei*, they wrate, *Agnus Dei qui tollis*, but pronounced *Angnus Dee-i quei touillys*.¹ And to come to [5] the English tung. What yong Scoler did euer write *Byr Lady*, for *by our Lady*? or *nunkle* for *vnkle*? or *mychgoditio* for *much good do it you*? or *sein* for *signe*?²

¹ These Latin mispronunciations were therefore (eg-u dei-ku tei-bei, Ag-nus Dee-i kwei touul-is). Probably (Dee-i) should be (Dee-ei), but it is not so marked. The phonetisation is not entirely Welsh. The pronunciation (touul-is) was in accordance with the

general sound of long o before i, see *supra* p. 194.

² The English examples were probably pronounced (bei'r laa'di, nuqk'l, mitsh-gud-it-ju, sein). It seems scarcely probable that an (o) should have been used in a familiar pronunciation of

And thus for my good wil molested of such wranglers, shal I condescend to confirme their vnskyful custome Or shall I proue what playne Dame Truth, appearing in hir owne lykenes can woorke against the wrynckled face neme¹ Custome? [8] Wyllyam Salesbury to the Reader.

[These two pages set forth that after the publication of his dictionary persons wanting to know Welsh asked him whether his dictionary would serve their purpose, and] [9] . . . amongst other communication had, they asked, whither the pronounciation of the Letters in Welsh, dyd dyffer from the Englysh sounding of them: And I sayde very muche. And so they perceiuing that they could not profite in building any further on the Welsh, lackyng the foundation and ground worke (whyche was the Welsh pronounciation of the letters) desired me eftsoones to write vnto them (as they had herd I had done in Welsh to my Country men, to introduce them to pronounce the letters Englysh lyke) a fewe English rules of the naturall power of the letters in our tounge.

And so than, in as much as I was not onelye induced wyth the premises, but also further perswaded, that neither any inconuenience or mischiefe might ensue or grow thereof, but rather the encrease of mutual amitie and brotherly loue, and continuall friendship (as it ought to be) and some commodity at the least wyle, to suche as be desirous to be occupied there aboutes. As for all other, euen as it shall neuer woorke them pleasure, so shall it no displeasure.

Euen therefore at the last, I haue bene so bolde as to enterprise (condescending to such mens honest request) to inuent and wryte these playne, simple, and rude rudimentes of the Welsh pronounciation of the letters, most humbly desiring the Readers to accept them with no lesse benouolent humanitie, then I hartily pretended towarde them, when I went about to treate of the matter.

¹ Here the modern Welsh alphabet introduces *ng* = (q).

² Not used in Modern Welsh.

³ Here *ph* (f) is introduced in modern Welsh but only for proper names, and as a mutation of *p*.

⁴ Salesbury's explanations give the following values to these letters,—A aa a, B b, C k, CH kh, D d, DD dh, E ee e, F v, FF f, G g, NG q, H h, I ii i, K k, L l, LL lh, M m, N n, O oo o, P p, PH f, R r, S s, T t, TH th, V v, U u, W u, Y y. The pronunciation of the Welsh U and Y will be specially considered hereafter.

⁵ This is of course merely fanciful.

⁶ The vowel *o* is also mutable: "Compare the German *Umlaut*, thus *bardd* [sacerdos], pl. *beirdd*; *corn* [cornu], pl. *cyrn*; *dwrn* [pugnus], pl. *dyrnau*.—B.D."

⁷ This is by no means a complete list of modern Welsh diphthongs, and no notice has been taken of the numerous Welsh triphthongs. The Welsh profess to pronounce their diphthongs with each vowel distinctly, but there is much difficulty in separating the sounds of *ae ai au ay* from (ai), and *iw* from *uw* (iu, yu), *oe*, *oy* fall into (oi), and *ei* sounds to me as (æi). In *ia ie io* initial, Welshmen conceive that they pronounce (ja je jo), and similarly in *wi, wy* they believe they say (wi, wy). This is doubtful to me, because of the difficulty all Welshmen experience, at first, in saying *ye woo* (i uu), which they generally reduce to (i uu).

⁸ That is the Welsh pronounce Latin *a* as their own *a*. Wallis evidently heard the Welsh *a* as (ææ, æ), supra p. 66, l. 18. Compare p. 61, note.

the Frenchmen sounde it commyng before *m* or *n*, in theyr tounge,¹ nor so fully in the mouth as the Germaines sound it in this woord wagen:² Neyther yet as it is pronounced in English, whan it commeth before *ge*, *ll*, *sh*, *tch*. For in these wordes and such other in Englyshe, domage, heritage, language, ashe, lashe, watch, calme, call, *a* is thought to decline toward the sound of these diphthonges *ai*, *au*, and the wordes to be read in thys wyse, domaige, heritaige, languaige, aische, waitche, caul, caulme.³ But as I sayd before *a* in Welsh hath alwayes but one sound, what so euer letter it folow or go before, as in these wordes ap, cap, whych haue the same pronounciation and signification in both the tongues.⁴

[13] Much lesse hath *a*, such varietie in Welshe, as hath *Aleph* in Hebrue (which alone the poynts altered) hath the sound of euerye vowel.⁵ Howbeit that composition, and deriuation, do oft tymes in the common Welsh speache chaunge *a* into *e*, as in these wordes, *enrveith* [semel] *seithfed* [septimus]. So they of olde tyme turned *a* into *e* or *ai* in making their plural number of some wordes reseruing the same letter in the termination, and the woord not made one sillable longer, as *apostol* [apostolus], *epestyl* [apostoli]: *caeth* [servus], *caith* [servi]: *dant* [dens], *daint* [dentes], *map* [filius], *maip* [filii]; *sant* [sanctus], *saint* [sancti]: *tat* [pater], *taith* [patres], etc., where in our tyme they extend them thus, *apostolion*, or *apostolieith*, *caethion*: *dannedd* or *dannedde*: *maibion*, *santie* or *seinie*: *taidie* or *tadeu*. But now in Northwales *daint* & *taid* are become of the singuler number, *taid* [avus] being also altered in signification Neuertheles *e* then succeedeth, & is also wrytten in the steede of *a*: so that the Reader shall neuer be troubled therewith.

¶ *The sound of B.*

B in Welsh is vniuersally read and pronouced as it is in Englyshe. Albeit whan a woorde begynneth wyth *b*, and is ioyned wyth moe woordes commyng in a reason, the phrase and maner of the Welshe speach (muche like after the Hebrue idiome) shal alter the sound of that *b*, into the sound of the Hebrue letter that they call *Beth* not daggedged, or the Greek *Veta*,⁶ either els of *v* being consonant in Latine or English: as thus where as *b*, in thys

¹ Suprà p. 143, l. 1, and p. 190.

² Meant to be sounded as (*vaag'en*, *vaahg'en*, *vaag'en*)? The ordinary pronounciation of modern Saxony sounds to me (*bhaagh'en*).

³ Probably (*dum'aidzh*, *her'taidzh*, *laq'waidzh*, *aish*, *waitsh*, *kaul*, *kaulm*). For the change to *ai* see pp. 120, 190; for that to *au* see pp. 143, 194.

⁴ Probably *ap* means *ape*; it does not occur in Salesbury's own dictionary, but he has "*ab ne siak ab* An ape," and "*kap a cappe*." The word *siak* is meant for (*shak*), and (*shak*) for (*dzhak*).

The Welsh now sometimes pronounce *si* as (*sh*), as *ceisio* *petere* (*kai'sho*), and they use it to represent English (*sh*, *tsh*; *zh*, *dzh*), which sounds are wanting in their language. Hence the passage means (*ab ne dzhak-ab*), an ape or a Jack-ape, as I learn from Dr. Davies.

⁵ As *aleph* is only (*t*) or (*g*); in pointed Hebrew, (p. 10), it has no relation to any vowel in particular.

⁶ The Greek *β*, is called (*vii'ta*) in modern Greek (pp. 518, 524). Salesbury seems to have pronounced (*vee'ta*).

So doe these welsh words *cuvit, curicul, viceses*, which be deriued of *cubitus, cubiculum, bisextus*.

Walshe [14] word *bys* a fynger, is the primitiue (or if I should borow the Hebrue terme) the radical letter, which comming in the context of a reason, shall not than be calle d *b*, but *v*, as in thys text: *ei vvs* his finger. And sometyme *b* shall be turned into *m*, as for an example: *vymys* my fynger: *dengmlvvydd* for *decblvvydd*, ten yeare old. And yet for all the alteration of thys letter *b*, and of diuers other (as ye shall perceyue hereafter) whych by their nature be chaungeable one for an other, it shall nothyng let nor hynder anye man, from the true and proper readyng of the letters so altered.

For as soone as the ydiome or proprietie of the tungue receyueth one lettter for an other, the radical is omitted and left away: and the accessorie or the letter that commeth in steede of the radical, is forthwith written, and so pronounced after his own nature and power, as it is playne inough by the former example. Whych rule, wrytyng to the learned and perfectly skylled in the idiome of the tongue, I do not alwayes obserue, but not vnblamed of some, but how iustly, let other some iudge.

Provided alwayes that such transmutation of letters in speakyng (for therein consisteth all the difficultie) is most diligently to be marked, obserued, and taken hede vnto, of him that shall delite to speake Welsh a right.¹

¶ *How C. is pronounced.*

C maketh *k*, for look what power hath *c* in Englishe or in Latine, when it commeth before *a, o, u*, that same shall it haue in Welshe [15] before any vowell, diphthong, or consonant, whatsoever it be. And as *M. Melanchthon* affirmeth, that *c. k. q.* had one sound in times past wyth the Latines: so do al such deducted wordes thereof into the Welsh, beare witnes, as, accen of *accentu*, Caisar *Cesare*, cicut of *cicuta*, cist of *cista*, croc of *cruce*, raddic of *radice*, Luc of *Luca*, lluc also of *luce*, Lluci of *Lucia*, llucern of *lucerna*, Mauric of *Mauricio*: natalic of *natalicis*.

How be it some of our tyme doe vse to wryte *k*. rather than *c*. where Wryters in tymes past haue left *c*. wrytten in their auncient bookes, specially before *a, o, u*, and before all maner consonantes, and in the latter end of wordes. Also other some there be that

¹ The initial permutations in the Welsh (and Celtic languages generally) are a great peculiarity. Some consonants have three, some two, and some only one mutation, and the occasions on which they have to be used do not seem capable of being reduced to a general principle. The mutations in Welsh are as follows:—

radical	p	t	c	b	d	g	ll	rh	m
vocal	b	d	g	f	dd	-	l	r	f
nasal	mh	nh	ngh	m	n	ng			
aspirate	ph	th	ch						

The (-) indicates the entire loss of *g* as *gafr* goat, *dy afr* thy goat; *mh nh ngh* are not (*mh, nh, gh*), but (*mnh nnh*) and consequently if there is no preceding vowel which can be run on to the (*m, n, q*), a murmur is inserted as (*'mnh, 'nnh, 'qnh*).

sound now *c*, as *g*, in the last termination of a word: Example, *oc* [juventus], *coc* [moles], *lloc* [agger]: whych be most commonly read, *og*, *cog*, *llog*.¹

Furthermore, it is the nature of *c*. to be turned into *ch*, and other whyles into *g*. But I meane thys, when a word that begynneth wyth *c*. commeth in construction as thus: *Carvv* a Hart, *Evvio a' Charvv*, a Hynde and a Hart. Either els when *c*. or *k*. (for they be both one in effect) is the fyrst letter of a word that shall be compounded, as for an example, *Angraff*, *angred*, *angrist*, which be compounded of *an* and of *craff*, *cred*, *Christ*.²

Constructiō is taken here for the ioyning together of wordes otherwise called a reason. Carw is the absolut word.

¶ The sound of Ch.

CH doth wholly agree with the pronounciatiō of *ch* also in the *Orgayne*³ or **Scottyshe*⁴ toungue, of the Greeke *Chy*,⁵ or the Hebrue [16] *Cheth*,⁶ or of *gh* in English.⁷ And it hath no affinitie at all wyth *ch* in Englysh, except in these wordes, *Mychael*, *Mychaelmas*,⁸ and a fewe such other. *ch* also when it is the radical letter in any Welsh woorde, remayneth immutable in euery place. But note that their tongue of Southwales giueth them to sound in some wordes *h* onely for *ch*,⁹ as *hvvech*, for *chvvech* [sex], *hvvaer* for *chvvaer* [soror]. Further *ch* sometyme sheweth the feminine gender, as well in Verbes as in Nownes, as *ny thal hon y chodi* [non digna illa quæ levetur]: *y char hi* [amator illius mulieris]: for if the meanyng were of any other gender, it shuld haue been sayd *i godi* and not *i chodi*, *i gar*, and not *i char*. &c.

Namely as the Scottishe Scriueners obserue, as richt, mycht, &c.

¶ The sound of D.

D is read in Welshe none otherwyse then in Englyshe, sauynge onelye that oftentymes *d* in the fyrst syllables shalbe turned into *dd*, resembling much *Daleth* the Hebrue *d*.¹⁰ And sometyme

¹ Mr. E. Jones observes that "this is in accordance with a general tendency in modern Welsh to use the medial for the tenuis." Dr. Davies doubts this tendency.

² The modern Welsh forms are *annghraff* hebes, *annghred* infidelitas, *annghrist* anti-Christus.

³ Where it has really three sounds (*kh*, *kh*, *kwh*) dependent on the preceding vowel (p. 53). Probably Salesbury only thought of (*kh*).

⁴ The Scotch words cited in the margin, are pronounced (*rekht mekht*).

⁵ The modern Greek *χ*, according to one account I received, is always (*kh*), never (*kh*), but Prof. Valetta (p. 517, n. 2) used both (*kh*, *kh*).

⁶ The Hebrew *ד* and *דא* are by Euro-

peans confounded as (*kh*); taking the Arabic pronunciation of the corresponding *ح* *ح* they are (*h*, *krh*).

⁷ This therefore confirms the existence of a sufficiently distinct (*kh*) in English, which may have been occasionally (*kh*).

⁸ It is not to be supposed that *ch* in these words was (*kh*) at that time. But the text certainly implies that the *ch* was not (*tsh*), and was therefore probably (*k*) as at present. All that is meant, then, probably, is that (*kh*) is more like (*k*) than (*tsh*).

⁹ The modern use in South Wales is to say (*wh*) initially for (*kwh*), as (*whekh*) for (*kwhekh*).

¹⁰ Hebrew *ד* *דא* = (*d*, *dh*).

when a word begynnyng wyth *d*, is compounded wyth *an*: the *d* shall slyp away, as *anavyn* [in-donum] of *an* [in] and *davyn* [donum]; *anoeth* [in-doctus] of *an* [in] and *doeth* [doctus].

Dd is nothing lyke of pronounciation to *dd* in Englysh or Latine. For the double *dd* in Welsh hath the very same sound of *dhelta*¹ or *dhaletth*, dashed wyth *raphe*,² or of *d* betwyxt .ij. vowels in the Hispanish tongue,³ eyther els of *th*, as they be comonly sounded in these Englysh wordes, the, that, thys, thyne.⁴ Neither do I meane nothyng lesse then that *dd* in Welshe is sounded at any tyme [17] after the sound of *th* these wordes of Englishe, wyth thynne, thanke.⁵ But ye shall fynde in olde wrytten Englysh bookes, a letter hauing the figure of a Romayne *y*, that your auncesters called *dhorn*, which was of one efficacie wyth the Welsh *dd*.⁶ And this letter *y*⁷ I speake of, may you see in the booke of the Sermon in the Englyshe Saxons tonge, which the most reuerend father in God D. M. P. Archbishop of *Canturbury* hath lately set forth in prynt.⁸ And ther be now in some countries in England, that pronounce *dd* euen

in these wordes **addes*, *fedder*,⁹ according as they be pronouced in the Welsh. And ye must note that *dd*, in Welsh is not called double *dd*, neither

is it a double letter (though it seemeth so to be) wherefore it doth not fortify nor harden the sillable that it is in, but causeth it to be a great deale more thicke, soft, and smoothe. For he that first added to, the second *d*, ment thereby to aspirate the *d*,⁹ and signifie that it should be more lyghtly sounded, and not the contrary.

¹ Modern Greek *δ* is (dh). This, and the sound given above to *β* (p. 747 note 6), shews that the present modern Greek system of pronounciation (p. 523) was then prevalent in England, see pp. 529-530 and notes. Sir Thomas Smith's book, advocating the Erasmian system of pronouncing Greek, was not published till 1568, a year after this second edition of Salesbury's book.

² "Formerly, when *Dāgēsh* was not found in any of the פתח כפף letters, a mark called קֶפֶף *Rā-phē*, was placed above it, in order to shew that the point had not been omitted by mistake. With the ancient Syrians this was nothing more than a point made with red ink. The Hebrews probably wrote it in the same way: but, as this point might be mistaken for the vowel *Khōlēm*, when printed, or, for one of the accents, the form of it was altered for a short line thus (-), which is still found in the Hebrew manuscripts, though very rarely in printed books." *S. Lee*, Grammar of the Hebrew Language, 3rd edit. p. 21. Hence *ṭ* with *raphe* was equivalent to the ordinary *ṭ* = (dh).

³ If the Spanish *d* in this place is not true (dh), it is so like it that Spaniards hear English (dh) as that sound, and English that sound as (dh). Don Mariano Cubi i Soler, a good linguist, who spoke English remarkably well, in his *Nuevo Sistema . . . para aprender a leer i pronunciar . . . la lengua inglese*, Bath, 1851, gives (p. 8) the Spanish *deidad* deity, as a threefold example of (dh). Yet the Spanish sound may be (e), p. 4.

⁴ Pronounced (dhe, dhat, dhī, dhein).

⁵ Pronounced (with, thīn, thaqk).

⁶ This alludes to the common practice of printing *y* for *þ*, which letter is usually called (thorn) not (dhorn), but see p. 541, note 2.

⁷ As this was first written in 1550, the Archbishop must have been Cranmer.

⁸ *Addis addice*, now written *adze*, is generally called (ædz). *Fedder* is perhaps meant for *feather* (fedh:ā) but may be *father*, provincially (fee'dh:).

⁹ The Welsh has *dd*, *ff*, *ll* (dh, f, lhh), all meant as so-called aspirations of their *d*, *f*, *l* (d, v, l). Similarly Salesbury has *rr* for modern *rh* (infra

But I thynke it had be easier, more meete, and lesse straunge to the Reader, if that he had put *h*, after the former *d*, in a signe of asperation, than to adde an other *d* thereto.

And as it semeth it is not passing three or foure C. yeares ago, synce they began to double their *d*, for before that tyme by lykely-hood they vsed one constant maner of pronounciation of their letters euen as the Hebrues did at the beginning.

[18] *Dd* also begynning a word, sheweth that it commeth in construction: for there is no woord commying absolutely that his fyrst syllable begynneth wyth *dd*.

Moreouer, *dd* relateth the masculyne gender, as (*Ai ddeuvraich ar ei ddvvyron*) [illius hominis brachia duo super illius hominis pectora duo] for in an other gender, it would be sayd, *Ai ddeuvraich ar ei ddvvyron* [illius mulieris, &c. ut suprà].

How E ought to be sounded.

E without any exception hath one permanent pronounciation in Welsh,¹ and that is the self pronounciation of *Epsilon* in Greke,² or of *e* in Latine, being sounded aryght, or *e* in Englyshe, as it is sounded in these wordes, a *vvere*, *vvereke*, *broke*, *vveste*.³

And the learner must take good hede that he neuer do reade the said *e* as it is red in these English wordes, *vve*, *beleue*:⁴ For than by so doing shall he cyther alter the signification of the word wherin the same *e* is so corruptly reade, either els cause it to betoken nothing at all in that speche. Example: *pe* [si] signifieth in English and if, now, ye rede it *pi*, than wil it betoken this letter *p*, or the byrd that ye call in Englyshe a Pyc. And so *gve* is, a webbe: but if ye sound *e* as *i* reading it *gvi*, then hath it no signification in the Welshe.

And least peradventure the foresayd example of the Welch or straunge tong be somewhat obscure, [19] then take this in your own mother tong for an explanation of that other: wherby ye shall perceiue that the diuersitie of pronounciation of *e* in these English wordes subscribed hereafter, wyll also make them to haue diuers significatiōs, and they be these wordes, *bere*, *pere*, *hele*, *melo*.⁵

p. 758); and Dan Michel and others use *ss* for (sh), (suprà pp. 409, 441) which many consider as an aspirate of *s*. Of course there is no aspiration, though the writing (dh), as Salesbury goes on to suggest, has arisen from this old error. Compare the Icelandic *hj*, *hl*, *hn*, *hr*, *hv*, suprà p. 544.

¹ The modern Welsh *e* is, and seems to have always been (ee, e) and never (ee, e), and hence I so transcribe it.

² Meaning (e) of course.

³ (Weer, wreck *rweek*, breeke, wrest, *rwest*).

⁴ (Wii, billiv) as appears from what immediately follows.

⁵ (Biir) bier or beer, (beer) bear, (piir) peer, (peer) pear, (hiil) heel, (ueel)

heal, (miil) meel = meddle?, (meel) meal, p. 79. Mr. Murray suggests that *meal* in the sense of food consumed at one time, German *mahl*, ags. *mæl*, Scotch (*miel*) may have been (meel), and *meal* in the sense of flour, German *mehl*, ags. *melu*, Scotch (*mil*) may have been (miil) and that these were the two sounds Salisbury meant to distinguish. This is a priori most likely, but the orthographies leave the matter in great perplexity. Promptorium: meel of mete; mele or mete, *commestio cibatus*; meele of corne growndyn', *farina far*. Palsgrave: meale of corne *farine*, meale of meate *repast*. Levins: meale *farina*, by flock meale *minutim*, mcele *cæna*, which would seem to indi-

Neither yet doe we vse in Welsh at any time to write *e* in the middle or last sillables, & to leaue it vnspoken in reading: as it is done by *scheua* in Hebrue, or as the maner of wrytyng and read- yng of the same is accustomed in Englysh, as it shall be more manifest by these wordes that followe: *golde, sylke, purenes, Chepe- syde*: wherein (as I suppose) *e* is not written to the entent it might be read or spoken, but to mollifye the syllable that it is put in.¹

But now I am occasioned to declyne and stray somewhat from

my purpose, and to reueale my phantasie to yong wryters of Englishe, who (me thinketh) take ouer muche paynes, and bestowe vnrequisite cost (hauing no respect to the nature of the Englysh ending

e) in doublyng letters to harden the syllable, and immediatly they adde an *e*, whych is a signe of mittigatyng and softning of the syllable, after the letters so doubled, as thus: *manne, vvorshippe, Godde, vrotte, vryshe, goodnesse, hemme, uette*:² whych woordes wyth such other lyke, myght with lesse labour, and as well for the purpose, be wrytten on thys wyse: *maun, vvorshypp. Godd, vvott, vvysh, goodness, hemm, nett*: or rather thus: *man vvorshyp, God, vvott, goodnes, hem, net*.

[20] And though thys principle be most true *Frustra id fit per plura, quod fieri potest per pauciora*, that is done in vayne by the more, that maye be done by the lesse: yet the Printers in consideration for iustifying of the lynes, as it is sayde of the makers to make vp the ryme, must be borne wythall.³

How F. is commonly sounded.

F In Welsh being syngle, and *v* when it is consonant in Welsh, English, or Latine, be so nygh of sounde, that they vse moste commonly to wryte in Welsh indifferently the one for the other. And I my selfe haue heard Englysh men in some countries of England sound *f*, euen as we sound it in Welsh.⁴ For I haue marked their maner of pronounciation, and specialle in soundyng these woordes:

cate the difference (meel, miil) in an exactly opposite direction, but as Levins has: eale eel *anguilla*, beale beel *spe-lunca*, deale deele *portio*, he may have meant to imply that these words were in a transition state. The meaning of the two words (miil, meel) then, intended by Salesbury, must remain doubtful.

¹ The utter extinction of the feeling for the final *e* is here well shewn. How a syllable can be "mollified" without any utterance, is not apparent. The words are (goold, silk, pyrr-nes, Tsheep-seid-).

² (Man, wur'ship, God, wot, wish, gud-nes, hem, net), since *uette* must be a misprint for *nette*.

³ This may be partly an explanation of the varieties of orthography in the xvth century in printed books, but will not explain the nearly equal varieties in manuscript. I have noted at least ten ways of spelling *tongue* in in Salesbury's own book: *tongue, tonge, tong, toungue, tounge, tounge, tunge, tung, toug; ags. tunge*.

⁴ This is west country, still heard in Somersetshire and Devonshire. In early English books of the West of England *u* is constantly used for *f*. We also find it in Dan Michel's Kentish dialect 1340 (p. 409). The same places give also *z* for *s*.

voure, viue, disvigure, vish, vox: where they would say, *foure, fiue, disfigure, fysh, Fox, &c.*¹

But who soeuer knoweth the sounde of the letter called *Digamma* (whose figure is much lyke F, but ouerwhelmed Eolicum *g* vpsydedowne, as ye see here. ¶) he shall also know thereby the verye sounde of the syngle *f* in Welsh.² They of South-wales rather vse *v*,³ where Northwales writers commonly occupye *f*.

¶ *The sound of ff.*

ff In Welsh hath but the same sounde that the syngle *f* hath in Englysh. And they are faine to vse the double *ff* for the syngle *f*, because [21] they haue abused *f* in steede of *v* a consonant. But in such wordes as haue *p* for the fyrst letter of their originall (for to keepe the *orthographie*) the Learned wryte *ph*, and not *ff*, as thus, *Petr a' Phawl*, Peter and Paule.

¶ *The pronounciation of G.*

G In euery word in Welsh soundeth as the Hebrue *Gymel*:⁴ or *g* in Dutche,⁵ or as *g* in Englyshe soundeth before *a, o, u*. And marke well that *g* neuer soundeth in Welshe as it doth in English in these woordes, *George, gynger*.⁶ *G* also in Welsh sometyme (when it commeth in a reason) shall be turned into *ch*, and somtyme elided, or left cleane out of the word as thus, *a chvvedy hynny* [ac postquam] *G* is but very seldom turned into *ch*. *Gvvedy* *iavvn ne'evad* [satisfactio vel sanguis]: *koch* *Gwad, Glas* *ne 'las* [rufus vel viridis]: and not *koch* *ne glas*: *dulas* [viridis nigrescens] of *du* [niger] and *glas* [viridis].

And otherwhyle wordes compounded shall put away *g*, as these do, *serloyvv, dulas*: whose symple be these, *ser* [aster], *gloyvv* [purus], *du* [niger] *glas* [viridis].

Also *g* is added to the beginning of such words as be deriued of the Latine, whych begyn wyth *v*, as *Gvvilim, gvvic, gvvynt, Gvvent, gvvin, gvsper* of *VVilhelmus, vicus, ventus, Venta, vinum, vesper*.⁷

Moreouer, *g* intrudeth wrongeously into many wordes, namely after *n*, as *Llating* for *Llatin*, *Katering* for *Katherin*, *pring* for *prin* [vix].

[22] *Of the aspiration of H.*

H In euery word that is wrytten in Welshe, hath hys aspiration in speakyng also, and is read, euen as in these woordes of Englysh, *hard, heard, hart, hurt*:⁸ And therefore whersoever *h* is wrytten in Welshe, let it be read wythall, and not holden styll,

¹ (Four, feiv, disfig-yyr, fish, foks).

³ "Not now.—B.D."

⁴ *g* = (g), *l* = (gh).

⁵ *G* in *high* Dutch or German generally = (g) and occasionally = (gh, gh),

in *low* Dutch or Dutch of Holland = (gh), or more nearly (gh, r). Supra p. 209, note.

⁶ (Dzhordzh, dzhin'dzher.)

⁷ This is common in French and Italian. In endeavouring to say (wa) they say (gwa), and then (ga).

⁸ (Hard, herd, hard, hart, hurt).

as it is done in French and Englysh, in such wordes as be deriued out of Latync, as these: *honest, habitation, humble, habite.*¹ &c. Except when *h* is settled betwene two vowels in Welshe, wordes: for then it forceth not greatlye whether *h* be sounded or not, as in these wordes that followe: *deheu* [dexteritas], *kyhyr* [musculus] *mehein* [adept], *gwcheu, heheu,*² *gwchydd* [textor], *gohir* [mora]. &c.

Moreouer, *h* sometime sheweth the gender, & somtyme the number of the word that it is set before, as in this word, *Ar y hael*: vpon her, or their brow. Further, *h* oftentimes is caused or engendred of the concourse of vowels, *oi herwydd*, for *oi erwydd*, and sometimes by accenting, as *trugarha*, for *trugard*. Then becaus *eh* is not of the essence of the word, I leaue it for most part vnwrytten.

The sound of I.

I In Welsh hath the mere pronounciation of *i* in Latine, as learned men in our time vse to soūd it, and not as they y^t with their Iotacisme corrupting the pronounciation make a [23] diphthong of it, saying: *veidei, teibei* for *vidi, tibi*. But looke how *i* soundeth in Englysh, in these words, *singing, ringing, vinking, nigh, sight, might, right.*³ So then *i* in euery syllable in Welshe hath euen the same sounde as *e* hath in Englyshe in these wordes, *vree, see, three, bee*. And *i* is neuer sounded so broad in Welsh as it is in thys English word *I.⁴ And besyde that *i* is neuer consonant in Welsh,⁵ but euer remaining a vowel, as it doth in y^e * *Ego* Germayne tonge, or as *Iota* in the Greke. And because they that haue not tasted of the preceptes of Grammer do not lightly vnderstande what thys terme consonant meaneth: I wyll speake herein as playne as I can, for to induce them to vnderstand my meanyng.

when <i>i</i> is consonant, when <i>i</i> is vowel.	Therefore when we say in spellyng <i>ma, ma: i e, ie: at e, ste: maieste:</i> or <i>I e, Ie: s u s, sus: Jesus:</i> now in these two wordes, <i>maieste</i> , and <i>Jesus</i> , <i>i</i> is consonant. But when I spell on thys wyse: <i>i per se i, o r k, ork</i> , and wyth doying them togyther, reade <i>iork:</i> then <i>i</i> is not called consonant, but hath the name of a vowel.

² The words *gwcheu, heheu*, have not been identified.

³ (Siq·iq, riq·iq, driqk·iq, wiqkiq, nskh, sikht, mskht, rikht). Salesbury here however means (i) not (ɪ), which he generally marks by *y* Welsh. Yet Welshmen at present do not seem acute in distinguishing (i, ɪ), but use sometimes one sound and sometimes the other, supra p. 112, note 1. The (nskht) and not (nei) or (neikht) sound of *nigh* is here pointed out by the context.

⁴ Meaning (ei).

⁵ That is, never has the sound of *i* consonant or *j* in English, that is, (dzh). Salesbury never thinks of (ɜ) as a consonant, but only as the vowel (ɪ). This must be borne in mind in reading what follows, in which a curious example of the mode of spelling out words in old English is presented. Of course his argument is perfectly worthless. There is a dispute, as already mentioned, concerning the Welsh *i* preceding another vowel. Mr. E. Jones and Dr. Davies both consider Welsh *i* to be (ɜ) in such words *iawn iach, Iesus*. In English, Smith and Hart consider (ɜ) and (i) to be the same sounds, supra p. 186.

And therefore if ye lyst to reade ryghtly Welshe woordes where-
in *i* is wrytten, an other vowell immediatlye folowing (for therein
else is there no hinderance for the straunge
Reader) than must you harken how *i* (whych
I wryte for *y*) is sounded in these Englysh
woordes: *i-ane, i-arde, ielde, i elk, i elle, ielovv,*
iere, iok, iong, ioughth, lorke, iou: And thoughe
these woordes bee wrytten here [24] now
wyth *i*, in the first letter of euery one, yet it is ment that you
should reade them as the *i* were *y*, and as they had been wrytten
on thys fashion: *yane, yarde, yelde, yell, yelovv, yere, yok, yong,*
*youghth, yorke, you.*²

I for *e*, in the word
iye oculus,¹ is now
commoly wrytten
& read as it is in
Welsh.

¶ *The sound of K.*

K Foloweth the rule of *c* in euery poynt, and therefore looke for
the effect of *k*, where it is treated of the letter *c*.

¶ *The sound of L.*

L Hath no nother differēce in soūd in Welsh than in Englysh.

And note that it neyther causeth *a*, nor *o*, when they come
before it, to sounde anye more fuller in the mouth, than they do
else where sounde, commyng before anye other letter.³ And for
the playner vnderstandyng therereof, looke in the rules that do

And marke whan soeuer ye see *l* to be the fyrst letter of a worde,
that eyther the same word commeth in construction, eyther else the
woord is of an other language, and but vsurped in Welsh.

A worde beginning wyth *l* hauyng *ll* in hys [25] radical, maketh
relation of the masculin gender, as *yn y llavv* in his hand: for *yny*
llavv is in her hand.

Item thys lysping letter *l* is now smotheley receyued in some
wordes, contrary to their original nominations, as *temestl* for *tempest*;
rriscl, *trisclyn*, for *rrisc* or *rriscyn* [cortex]: *pymysl* or *pymysl* for
pemblys [quinque digiti]: so named of the resemblāce that the
rootes haue wyth mans fingers: which is now better knowen by a
more vnapte name euen *Cecut y dvvr*, and in Englysh Water small-
edge.⁴

So likewyse to this letter *l* a loytring place is lent to lurk in this
English word *syllable*.⁵ And thus much, that the wryters hercafter
maye be more precise and circumspect in accepting the vnlettereds
pronunciation by the authority of theyr hand wryting.

¹ I have not met with this form *iye*
elsewhere, except in the Heng. MS.

(ii) as in the Scotch word *ee* for *eye*.

¶ *Of the straunge sound of double ll.*

Ll can not be declared anye thyng lyke to the purpose in wryting, but onely by mouth: if ye thē wyll learne how it ought to be sounded: For (as it is sayd before of *d*) so the second *l* is added

Vide *Oecolampadium*.¹ in stede of *h*:² but looke how *Lambda* coming before *Iota* is sounded in the Greeke:³ euen so pronounce we *ll* in the Welsh. And if ye could hyt kyndely on the right and iust pronounciation of *lh* thus aspirated: not leauyng unsounded the entire energie, and the whole strength of the aspiration: than shoulde not you bee farre dissonant from the true [26] sound of our Welsh *ll*.

For the Welsh *ll* is spoken the tongue bowed by a lyttle to the roufe of the mouth, and with that somewhat extendyng it selfe betwyxt the fore teeth the lypes not all touching together)but leauing open as it were for a wyndow) the right wyke of the mouth for to breathe out wyth a thyeke aspirated spirite the same *ll*. But as I sayde before, and if ye wyll haue the very Welsh sounde of

¹ Joannes Oecolampadius, the Latinized name of Johann Hausschein, the reformer, 1482-1531, who studied Greek under both Reuchlin and Erasmus, the teachers of the rival Greek Pronunciations.

² The Welsh *ll* is not (lh) the whisper of (l), for in (lh) the breath escapes smoothly on both sides of the tongue, and the sound may be frequently heard, with very little escape of breath, in French, *table* (tablh) for (tabl') see p. 52, and in Icelandic, p. 545. But for the Welsh *ll*, one side (generally the left) of the tongue lies along the whole of the palate so as entirely to prevent the passage of air, just as for the English cl'ck (l) p. 11, by which we excite horses, and the breath is forcibly ejected from the right side, making it vibrate, at the same time that there is a considerable rattle of saliva, thus much resembling (kh) or rather (krh), and the sound is, perhaps for this reason, conceived as a guttural aspirate by Welsh grammarians. The Welsh *ll* is a voiceless or whispered consonant which I represent by (lhh) p. 6, the second (h) to the right typifying the ejection of breath on the right side, and the initial (lh) the resemblance of the sound to (lh) which when energetic may be substituted for it without loss of intelligibility, although the Welsh ear immediately detects the difference. The lips may be fully open, or only opened on the right; the effect is entirely due to the

action of the tongue and is very peculiar. At a distance *llan* (lhan) when shouted sounds like (tlan). There is no resemblance to (thlan) which Englishmen generally substitute for it. When the table of palaeotype was drawn up I had never heard the voiced form of (lhh), which for convenience, may be written (zhh). It is possible also to have palatalised varieties of both, which must then be written (ljhh, jzhh). All these forms with (hh) are very awkward, but they are sufficiently distinctive, and the sounds are very rare. In: *Il Vangelo di S. Matteo volgarizzato in dialetto Sardo Sassarese dal Can. G. Spano accompagnato da osservazioni sulla pronunzia di questo dialetto e su varj punti di rassomiglianza che il medesimo presenta con le lingue dette Celtiche, sia ne' cambiamenti iniziali, sia nel suono della lettera L*, del Principe Luigi-Luciano Bonaparte, Londra 1866, it is stated that (lhh, lzh, ljhh) occur in the Sardinian dialect of Sassari, and (lhh, lzh) in the dialect of the Isle of Man. The Prince pronounced all these sounds to me, but he laid no stress on their unilateral character, or rather disowned it. In this case (zh, dh) were really the sounds uttered for (lhh lzh), according to Mr. M. Bell's views, *Visible Speech*, p. 93, and Mr. Bell on hearing them, analyzed them thus.

³ Here Salesbury most probably elevated (li) first into (lj) and then into (ljh). See also p. 546, n. 1.

thys letter, geue eare to a Welshmā when he speaketh *culltell*, whych betokeneth a knyfe in Englysh: or *ellyll* a ghoste.

The Welshman or the Hispaniarde compose their mouthes much after one fashion whan they pronounce their *ll*,¹ sauyng that the Welsheman vttereth it with a more thicker and a more mightier spirite. The Englyshe mans tounge when he would sound *ll*, slydeth to *tl*.

The Germanes lykewyse, as writeth *Iohn Auentin*, as we do now, did in auncient time aspirate *l*, but pronouncing it somewhat hardish in the throte. And in an other place he recordeth that in old Charters he findeth *l* aspirated, nameelye in proper names, and after thys manner H L.² Thus you see how tonges though far distant, haue som affinitie in one thyng or other.

The sound of M.

[27] M In Welsh hath such a sound as ye heare it haue in Englysh or Latine: but yet it is one of the letters that be changeable in construction as thus: *mvvy*, moe, *llai ne vvvy*, lesse ormore, *mvvyvvvy*, more and more: *mal hyn*, or *val hyn*, as thus: *megis* or *vegis*, as.

The sound of N.

N Is none otherwyse sounded in Welshe then in Englyshe: but sometyme, after the Latine maner, whan it commeth before *b* or *p* in composition, it is than turned into *m*, as *ymblaen* [coram], which is compounded of *yn* and *blaen*: *amparch* [contumelia] of *an* [in] and *parch* [reverentia]: *ampvvyll* [impatientia], or *an & pvvyll* [prudentia].

N also is often times accessory, I meane such as intrudeth into many wordes, namely beginning with *c* or *k*, as *vyncar* [meus carus] *vy-car*, *vyndevv* [meus deus], for *vy-devv*, or *vynyvv*.

And because in suche woordes it is nothing of the essence thereof, I doe, but not without offence to some Readers, oftentimes omit the writing of it, thynckying that it is not more meete to admyt *n* in our so sounded wordes, than in these Latine vocables *agnus*, *magnus*, *ignis*, at what tyme they were thus barbarously sounded, *angnus*, *mangnus*, *ingnis*. After this sort crept *n* into *messanger* cōming of *message*. By y^e like analogie *potanger* (which I thynke no man doth so write) must be written for *potager*, and so corrupt *Portingal* for *Portugal*.³

[28] But I will prescribe nothing herein, least of some Remissian I be termed a Precisian.

¹ The Spanish *ll* is (lj), so that Salesbury has elevated it to (ljh), see preceding note. No doubt in attempting to imitate it he put his own tongue into the familiar Welsh position, and took it for the Spanish.

See these and other examples of an inserted *n* in *Mätzner*, *Englische Grammatik*, 1860, vol. i. p. 174.

The sound of O.

O In Welsh is sounded accordyng to the right sounding of it in

Latin: eyther else as the sounde of *o* is in these Englyshe wordes: a *Doe*, a *Roe*, a *Toe*:¹ and *o* neuer soundeth in Welsh as it doth in these wordes of Englysh: *to*, *do*, *trvo*.² But marke that *o* in Welshe going before *ll*, snundeth nothing more boystous,³ that is to say, that it inclineth to the sounde of the diphthong *ou* (as it doth in Englishe)⁴ no more than if it had gone before any other letter.

The sound of P.

P in Welsh differeth not from the Englysh sound of *p*, but *p* com-mynng in construction foloweth the rules of the Hebrue *Phe*,⁵ saving that somtyme it is turned into *b*, as thus: *pedvvar neu bemp* [quatuor vel quinque], for *pemp*. And sometyme *p* in composition is chaunged also into *b*, as whan we say *ymbell* [longe], for *ympell*. And one whyle it is left out of the compounde woordes: as whan these wordes: *kymell*, *kymorth*, be wrytten for *kypell* [compello], *kymporth* [comporto].

And an other whyle our tongue geueth vs to sound it as it were an *h*, as when we say: *ymhle* [29] *ymhlvvy*, *ymhlas* for *ymple* [?], *ym-plvvy* [in plebe] *ym-plas* [in palatio].

But *p* turned into *ph*, maketh relation of the feminine gender, as *O'i phlant*, of her children, *gwyisc i phen*, the attire of her head.

The sound of Q.

Q Is not receiued amōg the numbres of the letters in Welshe as yet, but *k* supplyeth his rowme, and vsurpeth his office in every place. And the Greekes are fayne to practice the same feate, as ye may see done. *Luc. ii* and *Ro. 16*. where *Kyryniou* is written for *Quirino*, *Kuartos* for *Quarto*.⁶

The sound of R.

R Is sounded a like in Welsh and Englysh, but *r*, in Welsh for the most part is pronounced wyth aspiration, especially being the first letter of the word. And for the aspiration *h*, they commonly

¹ (Doo, roo, too). In my observations of Welsh, the long and short *o* were invariably (oo, o). The sounds (oo, o) seem practically unknown, and not appreciated by Welchmen. That these were also the English sounds in the xvth century I infer as in p. 95.

² (Tu, duu, tuu).

³ *Boystous*, probably (buist-us) does not appear to be a misprint, but a more correct form than the modern *boisterous*. The Promptorium has *boy-stous*, the Catholicon *buistus*, the Ortus Voc. *boystous*, Chaucer *boystously* 8667 (Wright reads *boystrously* incorrectly, the *r* not occurring in Harl, 7334,

Cam. Univ. MS. Dd. 4. 24. has *bois-tously*), and in several other places, the Wycliffite version has *bostous*, Math. 9, 16, as pointed out by Mr. Way on the word in the Promptorium. The origin seems to be the Welsh *bwyst* wildness, *bwyst* savage, *bwystfl* wild beast, *bwystus* brutal ferocious, which account properly for the diphthong in the first syllable. Mr. R. Morris refers the word to *bonst*, Welsh *bost*.

⁴ This again refers to the English *toil* = (tooul).

⁵ B = (p), B = (ph) not (f).

⁶ Luke 2, 2, *Kupwivov*, Rom. 16, 23, *Kouapros*.

put to *r*,¹ as they play by *d* and *l*, euen thus: *rrvvygvyd* [fractus], *rrodres* [vanitas], *rringell* [miles], *Rufain* [Roma]. But the maner of some is to wryte one great capitall *R* (when it is the fyrst letter of a woord) for the twoo double *rr*. Also *r* serueth the turne that *n* doth in Englysh, that is to wyt, to be put betwene vowels meeting together in two sundry wordes, for to stop the vncomely gaping in spech, as ye shall perceyue by these woordes of both the [30] tongues: *yr-avvr*: a-n houre: for mother nature wyll not admyt that we should pronounce *y avvr*, or *a hour*. But stepmother Ignorance² receyueth both *r* and *n* into some places where they are abused, as *yr Llatin g*, for *y Llatin*.

¶ The sound of *S*.

S Soundeth in Welsh as it doth in Latin: neither hath it two diuers soundes as it hath in Englishe or Frenche, for when it commeth betwene two vowels in these two languages, it is so remissely and lithly sounded, as it were *z*, as by these two wordes of both the speaches it is manifestly proued, *Fessant* a *Pesant*.³

¶ The sound of *T*.

T Lykewyse hath but one sounde, and that as the Latines sound it in these wordes: *atat*, *tute*, *tegit*: Neyther do I meane that *t* in Welsh is sounded at any tyme lyke *th*, as some barbarous lypers do, who deprauē the true Latine pronounciation, reading *amath*, for *amat*, *dederith*, for *dederit*, &c.⁴

Now be it marke well thys exception, that *t* is neuer read lyke *c* thorowout the Welsh tongue, as it is commonly read of Englyshemen in Latine verbales ending in *tio*, as *Exception pronuntiatio, electio, subiectio*.

[31] Marke also, that it is the nature of *t* to be turned into *d*, and sometime into *th*, and some other tyme it is so lightly spoken, that the *t* is quite left away, and there remayneth but the *h* in steede of the *t*. But thys is to be vnderstande when *t* is the fyrst letter of a word set in construction to be construed or buylt together on thys fashion: *Na thric yuhy dvy avvr ne dair* [Ne mane in domu duas horas vel tres]. For before they be hewed, squared, and ioyned together wyth theyr tenantes and mortesses, they lye in rude and vndressed timber after this maner of sort: *Na tryc yn ty dvy avvr ne tair*. Furthermore *t* in deriuation is left out of the deriued wordes or turned in *n*, that they myght sound more pleasaunt to the eare, as ye may take these for an example: *chvvanoc* or *chvva*

The absolute
wordes

¹ To *r*, that is, two *r*'s, or *rr*. The modern form is *rh*, rather ('*rh*) than (*rh*), so that *Rhys* ('*Rh*'ys) sounds more like (*his*) than (*ris*).

² Of course "*an* houre" is the old form, and "*a*" comes from the omission of *n* before a consonant. The ignorance is therefore rather in Salesbury.

³ This occasions difficulties in writ-

ing the sounds of English words in Welsh letters.

⁴ Palsgrave says of the French *d* that he sees "no particular thyng wherof to warne the lernar saue that they sounde nat *d* of *ad* in these wordes *adultere*, *adoption*, *advice*, like *th*, as we of our tonge do in these wordes of Latine *ath athiuuandum* for *ad adiuuandum* corruptly."

noc; *gvnoc* or *gvnnroc monvveni* or *monvvenni*: *heinieu* or *heinnieu* of *chevant* [libido], *gvvynt* [ventus], *monvvent* [monumentum], *haint* [pestis].

¶ *The sound of Th.*

Th hath the semblable and lyke sound in Welsh as it hath in

Englysh in these woordes, *thorove*, *thycke*, and *thynne*:¹ but it is neuer so lythly spoken as it is commonly sounded in these other words: *that*, *thou*, *thine*, *this*.²

Moreouer *th* wrytten for the fyrst letter of any worde, sheweth the same woord to be than in construction. For there is no Welshe worde standing absolutelye that hath *th* for hys fyrst letter: but *t* is hys natieue and originall letter, for the [32] which in construction *th* is commonly vsed. Neither yet do we vse to wryte *th*, in any woord, and to reade the same as *t* or *d*, as is commonlye done in these English wordes: *Thomas*, *throne*, *treasure*, *Thaues Inne*:

Thaues In which be most uniuersally spoken after this sorte:
Tomas, *trone*, *treasure*, *Dauies Inne*.³

Item *th* sometyme signifieth the word to perteyne to the feminine gender, as *Oi thuy* of her house, otherwyse said, *oi duy*, of hys house.

The sound of V being consonant.

V specially being wrytten in thys maner of fashion *v*, soundeth in Welshe as in Englyshe or Latine, whan it is a consonant.⁴ And

it lightly neuer begynneth a worde, except the woord be constructed and ioyned wyth one or more wordes. For other *b* or *m*, being the originall or radicall letter, is transmuted or chaüged (according to the congruitie of the

tounge into *v* a consonant.

But Latine wordes begynnynge with *v*, and vsurped in the Welsh, shall receyue *g* to their fyrst letter, as is declared more at large in the treatise of the letter *G*, and sometyme *B*, as *bicar* of *vicarius*.

¶ *The sound of u beyng a vowell.*

But *u* wrytten after this manner *u*, is a vowel, and soundeth as the vulgar English people sound it in these wordes of English: *trust*, *bury*, *busy*, *Hu*[33]*berden*.⁵ But know well that it is neuer sounded in Welsh, as it is done in any of these two Englyshe wordes (notwythstanding the diuersitie of their sound) *sure*, *lucke*.⁶ Also

¹ (Thur-oo, thik, thén).

² (Dhat, dhou, dhein, dhís).

³ (Tom-as, truun), see next section under *Th*, (tree-zyyr, Dav'iz In).

⁴ The use of *v* is quite discontinued in Welsh, and *f* is always used in its place.

⁵ No doubt that he meant the sound of (trist, bíri, biz-i, Híberden). (Trist) still occurs in Scotland, (bíri) was even then more usually (ber-i) but is the common Scotch now, and (biz-i)

remains. *Huberden* is probably *Hubertden*, but I cannot find such place. There is a *Hubberston* in South Pembroke, which therefore may have the *u* pronounced in the Welsh manner and an *Ibberton* in North Dorset. These are the nearest names I can find.

⁶ (Syyr, luk). Bullokar gives (syyr) and he is particular in identifying the sound with the French *u*. Hart has (siur) meaning (syyr), p. 167, and Salesbury writes *suwr*, with the

the sound of *n*, in French, or *u*, wyth two prickes ouer the heade in Duch, or the Scottish pronunciation of *u*¹ alludeth somewhat nere vnto the sound of it in Welshe, thoughe yet none of them all, doeth so exactly (as I thynk) expresse it, as the Hebraick *Kubuts* doeth.²

For the Welsh *u* is none other thing, but a meane sounde betwyxte *u* and *y* beyng Latyne vowels.³ And therefore who so euct wyll distinctlye learne the Welsh sound of *u* let hym once geue eare to a Northen Welsh man, whan he speaketh in Welsh, the wordes that signifie in English obedient (or) *chaff singlerly: whych be these in Welshe, *uwudd*, *usun*.⁴ And this vowell *u* alone amonge all the letters in Welsh, swarueth in sound from the true Latine pronunciation.

Thys *u* is more in vre wyth vs of Northwales than wyth theim of the South parteis: whose wryters abuse it, whan they wryte thus, *un yn* for *yn un*.⁵

The sound of W.

W In Welshe and Englyshe hath but one fygure and power, though it chaunceth to haue .ij. diuers names: for in English ye call it double *uu* and in Welshe we geue it the [34] name of a

same meaning, pp. 165, 172, and indeed this passage is sufficient to shew that he did *not* mean (*syur*). Smith and Bullokar both give (*luk*).

¹ All meant for the sound of (*yy*), although at present there are occasional faint differences of sound, but not acknowledged, French (*yy*), German (*ii*), Swedish (*uu*), Scotch (*æ*).

² This of course means that Salesbury pronounced the Hebrew *קִבּוּט* (*xibbus*), generally considered as (*u*) in the same way as Welsh *u*; also he shews by writing the name *kubuts*, that he gave the same sound to the first vowel in the name, generally identified with (*i*). This serves to shew, in conjunction with his opening sentence, that his sound of Welsh *u* did not much differ from (*i*, *ɪ*), and that where he uses it for the representation of English sounds, he certainly meant (*i*) or (*ɪ*).

³ It is difficult to determine what sounds the Welshman gave to Latin *u*, *y*, because these are precisely the Welsh vowels about which there is a difficulty. The next sentence but one, however, would lead us to suppose that his Latin *u* was (*u*), as it was different from the Welsh; but what his Latin *y*, properly (*y*), may have been, cannot be said. Assuming, however, that it was (*ɪ*), then the mean sound ought to

be (*i*). By the kindness of Dr. Davies I had an opportunity of consulting three Welsh students at the Regent's Park College about the Welsh *u*, *y*. The sound of *u* in *Duw* appeared to be (*ɪ*), in *lleuwrchu* it was not distinguishable from (*i*), in *dechreuad*, *goluni*, I could not distinguish the diphthong *eu* from the English (*ai*), though the sound of *ai* in *gair* was distinctly (*ai*) and occasionally (*aai*), but *ai*, *ae*, *au* were nearly if not quite indistinguishable; at most (*ai*, *ae*, *au*) would mark the distinctions. I understood from Dr. Davies that the theoretical pronunciation of *u* was (*y*), and that in solemn declamation an attempt was made to preserve the sound, but that usually *u* became (*ii*, *i*) or even (*ɪ*). This is perfectly similar to the common German substitution of (*ii*) for (*yy*) in the pronunciation of their *ü*, an alteration never made in French. In Danish and Swedish the *y*, theoretically (*y*), becomes (*i*) or, to my ear, practically (*ɪ*, *i*).

⁴ Theoretically (*yyv*·*yd*h, *yy*·*syn*), practically (*iiv*·*id*h, *ii*·*sin*) or even (*iiv*·*id*h, *ii*·*sin*) which latter sounds, perfectly easy to English organs, would be intelligible throughout Wales.

⁵ This refers only to the orthography. See below under *y*.

syngle *u* but than soundyng it after the Latine pronūciatiō or ells as you now sounde your *oo*.¹

But the lesser Greeke *o* ioyned togyther wyth the Greke *y* made a diphthong,² or Hebraic *Vau cum puncto schurek in ventre*,³ either *oo* in these English vocables: booke, looke, boorde, woorde,⁴ shall rather expresse hys name, than hys proper nature.

But hys owne power, and peculier office in Welshe, shall there no letter nor letters more preciselye set it forth than the *vv* it selfe, or *oo* wyth the Englysh pronunciation. For all though the Germanes vse a *vv* yet in some wordes sounde they it (to my hearing) as the forther *u* were a vowel, and the latter *o* consonant,⁵ wher we the Britons sounde both *uu* wholly togyther as one vowell, wythout anye seuerall distinction, but beyng always eyther the forther or the latter parte of a dyphthonge in Englyshe on thys wyse: wyth *aw*: and in Welshe as thns: *vyth*, *avven*.⁶

And though, as I sayd before, I fynde in som aunient writers 6 for *vv*, yet in other I find *vv* in words now vsually written w^t *v* or *f* as *eithav*, for *eithav* or *eithaf*. In which kynde of wordes, bycause they of Southwales vse yet to kepe y^e pronūciatiō of it, saying *tavly* where we saye *tavlu* or *taflu* [jacio]), I doe rather vse for the more indifferencie to wryte *v* than *f*, evⁿ that they may the more aptly resolute [35] it into their woonted vowell *vv*, and we maye sounde the same after our more consonaunt acceptation. But contrarily, we saye *deunydd* where they sound *devnydd* or *defnydd* [substantia], and some corrupters *denvydd*.

The sound of X.

X Is not founde as yet in the Welshe Alphabet: For the Welshe speache hath no neede of hys office: because that suche Walshe wordes as be deducted of the Latine, turne their *x* into *s*, as doe these: *nos*, *estenna*, *escommun*, *estran*, *bices*, *escuso*, *escutio*, *Sas* or *Sais*, which come of *nox*, *extendo*, *excommunicatus*, *extraneus*, *bisextus*, *excuso*, *executio*, *Saxo*.

¹ Meaning (uu, u).

² Modern Greek pronunciation (uu) for *ou*.

³ Hebrew שְׁחָרֵק (shuureek), meaning ḥ = (uu).

⁴ (Buuk, luuk, buurd, wuurd). Bullokar and Gill also give (luuk), the shortening of the vowel into (luk) or rather (luk) is quite modern. North country pronunciation is still (luuk), though Mr. Melville Bell and Mr. Murray consider the difference between the Scotch and south country sounds to be merely qualitative, the former (luk), the latter (luk). Gill has (wurd), Butler (wuurd, wurd). *Boorde* was the spelling at that time for *board*, as in the *Promptorium*, Levins has *boord*, and Butler pronounces (buurd).

⁵ The meaning of this is difficult to

comprehend, and the difficulty is increased by the misprint *o*, for *u* or *a*. He divides *w*, as he prints it, into *vv*, which he immediately calls *u u*, but which of these two letters he considers "the forther" and which the "latter," is not plain. The best I can make out is, that he heard German *w* as (vu), thus *wann* = (vuan), nearly (vwan) or perhaps (vwan). The last is not a very inapt way of representing (bhan), and one which I have heard given by many persons, as the best means of indicating the sound of initial (bh) to English or French speakers.

⁶ Here, in *vyth*, *vv* is in the "forther" part, and in *avven* in the "latter" part of the diphthong, which ought to make Salesbury's German *vv* = (uv), as (uvan), which being dissyllabic is im-

¶ *The sound of Y.*

Y Is sounded in Welsh, as it is in these¹ English words: *yn*,

The englishe Scolers tongues

soūdyng of the Greke *ypsilō*
and yet attain not to the right
sound.³

people in anye of these two woordes
followyng: *vvyde*, *vvyng*.² Also *y*
beyng a woorde, counteruayleth the
sygnification of *the* in Englysh, and

of *Le* in Frenche, or of the Articles *Ha*, *Ho*, in Hebrue and Greeke,
as thus: *y dyn*, whose proper sygnification in Englyshe is not com-
munlye vsed, except a man shoulde saye, the person: [36] but
Le homme shall well declare it to any that shal be skilled in the
French: And by meanes hereof we vse to expresse the excellencie
that the Euangelistes attribute to *Iesus*, when they adde the Greeke
article thereto: whych they seeme aduisedly to do, omitting to
write it when they speake in the name of the Iewes or Gentiles.

The sound of Z.

Z In Welsh is vnknown, in so muche that it was neuer placed in

possible. As Salesbury does not recog-
nize (*z*) he also does not recognize (*w*),
hence *wyth aw* = with awe, is to him
(with *au*), not (with *au*). It is hope-
less to look for agreement upon this
point of theory. Suprà p. 513, n. 2.

¹ (*In*, *sin*, *iz*, *thin*, *win*). There
can be little doubt as to the pronuncia-
tion of these words because *sin*, *thin*,
win, also occur in Smith. Mr. E.
Jones remarks: "Y has two sounds in
Welsh, and it is the only letter that
has two sounds. In monosyllables as
dyn it is nearly = *ee* Eng. as *deen* (*diin*),
in polysyllables as *dynion* = *u* in *but*
(*dən-ion*)." On which Dr. Davies
observes, "rather *i* in *hint*" = (*dən-ion*).
In the examination of this sound as
pronounced by the Welsh students at
Regents Park College, (suprà p. 761,
note 3), the word *dynion* seemed more
like (*dən-ion*) than (*dən-ion*), but I
noted the following pronunciations, *gyd*
(*gəd*), *yn y* (*ən ə*), *trwyddo* (*truw'idho*),
ynddo (*ən'dho*) *bywyd* (*bəw'id*), *sydd*
(*siidh*), *llewyrchu* (*lhewarkh-i*), *tywy-*
lluch (*təwəlhh-ukh*) and (*təwəlhh-ukh*)
in North Wales; the words are all in
John i., 1-5. According to Dr. Davies
the theoretical sound in all places is (*ə*),
which is aimed at in solemn or stately
style, but in South Wales the universal
sound is (*i*, *ɪ*). In North Wales (*ə*, *ɪ*),
or (*æ*, *ɪ*) are heard. The sound may
be (*y*). The sound (*ə*), or (*æ*), is
quite familiar. Salesbury evidently
only knew *one* sound, and it is im-

portant with regard to his English
to be sure that he did *not* know the
sound (*ə*), which we do not find recog-
nized in English till the xviith century,
see p. 174. The following are the
rules usually accepted for the pronun-
ciation of Welsh *y*. In the mono-
syllables *dy*, *dyd*, *dýt*, *fy*, *myn*, *y*, *yd*,
ydd, *ym*, *yn*, *yr*, *ys*, it is pronounced
(*ə*), in all other monosyllables (*y*). In
final syllables it is always (*y*). In the
prefix *cyd*, and, sometimes *cyn*, as
cydeistedd, *cynoesoedd*, and in adjectives
and adverbs prefixed as *cryf-arfog*, it
is also (*y*). After *w* it is generally (*y*)
as *gwynfyd*, *mwynhau*, *bwyta*, but to
this rule there are several exceptions
especially if *w* is short or follows a
vowel, as *chwyrnu*, *chwysu*, *llewyrchu*,
tywyllu, *awyddu*, *cwyllys* in which it
is (*ə*). In all other cases not specified
in these rules it is (*ə*).

² (*Weid*, *weind*). The first word
is clear, but the second is doubtful.
Wynge should = *wing*, which was cer-
tainly called (*wiq*). There is a Norfolk
word *winge* to shrivel, in Wright's
Dictionary of Obsolete and Provincial
English, but that is probably (*windgh*).
Most likely *vvyng* is a misprint for
vvynde, which, even as a substantive,
is called (*weind*) by Bullokar, and
(*wind*) by Gill.

³ The Greek *υ* was originally (*y*), but
was (*i*) at the time Salesbury wrote.
What he alludes to in this marginal
observation is not clear.

A comparisō of the pronunti-
ation of the letters in Welshe,
to the pronnnciatiō of the
Greeke and Hebrue letters.

A Is most vnlyke of pronounciation
to the Hebrues *Aleph*.
B most entirely resemblth the nature
of *Beth*.

C and **K** be not vnlyke in sound vnto *Caph* and *Koph*.²

Ch, *chi*, *cheth* and *caph* wyth *raphe*,³ be of one sounde.

D soundeth as *Daleth*, *Daghessata*.⁴

Dd contayneth the power but of one letter, and that of *Dhelta*, or
of *dhalet* not *daggesset*.⁵

[41] **E** is much spoken after the sounde of the vowels *Segol* or
Epsilon.⁶

F and *Beth* wythout the poynt *Dagges* or the Grek *Veta* be as one
in sounde.⁷

ff (or) *ph* agre in pronounciation with the Greke *Phy* or the He-
braick *phe* not poynted wyth *Dages*.⁸

G is sounde as *Gimel* or the Dutch *g*.⁹

H and th' aspiration *He* be equal in power.¹⁰

I in euerye poynt agreeth wyth the Greke *Iota*.¹¹

L *Lamedh*, and *Lambdha*, disagre not in sound.¹²

Ll countreunayleth *Lambda* comming before *Iota*.¹³

M N, *Mem Nun* and *My Ny* differ not in sound.¹⁴

¹ Hence in his transcript of English words the sound of (z) must be given to his s when necessary, as indicated by other authorities.

² $\aleph = (k)$ in $\aleph\aleph = (kaph)$, $\aleph = (x)$ in $\aleph\aleph = (xooph)$.

³ That is \aleph without the dagesh point = (kh).

⁴ $\daleth = (d)$. ⁵ $\daleth = (dh)$, $\delta = (dh)$.

⁶ $\aleph\aleph$ = (seeghool') is the short (e), e was the same.

⁷ $\aleph = (bh)$, $\beta = (v)$ or (bh), *suprà* p. 518. E. A. Sophocles (*Romaic Grammar* accompanied by a *Chrestomathy with a vocabulary*, Hartford, U.S. 1842, and *without the vocabulary*, London, Trübner 1858) distinctly assigns (bh)

as the modern pronounciation of β . Prince Louis Lucien Bonaparte says that this is a mistake, and that the Constantinopolitan Greeks invariably say (v). See remarks on Icelandic *v*. *suprà* p. 549.

⁸ $\phi = (f)$ or (ph) see *suprà* p. 513, note 2; $\aleph = (ph)$.

⁹ $\aleph = (g)$, German *g* = (g) generally.

¹⁰ $\aleph = (h)$.

¹¹ "Except in being occasionally a consonant as (j).—B.D."

¹² \aleph , $\lambda = (l)$.

¹³ $\aleph = (li)$, see above p. 756, note 3, and p. 757, note 1.

¹⁴ \aleph \aleph , μ $\nu = (m, n)$.

O and *Omega* shall sound as one.¹
P doeth as well imitate *Pho* and *Phy* in sound as in other conditions.²
R hath a peculiar concinnitie with *Rho*.³
S *Sameck* and *Sigma* may go togyther well inough for their tune.⁴
T soundeth as *Teth* or *Tav dagesset* in the Hebrew.⁵
Th hath the very sound of *Theta* or *Tav* hauing no *Dages*.⁶
V beyng consonante soundeth as *Beth* wythoute *Dages* or as *Veta* doeth.⁷
V beyng vowell is read as *Kibúts* and not much vnylyke vnto *Ypsilon*.⁸
Y hath the verye sound *Ypsilon*.⁹

The thynne letters be these, *c* or *k*, *b* *p* *t* *l*.

The thycke letters are these, *ch* *ph* *ll*.

The middle letters be these, *g* *v* *dd*.

Of the sounde of ch, g, i.

Ch in welsh is but one letter. These thre letters *ch*, *g*, *i* haue neuer the like sounde in the Welshe tong, as they haue in these Englysh wordes, *chere*, *gentle*, *Iacks*.⁹

Of accente.

The obseruation of accente is it that shall do muche towarde the attaynyng of the natiue pronuniciaton of any language, in so muche that somtyme the alteration of accente shal altere also the signification of the word, as in these woordes in Greke: *Neos*, *Tomos*, *pharos*. and these in Welshe: *gvvydd*, *gvvyll*, *gvvyr*: and in English: these, *differ*, *prouide*, *denye*. &c.¹⁰

¹ Ω=(oo) in modern English pronunciation of Greek, but (oo) in modern Greek, *suprà* p. 523, as in modern Welsh, where *pob peth* is called (poob peeth) not (poob peth), and the older English, p. 96.

² *Pho* means Φ=(p), but what does *phy* mean? It should be φ, but that has been already appropriated to ff=(f). Probably *phy* is a misprint for *py*=π.

³ The "peculiar concinnitie" refers perhaps to the aspirated form β which Salesbury accepts as his *rr*, modern *rh*, now ('rh) rather than (rh).

⁴ Δ, σ taken as =(s), as they were certainly then pronounced though the determination of the original sound of each letter presents difficulties.

⁵ ט=(t), פ=(t), they are generally confounded.

⁶ θ, Π=(th).

⁷ *Suprà* p. 747, n. 6, and p. 764, n. 7.

⁸ *Kibúts* here is *kubuts* on p. 761, where see note 2. Greek υ=(i), formerly (y).

¹⁰ *Néos* young, *véos* fresh land, fallow and the Ionic gen. of *ναὺς* a ship; *ρόμος* a cut, a piece cut off, *τομός* cutting, sharp; *φάρος* any large piece of cloth, a cloth, sheet, shroud, cloak, *φάρος* lighthouse from the island *Φάρος*. In the first three words the position of the accent mark causes a difference in modern Greek pronunciation, (néos, neos, to-mos, tomos) but both the latter words are (fa'ros). But the accent mark in Welsh is only used to indicate length, and is generally omitted both in printed books (even dictionaries) and writing. *Gvvydd* (guu-ydh) pasture

The English examples are more difficult; *differ* is probably *differ defér*; *provide* is unintelligible for only *pruide* occurs, not *pruide*, though we have *pruident*. Mr. Brock suggests that *pruide* may be meant for *proved*; *denye* only occurs as *deny*, but *denier* is both *dénier* a French coin, accented *denier* (deneer) in Shakspeare, Richard III., act 1, sc. 2, last speech, v. 252—the other two passages in which it occurs are in prose,—and *denier* one who denies.

Q. 6, 12, 15, it is more probably an er. or for *kist* = *kissed*, but the word is doubtful; *lay* (lai), *mellett* has the second *l* battered and

looks like *mellett*, but the *l* is plainer in the Grenville copy, it is possibly meant for *millet* (mil'et), *murmuring* (mur-muriq), *not* (not), *over* (oov'er, over), *prevailed* (prevail'd), *ravering* (rav'eniq), *horrible* (hor'ib'l), *Satan* (saa'tan), *tormented* (torment'ed), *thorough* (thur u), *valiant* (val'jant), *business* (biz'ines), *worthy* (wurth'i), *ill* (il).

"as water in a sieve" Much ado, act 5, sc. 1, v. 6. 1623 ed., (siv), *check* (tshek), *adder* (ad'er), *eel* (iil), *fish* (fish), *gender* (dzhend'er), *engine* (en'dzhin), *humour* (hyy'mur), *honour* (on'ur), *in* (in) ? *jaundice* (dzhaun'dis), *fall* (faul); *osyll* is explained in the margin as *the blackbird*, which answers to the *ousyll* of Levins, *owsyl* of Huloet, the modern *ousel* or *ouzel* (uuz'el) is sometimes used for a blackbird *merula vulgaris*, though more commonly for the water ousel, dipper, water crow or pyet *merula aquatica*, *cinclus aquaticus*, *reason* (reez'un), *season* (seez'un), *Thomas* (Tom'as), *Thauies Inn* (Dav'iz in), *that* (dhat), *uncle* (uqk'l) or perhaps (nuqk'l) see p. 744, and note 2; *idle* (eid'l), (sindzh'iq) *singing* because (siq'iq) would be like the Welch sound of the letters.

[45] ¶ *A generall rule for the readyng of VWelsh.*

T Hough there be diuers precepts here tofore wrytten of the Welsh pronounciation of the letters, I would thinke it not ouermuch dissonant, nor yet to wyde from the purpose, to admonishe you in thys behalfe, that is, that you ought not to reade the Welsh accordyng as ye do the Englyshe or French, but euen after the reading of the latin. For in reading English or French, ye do not rede some wordes so fully as they be wrytten.

And in many other ye seme to sound the sillables more fully thā the expressed letters do giue. Which maner of reading is so vtterlye eschued in Welsh, as ye perceyue it to be exactly obserued of them that perfetely reade the Latine tonge: Nei[46]ther do I meane here to cal them perfite and Latinelike Readers as many as do reade *agnus*, *māgnus*, for *agnus*, *magnus*, *ingnis*, for *ignis*, *santus*, for *sanctus*, *savvl*, for *sal*: *sovvvl*, for *sol*: and for *mihi*, *meichei*: and *egovv*, for *ego*: *tuvv* for *tu*: and *quith ligith*, in stede of *quid legit*. &c.¹ Therefore ye must learne to forget such maner of pronounciation, agaynst ye prepare your selues to reade y^e Welsh. Moreouer, ye ought to know, that these wordes: *dringo* [scandere], *gvingo* [calcitrare], *kynga* [sermo], *myngen* [juba], *anglod* [reprehensio], *angred* [infidelitas], and the most part of suche like Welsh wordes, hauing *ng* in them, and being of moe sillables then one, shal be red as these English wordes be (but ye must admit them to be red now as of two sillables euery word) *Kynges*, *rynges*, *bryngeth*, *syngeth*: For euen as ye do not rede them *Kyn-ges*, *ryn-ges*, *bryn-geth*, *syn-geth*: but rather in thys wyse, *Kyng-es*, *ryng-es*, *bryng-eth*, *syng-eth*:² euen so do we sound *dring-o*, and not *drin-go*: *gving-o*, not *gvin-go*: *myng-en* and not *myn-gen*. Albeit, yet as *ng* may be seuered and parted in this Englysh word *syn-geth* (but the signification altred)³ so haue we some wordes in Welsh (when they are spoken) in whom the sillables may be seuered in *ng*, as in these: *an-gerth*, *Llan-gvrm*, *tringyrch*, &c.

§ 2.

William Salesbury's Account of English Pronunciation, 1547.

The Welsh text of the Introduction to Salesbury's Dictionary is here reproduced *literatim* with all the errors, misprints, false collocations of letters, antique spelling, of the original, but without the long f, and in Roman type in lieu of black letter. Those who are interested in antiquarian Welsh will prefer seeing it in this form, and will be better pleased to set it right for themselves than to have it reduced to form and order for them, while the English translation will enable the English reader to dispense with the Welsh. English and Foreign words are italicised.

There are two perfect copies of this work in the British Museum, one in the general library (628, f, 25), and one in the Grenville Library (7512). The volume is a small quarto, 7½ by 5½ inches, including the margin; the letter-press, without the headline, measuring 6½ by 3½ inches. It is in black letter, unpagged. The signatures are: none to the first sheet, Bi. Bii. Biii. C.i. Cii, and then, after a blank leaf, the signatures go from A to S, the last letter having only 6 pages. The title occupies the first page, and is in English only, as follows:

A Dictionary in Englyshe and Welfhe moche needfary to all suche Wellhemen as wil spedly learne the englyshe tongue thought vnto the kynges maiestie very mete to be sette forth to the vse of his graces subiectes in Wales: wherevnto is prefixed a litle treatyfe of the englyshe pronunciacion of the letters, by Wylliam Salesbury.

The colophon is

¶ Imprynted at London in Foster lane, by me Iohn Waley (1547). *Cum priuilegio ad imprimendum solum.*(‘,‘)

Immediately after the title is a dedication in English only: "To the Moost Victoriouse & Redowbtete prince Henry theyght by the grace of God Kynge of Englande, Fraunce and Irelande defender of the faythe And of the Church of Englande and also of Irelande in erthe the supream Hedde be al prosperitey in continuall honour." This dedication extends over three pages, and concludes: "Youre poore and humble subiecte Wyllyam Salesburye."

Then follows the address to the reader, occupying five pages. The beginning of each page is marked in the following transcript by a black figure in brackets as [5], and in numbering the pages of the book I reckon the title as p. 1, and the back of it as p. 2. On p. 11 commences the actual treatise on the sounds of the letters, and, counting the two blank pages at the end of the third sheet, on p. 25 begins the dictionary itself of which the first page is annexed as a specimen, shewing the arrangement in four columns and the many Welsh words left untranslated. Indeed, as may be expected, it is extremely deficient, but it extends to 141 pages.

The English translation of the Welsh address to the reader and account of English Pronunciation was kindly made by Mr. E. Jones, of the Hibernian Schools, Liverpool, and obligingly revised by Dr. Benjamin Davies, of Regent's Park College, London, one of the Council of the Philological Society. No attempt has been made to imitate Salesbury's quaintness of language, but the meaning of the words is given as carefully as possible. In this English translation, where Salesbury cites an English word in the spelling of the time, it is printed in small capitals, his pronunciation in Welsh characters is subjoined in italics, and then the interpretation which I give to that phonetic transcript is added in palaeotype in a parenthesis, and when Salesbury gives no phonetic transcript, the conjectured palaeotypic form is given. If Salesbury adds the meaning in Welsh this is subjoined also in Italics, and a translation of it into Latin is annexed in brackets. When Salesbury gives no translation the Latin is still added. Thus: "LADDRE *lad-dr* (lad'er) *y scol* [scala]," give the old English spelling LADDRE, Salesbury's phonetic Welsh transcript *lad-dr*, the palaeotypic meaning of the same (lad'er), the Welsh translation of the original word *y scol*, and the Latin translation of the Welsh translation [scala]. References are added throughout to the page in which the passage is quoted or in which illustrative remarks occur, and these are inclosed in a parenthesis thus (p. 61), meaning, *suprà* page 61. This will avoid the necessity of subjoining footnotes. After the specimen of the dictionary is added an alphabetical list of all the words of which Salesbury gives or indicates the pronunciation, in this or the foregoing tract, with a reference to the different pages in this book where it is to be found, supplementing the references in the text.

[5] ¶ William Salesbury to the reader.

Possibly, gentle reader, it would not have been irrelevant to shew and declare what advantage, what gain and what profit, would result to any one, who should devote any time to reading and studying this book, but that his majesty, the king, together with his council has received it, as an acceptable and suitable help and aid for the induction of the principality into the English language, and because the inclining of the heart of the king (as shewn by the holy scripture) is from God, who I pray may preserve his grace in long life prosperity and success. Amen. But now to come to the most important and necessary subject to be treated of in this place, that is, for the sake of Welshmen who do not possess more learning than the bare ability to read their own tongue, and of those only who may, as they ought, desire instruction in reading and understanding the English language, a language at present renowned for all excellent learning, full of talent and victory, a language moreover not difficult to learn, which persons of every nation acquire fluently, without regarding trouble and expense, and to Welshmen more necessary than to any other people, however much we may neglect it. For these untaught persons, then, so much elementary teaching was written, [6] and not for the well versed. But I desire of you who are possessed of higher attainments, and know how valuable is education, that you would after the manner of Saint Paul, make yourselves all things to all men, and condescend also (as the same Paul says,) since babes are fed with bread and milk, to feed the ignorant with the crumbs of your superior knowledge, and not with the excellency of high scholarship. And thus if you do not hide the treasure of the Lord, but dispense it as opportunity offers, by supplying it to those in need of learning and wisdom, and other like things, I trust God may grant to them such a spirit, that they may not like swine, trample your gems and precious stones under their feet, and that they may not rise like dogs against you, ready to bite you. But now again to leave all digression and to begin to set forth the object and import of this book. Inasmuch as all the letters are not said and sounded alike in English and in Welsh, first of all we declare and affirm the mode in which they are read and sounded according to the pronunciation of the English people, with examples of suitable words following. After which the English Wordbook or Dictionary begins, which means a collection of English words, for the whole book is, indeed, a collection of English words. In which if you carefully notice, order and arrangement are kept: for the words are not mixed helter skelter in it, as they might happen to tumble to my mind at first thought. But with constant reflection, for the sake of the [7] unlearned,

every word (so far as memory served) was chased to its own proper position. Thus all the words having *a* for the first letter were at the outset collected into the same place. Then all words beginning with *b* were placed apart. So with *c*, and *ch*, and *d*. Thus also of all the rest, every word is ranged under the standard of its captain letter. Thus when you require the English for any Welsh word; First observe what is the first letter naturally; if it is *a* for example, look for the word under the series *a*, and having found the word, in the opposite column for English you will get the English for it. But be very careful not to be misled, to seek amiss

a word out of its own proper place. For example, if you trace the words in the form and aspect in which they lie in the following line *Mae i mi gangen dec o vedwen* [Est mihi ramus pulcher betullae]. For it will not serve you to look for the English for *gangen* among words which begin with *g*, but under *k*, because the pure radical word is *kangen* not *gangen*, and the English meaning will be found opposite the radical word. For it is a peculiarity of the Welsh to soften the initial consonant, as *k* to *g*, *t* to *d*, *b* to *v*, in certain positions, as in the words *dec o vedwen* [ramus betullae]. Therefore you must always consider what is the initial letter when the word stands alone, out of connection, as I observed above. So it is in the normal natural utterance of the word that you are to seek, if you wish to find every word in this lexicon. For as none but an idiot would expect, [8] when going to gather osiers, to meet with rods growing in the form they are seen after being plaited round the frame-work of a basket, in the same manner none but an unskilful person will expect to find every word in the dictionary in the form and shape in which it is found when woven in the partition wall of a sentence. In addition to all I have already said observe this further direction, Advice to such of you, Welshmen, as desire to learn English Welshmen at your own firesides. You cannot fail to know that in English they do not read and pronounce every word literally and fully as it is written. For example, God BE WYTH you, which the commonalty pronounce *God biwio* (God bii-wi-ro). And a heap of other words also are written, as to some of their syllables in the same way, but are not pronounced in the same way, as the following: BOWE, CROWE, TROWE which are read *bo* (boo) *bwa* [arcus], *kro* (kroo) *bran* [cornix], *tro* (troo) *tybyeid* [opinor]. The following also have precisely the same termination as the above but are differently read, COWE, LOWE, NOWE, NAROWE, SPAROWE, which are usually spoken *kou* (kou) *buwoch* [vacca], *low* (lou) *lowio* [mugire], *nou* (nou) *yn awr* [nunc], *narrw* (nar-u) *kyfing* [angustus], *sparw* (spar-u) *ederyn y to* [passer]. With regard to such cases as the reader may find too difficult to remember, much less write, the best advice I have for such as may not be able to go to England (as I have already said), where the

[11] ¶ The nature and sound of the above letters in English.

A in English is of the same sound as *a* in Welsh, as is evident in these words of English, **ALE** *aal* (aal) *korw* [cerevisia]; **PALE** *paal* (paal) [pallidus], **SALE** *sal* (saal) [venditio] (p. 61). Except sometimes **A** has the sound of the diphthong *aw* (au) especially when it precedes **L** or **LL**, as may be more clearly seen in these words: **BALDE** *bawld* (bawld) *moel* [calvus], **BALL** *bawl* (bawl) *pel* [pila], **WALL** *wawl* (wawl) *gwal* [murus] (p. 143, 194). But in certain words they place **A** sometimes, as we should consider it, rather carelessly according to our custom, out of its own power and rather metamorphosed into the vowel *e*, as **EASE** *ees* (ecz) *esmwythdra* [otium], **LEAVE** *leef* (lcev) *kenad* [venia, licentia], **SEA** *see* (sec) *mor* [mare], **YEA** *ie* (jee) [etiam] (p. 80). But words of this kind will not often perplex thee, gentle reader.

B in English and *b* in Welsh have the same sound, as in these words: **BABE** *baab* (baab) *baban* [infans], **BREDE** *bred* (breed, bred) *bara* [panis]. And **B** in English is not changed for another letter as is done with *b* in Welsh.

C in reading English, as in Welsh, has the same sound, except before **E**, **I**, **Y**, for before these three letters it is sounded as *s* (s). For example **FACE** *ffas* (faas) *wyneb* [facies], **GRACIOUS** *grasiws* (graa'si,us) *rradllawn* [gratiosus], **CONDICION** *condisywn* (kondis'iun) [conditio].

Ch is not at all like in English and in Welsh. And there are not in Welsh any letter or letters which correctly represent it, but the sound of *tsi* (tsi, tsj) is as like it as brass is to gold, as in the following word **CHURCHE** *tsurts* (tshirtsh) *ecleis* [ecclesia].

[12] **D** in Welsh and English do not disagree in their powers, as may be understood in these words from the two languages: *DUKE* *duwk* (dyyk) *duc* [dux], *DART* *dart* (dart) *dart* [jaculum]. But note this well when you see two *dd* coming together in English, they have not the power of *dd* in Welsh (*dh*), but each retains its usual sound. And it does not soften, on the contrary it hardens the sound, as in the following words: *LADDRE* *lad-dr* (lad'er) *yscol* [scala], *BLADD'* *blad-der* (blad'er) *chwysigen* [vesica]. **D** also is the termination of the perfect, imperfect, and pluperfect tenses, as in the word *LOVED* (luvd) *carwn*, *kereis*, *carysswn* [amabam, amavi, amaveram].

E is pronounced in English sometimes as *e* Welsh (*e*), sometimes as *i* Welsh (*i*), and sometimes at the end of words, it is silent or mute as *sheva* in Hebrew, or as you see *w* at the end of these words in Welsh: *kynddelw*, *ardelw*, *kefnderw* *syberw*, *buddelw*, *marwnad*, *catwderw*, in which the *w* is melted away in reading and speaking and so they are sounded *kyndell*, *ardel*, *kefnder*, *syber*, *budel*, *marnad*, *catderw*. Similarly **E** final in English words is melted away, for the most part, from the end of every word in pronunciation, as in the following words: *EMPEROURE* pronounced *emperwr* (em'perur), and not *emperwrey* (emperuu·rei) which word in Welsh signifies *ymerawtr* [imperator]. And so *EVERMORE* *efermwr* (ev'er-moor', evermuur', evermwor') *tragowydd* [semper]. In the two English words above, the two first **E**, *e*, of each, has the same sound as the Welsh *e* or Latin *e*, or the Greek *epsilon*. And the final **E** is mute as *w* is in the words I have already mentioned. Moreover especially when **E** final follows **L** or **R**, [13] it is not heard from English tongues. But if it is heard at all, it is rather before the **L** or **R** than after, as they pronounce the following words: *ABLE*, *SABLE*, *TWYNCLE*, *WRYNCLE*, *THONDRE*, *WONDRE*, which words, together with others of the same termination, in hearing an Englishman read them, seem as if written without the **E**, thus: *abl*, *sabl*, *twinkl*, *wrinkl*, *thwndr*, *wndr*, (aa'b'l, saa'b'l, twi'k'l, wri'k'l, thun'd'r, wun'd'r), [potens, niger, scintillare, ruga, tonitru, miraculum,]; or as if the **E** were written before the **L** or **R**: thus *SADDELL*, *THONDER* (sad'el, thun'der), [ephippium, tonitru.] But such pronunciations ought not to be strange to us Welshmen, for do we not also in reading melt away two or three letters at times, as may be seen in the following: *popl* for *popol* [populus], *kwbl* for *kwbul* [totus], *papr* and *eithr*, where we should say *papyr* [papyrus] and *eythyr* [sed]. But every tongue must be pardoned its peculiarities, and every language allowed its idioms. Further it is the nature of **E** final to soften and prolong the syllable which precedes it as: *HOPE* *hoop* (hoop) *gobeith* [spes], *BAKE* *baak* (baak) *poby* [coquere panem ut pistor], *CHESE* *tsis* (tshiiz) *caws* [caseus]. But observe carefully the word *CHESE*, for the first **E** has the sound of *i* in our tongue, and the **E** final is mute as before described. **E** also before **s** at the end of plural nouns,—that is, (for the sake of the unlearned,) names which signify a number of anything,—disappears in pronunciation, as in the following: *KYNGES*, *brenhinedd* [reges], *FRENDES* *kereint* [amici], *TENTES* *pepyll* [tentoria],

yw [14]. which are read *kings* (kiqz), *frinds* (friindz), *tents* (tents). [14] And be it known to the reader that this rule does not apply to every plural, for when c, ch, g, or another e precedes the said e the rule fails, for then e is pronounced obscurely or as our y (i), as in the following DYCHES *deitsys* (deitsh'iz) *fossydd* [fossae], FACES *ffaces* (faas'ez) *wynebeu* [facies], ORANGES *oreintsys* (or'eindzhiz) *afale orayds* [aurantia], TREES *triys* (trii'iz) *prenneu* [arbores].

F in English has singly as much power as two Welsh *f, f*, with their heads pressed together, thus: FOLE *ffwl* (fuul), *ffwl ne ynuyd* [stultus].

FF and F in English are pronounced alike but FF harder than F, which has a lighter sound, as in CHEFE *tsiff* (tshiif) *pennaf* [princeps]; FF hard as in SUFFRE *swfffer* (suf'fer) *diaddef* [pati].

G is sounded in English very similar to CH, so similar indeed that Englishmen not well educated write the one for the other, as in the word CHURGE for CHURCHE *tsiurts* (tshirtsh) *eglwys* [ecclesia]. But g in English before a, o, u, and sometimes before e or y is not distinguished from g Welsh (g), thus GALAUNT *galawnt* (gal'aunt) [fortis] (p. 143), GELDING *gelding* (geld'iq) [canterius], FLAGE *plaag* (plaag) *pla* [pestis], GOD (god) *dyw* [deus], GUTTE *gut* (gut) *coluddyn* [intestinum], GYLBERT *gilbert* (gil'bert). But when g comes before e, i, or y, it is sounded as CH in English, or as tsadde ʔ in Hebrew for the most part, as GYNGER *tsintsir* (dzhin'dzher) *sinsir* [zinziher]. Note well this again when two gg come together, they are sounded as one, like g Welsh, thus: BEGGYNGE *begging* (beg'iq) *yn cardota* [mendicans], NAGGE *nag* (nag) *keffylyn* [mannus], EGGE *eg* (eg) *wy* [ovum].

[15] Gh has the same sound as our *ch*, except that they sound *gh* softly, not in the neck, and we sound *ch* from the depth of our throats and more harshly (p. 210), and as it is disagreeable to the English to hear the grating sound of this letter so Welshmen in the South of Wales avoid it as much as possible. For you hear them say *hwaer*, and *hwech* (whair, whekh), where we in the North of Wales say *chwaer*, and *chwech* (khwair, khwekh; kwhair, kwhekh?).

And still I find that even we often avoid pronouncing *ch*, as we prefer saying *chwegwaith* (kwegw'aith) for *chwechgwaith* (kwhekh-gwaith) [sexies], and *chwergain* (kwhei'gain, kwhee'igain?) for *chwechrgain* (kwhekh yy'gain) [centum et viginti]. And in my opinion the Greeks were not overfond of this sound when they transferred from the Hebrew, *Iohannes* instead of *Iochanna*, and *Isaac* for *Iitschach*. And in a similar manner the Latins had no great liking for the above letter, for they follow the Greeks in transferring from Hebrew, and say *mihi* and *nihil* for *michi* and *nichil* (mi'hi ni'n'il, mik'h'i nih'il). But to conclude you may take this guttural as light in speaking English as you can.

H is precisely the same in English as in Welsh, as we see in HAUE *haf* (hav) *hwde* [accipe], HART *hart* (hart) *calon ne carw* [cor vel cervus], HOLY *holy* (hool'i, hol'i) *santaidd ne kelyn* [sanctus vel aquifolium]. But in some anglicized Latin words h is not sounded

I will not mention that we are at present so negligent as to say *gwydd* (gwydh) for *gwehydd* (gwee'hydh) [*textor*].

[16] **I** in their language is equivalent to the following two letters in ours *ei* (ei), but they are compressed so as to be pronounced in one sound or a diphthong, as in that word of theirs I *ei* (ei, ei) *mi* [*ego*] or *myfi* [*egomet*]. But when it is joined to another vowel it has the sound of *e* English, and as they are so near alike, I have met with some in hesitation and doubt, whether they should write certain words with *i* or with *e*, as the following: *MALESTIE*, *GENTYLL*, *GELOUSYE*, and some writing *HABREIOUNE* and others *HEBERGYN lluryg* [*lorica*]. Thus I observe the same likeness between these three English letters *ch*, *e*, and *i*, as exists between pewter and silver, that at first sight they appear very like each other, but on close examination they differ. For example, *IESU tsiesuw* (Dzhee'zyy) *Iesu* [*Jesus*], *IOHN tsion* (Dzhon) and *sion* [*Shon*] by corrupt pronunciation, and *Ienan* [*Iohannes*] in pure Welsh, *IOYNT tsioynt* (dzhoint) *kymal* [*junctura*] (p. 131).

K has the same power in Welsh as in English, but it is not so frequent at the commencement of words as may be seen in the following: *BOKE buk* (buuk) *llyfyr* [*liber*], *BUCKE bwck* (buk) *bwch* [*dama mas*]: *k* at the beginning of words *KYNGE king* (kiq) *brenhin* [*rex*], *KNOT* (knot) *kwlm* [*nodus*]; *KENT*.

L in the two languages does not differ in sound, as *LYLY lili* (lil'i) [*lilium*], *LADY ladi* (laa'di) *arglwyddes* [*domina*], *LAD* (lad) *bachken* [*juvenis*].

Ll in English is nothing like in sound to our *ll* (lhh), and our *ll* will no foreigner ever learn to pronounce properly except in youth.

Ll in English has no distinct name, it is simply called *dwbyl l* (dub·il el) or twofold *l*, and it has always the sound of *l*, or of *lambda* [17] before *iota*. But in some districts of England it is sounded like *w* (u), thus *bowd* (boould) for *BOLD* [*audax*], *bw* (buu) for *BULL* [*taurus*]; *caw* (kau) for *CALL* [*voco*]. (p. 194.) But this pronunciation is merely a provincialism, and not to be imitated unless you wish to lisp like these lispers.

M and **N** are of the same sound in the two languages (and indeed in every other language I know). In English they are spoken thus *man* (man) *gwr* [*vir*], *men* (men) *gwyr* [*viri*].

O takes the sound of *o* (o) in some words, and in others the sound of *w* (u); thus *to to* (too) *bys troet* [*digitus pedis*], so *so* (soo) *velly* [*sic*], *two tw* (tuu) *dau* [*duo*], *to tw* (tu) *ar, at, i* [*ad*], *SCHOLE scuwl* (skuul) *yscol* [*schola*]. (p. 93.)

O also before *ld* or *ll* is pronounced as though *w* were inserted between them, thus *COLDE cowld* (koould) *oer* [*frigidus*], *BOLLE bowl* (booul) [*crater*], *TOLLE towl* (tooul) *toll* [*vectigal*] (p. 194). But two *oo* together are sounded like *w* in Welsh (u), as *goon gud* (gud, guud) *da* [*bonus*], *poore pur* (puur) *tlawd* [*pauper*] (p. 93).

Welsh, for in these languages it is sometimes changed in words to *ph*.

But in English it has a permanent sound in every word as *PAPYR* *papyr* (paa'pir) [papyrus], *PAPPE* *papp* (pap) *bron gwraic ne ywa* [mamma vel infantium cibus], *PENNE* *pinn yscrifenny* [calamus]. And an Englishman pronounces the letter *p* thus, in the phrase *AND WITH A PENNE* (and with a pen) *ac a phinn* [et cum calamo], and not *WITH A PHENNE* OR *FFENNE* with double *ef* (with a fen).

Q is a strange letter in Welsh, and scarcely more at home in English. It is the same in sound as *k*, [18] as *QUENE* *kwin* (kwiin) *brenhines* [regina], *QUARTER* *kwarter* (kwart'er) *chwarter* [quarta pars]; *QUAYLE* (kwail) *sofyliar* [coturnix]. And bear in mind that *u* is the companion of *q*, for *q* is never seen without *u* following it, as the cuckoo without her screecher.

R is of the same nature in the two languages except that *r* is never doubled or aspirated at the beginning of words as in Greek and Welsh.

Rhoma, *rrufain* or *rhufain* [Roma], but English words beginning with *r* are thus pronounced: *RYGHT* *richt* (rikht) *iawn* [rectus], *RENT* *rent* (rent) [scissura], *ROS* (rooz) *ros ne rosim* [rosa].

S in these languages is of the same sound, thus *SYR* *syr* (sir) [dominus], *SEASON* *seesyn* (seez'in) *amser amserawl ne amser kyfaddas* [tempestas, tempestivus vel occasio]. But when *s* comes between two vowels it has the flat sound, or it is lisped, thus *MUSE* *muwus* (myyz) *meuyrio* [meditari], *MASE* *maas* (maaz) *madrondot* [stupor].

S when added to the end of a word in the singular, makes it plural, or to signify more than one, as *HANDE* *hand* (hand) is *llaw* [una manus], *HANDES* *hands* (handz) are *llawe ne ddwylo* [plures vel duæ manus], *NAYLE* *nayl* (nail) *ewin ne hoyl hayarn* [unguis vel ferreus clavus], *NAYLES* *nayls* (nailz) *ewinedd ne hoylion heyrn* [ungues vel ferrei clavi], *RAYLE* *rayl* (rail) *canllaw* [cancellus], *RAYLES* *rayls* (railz) *canllawen ne ederin regen yr yd* [cancelli vel creces pratenses] (p. 119).

Sh when coming before a vowel is equivalent to this combination *ssi*, thus *SHAPPE* *ssiapp* (shap) *gwedd ne lun* [species vel forma], *SHEPE* *ssiip* (shiip) *dauad ne ddeueid* [ovis vel oves].

Sh coming after a vowel is pronounced *iss*, thus *ASSHE* *aiss* (ash, aish?) *onnen* [fraxinus]; *WASSHE* *waiss* (wash, waish?) *golchi* [lavare]. And wherever it is met with it hisses, like a roused serpent, [19] not unlike the Hebrew letter called *schin* שׁ. And if you wish further information respecting this sound, you should listen to the hissing voice of shellfish when they begin to boil. Take this as an homely illustration lest you may not all be able to find an English tongue at hand to instruct you.

T also shews the same face to an Englishman as to a Welshman, as *TRESURE* *tresuor* (trez'yyr) *trysor* [thesaurus], *TOURE* *towr* (tour) *twr* [turrus], *TOP* *top* (top) *nen* [vertex].

Th in English rhymes with the same combination in Welsh (th), but in some words it reads flat like our *dd* (dh). Examples of the Welsh sound of *th*; *THROUGH* *thruwch* (thruukh) *trywodd* [per],

thystl yscall: Eglurwch am th/ val awn dd/ ni *this* ddys hwn/ hon/ ne hyn. velly ddym nine yn cam arfer yn sathredic o dd/ dros th/ yny gair yma (ddialaydd) yn lle (dialayth) Nota hyn hefyd/ y darlleant th/ val t/ yny geirieu hynn *Thomas* tomas: *throne* trwn pall-

THYSTLE *thystl* (thi's-tl) *yscall* [carduus]. Examples of **TH** like our *dd*; **THIS** *ddys* (dhis) *hwn hon ne hyn* [hic haec vel hoc]. So also in familiar conversation we mispronounce *dd* for *th* in the word *ddialaydd* for *dialayth* [sine tristicii]. Observe also that they read **TH** as *t* in these words: **THOMAS** *tomas* (Tom'as), **THRONE** *trwn* (truun) *pall* [solium].

U consonant is not distinguished in power in Welsh and English, thus: **VINE** *vein* (vein) *gwin wydden* [vitis], **VAYNE** *rayn* (vain) *gwythen ne wac* [vena vel vanus] (p. 119), **VELUET** *velfet* (vel-vet) *melfet* [holosericum]. But **U** vowel answers to the power of the two Welsh letters *u*, *w*, and its usual power is *uw*, as shewn in the following words **TRUE** *truw* (tryy) *kywir* [verus], **VERTUE** *vertuuo* (ver'tyy) *rhinwedd* [virtus]. And sometimes they give it its own proper sound and pronounce it like the Latins, or like our *w*, as [20] in the words **BUCKE** *buck* (buk) *buch* [dama mas], **LUST** *lust* (lust) *chwant* [libido]. But it is seldom this vowel sound corresponds with the sound we give the same letter, but it does in some cases as in **BUSY** *busi* (biz-i) *prysur ne ymyrus* [occupatus vel se immiscens] (p. 164).

W English and *w* Welsh do not differ in sound, as **WAVE** *waw* (wau) *tonn ar vor* [unda maris] (p. 143), **WYNE** *wein* (wein) *gwin* [vinum], **WYNNE** *wynn* (win) *ennill* [pretium ferre]. But the English name of this letter is *dowbyl uw* (dou-bil yy), that is double *u*. And the English in teaching children to spell, take it as a consonant, and not as a vowel, or *w per se* (u per see) as we take it. But still we use it in the most easy mode for youth learning to read intelligently.

Also **w** is mute at the end of words in English, as in the following **AWE**, **BOWE**, **WOWE**, which we pronounce thus: *a* (aa) *ofyn* [terror] (p. 143), *bo* (boo) *bwa* [arcus] (p. 150), *w* (uu, wuu?) *kary* [amare, ut procius petere].

X Neither is *x* much at home in English any more than in Welsh, and the sound is *cs* (ks) or *gs* (gz) as in the words **FLAXE** *flacs* (flaks) *llin* [linum], **AXE** *ags* (agz) *bwyall* [securis]. Latin words in their passage into English or Welsh exchange *x* for *s*, as in the words *crux* **CROSSE** *croes*, or *crws*, *exemplum* *esampyl*, *extendo* *estennaf*, *excommunicatus* *escomyn*.

Y often has the sound of the diphthong *ei* (ei, oi), as **THYNE** *ddein* (dhein) *tau ne eiddot* [tuus vel tibi], and its own sound as in the word **THYNNE** *thynn* (thin) *teneu* [gracilis] (p. 111).

y^e with a tittle like a small *e* above makes **THE** English, as **Y^e MAN** *dle man* (dhe man) *y gwr* [vir ille], **Y^e OXE** *dde ocs* (dhe oks) *y^r ych* [bos ille].

y^t with a small cross above it, is equal [21] at full to **THAT** *ddat* (dhat) *hyny ne yr hwn* [ille vel qui].

y^u with *u* above it, signifies **THOU** *ddow* (thou) *ti ne tydi* [tu].

Y, The old English writers had a letter þ very much like y, only that the stem was not curved upward as a scythe like the stem of the y, and it is not unlike in shape to the Roman x or the Greek *upsilon* *Υ*, or the Hebrew *ghayn* y, and as near as I can remember, an old English reader once called the name of it *ddorn* (dhorn), and he pronounced it like our *dd* (dh) or like the Greek *delta* δ (dh). But it is not in use among the English since the art of printing was introduced, but x is sometimes used for it, and sometimes th. And on this account it is more difficult for a stranger to pronounce their th in English, because it serves sometimes the place of the letter they call *ddorn* (dhorn), as may be noticed in the foregoing remarks. So that when that effeminate lisping letter was lost from the English, it was introduced to us the Welsh, and we commenced lisping like nursing women, and to say *dd* (dh) for *d* (d), *th* (th) for *t* (t), and *d* for *t*, *b* and *ph* (f) for *p* &c. But pardon the length of this digression of speech, and I will bring my remarks respecting the other letters sooner to a close.

Z was also frequently used instead of s at the end of words as KYNGEZ *kings* (kiqz) *brenhinedd* [reges]. Some also used it for x, and others (which was more contrary to nature) for gh in the words RYZT *richt* (rikht) *kyflawn* [rectus], KNYZT *knicht* (kniht) *marchawg* *vrddol* [eques].

& This is not a letter but an abbreviation for a whole word as may be seen from the following [22] how frequently it is used in every language. When written in full it is *et* in Latin, *and* in English, *ac* in Welsh.

¶ The table below gives a summary and the substance of all the above rules: and therefore it was not considered necessary to give more explanation or instruction respecting it to any one desirous to read the book from beginning to end.

INDEX TO THE ENGLISH AND LATIN WORDS OF WHICH THE PRONUNCIATION IS GIVEN OR INDICATED IN SALESBURY'S TWO TRACTS.

In the following list the words quoted from the Treatise on Welsh pronunciation are given in italics, followed by the old spelling there used by Salesbury in small capitals, and the pronunciation indicated. In that treatise the pronunciation is seldom or ever explained in Welsh letters, but some important part of it is indicated, and the rest has been added from conjecture. The numbers which follow give the pages in this work where the word is referred to, (the small upper figure being the number of the footnote,) the bracketed numbers the page of the tract as here printed, and the capitals the letters under which the words occur.

The words quoted from the Treatise on English pronunciation are in Roman letters, followed by the old spelling in small capitals, the Welsh transliteration in italics, the palaeotypic pronunciation in (), the Welsh interpretation in italics, and its translation into Latin in [], and finally references as before.

§ 3. *John Hart's Phonetic Writing, 1569, and the Pronunciation of French in XVIth Century.*

Since the account of John Hart's *Orthographie* (p. 35) was in type, the original manuscript of his "former treatise," bearing date 1551, has been identified in the British Museum, and some account of it is given in the annexed footnote.¹ It may be observed that

¹ Mr. Brock, who is ever on the look out for unpublished treatises interesting to the Early English Text Society, called my attention, through Mr. Furnivall, to the MS. Reg. 17. C. vii., which was described in the printed catalogue of those MSS. as "John Hare's Censure of the English Language, A.D. 1551, paper." It is a small thin quarto of 117 folios, the first two pages not numbered, and the others pagod from 1 to 230, 19 lines in a page, about 7 words in a line, in a fine English hand of the XVIth century, carefully but peculiarly spelled, by no means according to Hart's recommendations. The Latin quotations are in an Italian hand. It was labelled on the back "Hare on the English Language." Being desirous of getting at the author's account of our sounds, when I examined the MS. on 28 Oct. 1868, I skipped the preliminary matter and at once attacked the 6th and 8th chapters; "Of the powers and shaping of letters, and first of the voels," and "of the affinite of consonants." I was immediately struck with many peculiarities of expression and opinion which I was familiar with in Hart's *Orthographie*, and no other book. On turning to the dedication to Edward VI., I found (p. 4, l. 8,) the name of the author distinctly as John Hart, not Hare, although the t was written so as to mislead a cursory reader, but not one familiar with the handwriting. Then,

similarly, in Hart's *Orthographie* the author's name is mentioned in the dedication: "To the doubtfull of the English *Orthographie* John Hart Chester heralt wisheth all health and prosperitie," which had not been observed when p. 35, l. 20, was printed, and not on the title. On comparing this printed book with the MS. I found many passages and quotations verbatim the same; see especially the first chapters of the MS. and printed book "what letters ar, and of their right use," where *right* is not in the MS. The identity was thus securely established, and the MS. has consequently been re-lettered: "Hart on English Orthography, 1551."

The title of the MS. is: "The Opening of the unreasonable writing of our inglish toung: wherein is shewid what necessarili is to be left, and what folowed for the perfect writing ther-of." And the following lines, on the fly leaf, in the author's hand-writing, seem to shew that this first draught, thus curiously brought to light after 317 years' repose, was never intended for publication, but was perhaps to be followed by another treatise, which was of course the printed book.

"The Booke to the Author.

"Father, keep me still with the, I the

his pronunciation remained practically constant during these eighteen years, and the chief difference of the treatises is the greater extent of the second, and the important introduction of a phonetic alphabet, followed by a full example.

"Abuse," meaning the wrongful use of letters, that is applying them to sounds for which they were not intended in the Latin alphabet, is a favourite term of Hart's, and with the curious orthography *voel* for *vowel*, led me to suspect the real author from the first. The following description of the vowels is slightly different from, and must be considered as supplementary to those given above in the pages hereafter cited; the bracket figures give the pages of the MS. A few remarks are also inserted in brackets.

"[77] Lett us begin then with an opened mouth so mouch as a man may (though lesse wold serve) therwith sounding from the breast, and he shall of force bring forth one simple sound which we mark with the a (p. 63): and making your mouth lesse so as the inner part of your tounge may touch the lyke inner part of your [78] upper iowes you shall with your voice from your brest make that sound wherefore we doo often (and shuld alwais) writ the e (p. 80): then somthing your tounge further furth with your iowes, leaving but the forepart open, and your sound from the brest wil make the voice wherefore we doo often (and shuld alwais) write the i: forthli a man making his lippes in souch a round, as the compass of the topp of his litell finger (his teeth not touching, nor tounge the upper iowes) with the sound from the brest he shall make the simple

voice wherefore we doo often (and shuld alwais) writ the o (p. 93); and last of all holding so stil his tounge and teeth untoucht shrinking his lippes to so litell a hole as the breath may issue, with the sound from [79] the breast he shal of force make that simple voice wherefore we doo sometimes rightly (and shuld alwais) write the u [certainly (u) here]. . . . [81]. Now as for the a, we use in his proper power as we ought, and as other nations have alwais doone (p. 63). But I find that we abuse all the others, and first of the e, which most communely we use properly: as in theis wordes better and over: but often we change his sound making yt to usurp the power of the i, as in we, be & he (p. 80), in which sound we use the i properly: as in theis wordes sinne, in and him. Wherefore this letter e, shuld have his auncient sound as other nations use yt, and which is as we sound yt in better and ever. The profit thereof shuldebe, that [83] we shuld not feare the mystating of his sound in i: as we have longe doon: and therefore (and partly for lak of a note for time) we have communely abused the diphthongs ey or ei, ay or ai and ea: to the great increase of our labour, confusyon of the letters, in depriving them of their right powers, and uncertainte to the reader. [In this book Hart proposes either the circumflex or reduplication as the mark of quantity]. For the voel e, doeth of voice import so moche in better and ever and in mani other wordes and sillables, as we doo communely use to pronounce the diphthongs ey or ei, ai, or ay, or the ea, except yt be when they are separte and fre from diphthong whiche to signifie we ought to use an accent as shalbe said. [He proposes the hyphen.] Then the i, we abuse two ways: the first is in that we geve it a brode sound (contrary to all peoples but the Scotts: as in this sentence, [83] he borrowed a swerd from bi a mans side to save thie life: where we sound the i in bi, side, thie and life as we shuld doo the ei diphthong . . . The other ab-[84]-use of the i, is that we make yt a consonant

This pronunciation cannot have been in all respects the prevalent and received pronunciation of his time, for Hart frequently disagrees with Palsgrave, Salesbury, Smith, and Bullokar, and Dr. Gill

without any diversifyng of his shape from the voell . . . [86] The forth now is the o, whose abuse (for that it cometh onli by leaving the proper use of the u) causeth me to speak upon the u. We abuse [87] the u, two waies the one is in consonant indifferently with bothe his figures u and v . . . [88]. The other abuse of the u, is that we sound yt as the Skottes and French men doo, in theis wordes gud and fust [89]: Whereas most communely we our selves (which the Grekes, Latines, the vulgar Italiens, and Germaines with others doo alwaies) kepe his true sound: as in theis wordes, but, unto, and further. [This thoroughly excludes all suspicion of an (ə) sound.] Yf you marke well his uzurped sound in gud and fust (and others of the Skottish and french abuse) you shal find the sound of the diphthong iu, keping both the i and u, in their proper vertu, both in sound and voel, as afore is said we ought: sounding yt in that voice wherefore we now abuse to write, you." The identification with the French and Scotch sounds ought to imply that that long *u* was (yy), but its identification with you makes it (ju); Hart however, in his orthographie also rises (iu) for both sounds, as in the passage reprobated by Gill, *suprà* p. 122, where he writes you use as (iu iuz); yet if any value is to be attributed to his description of long *u*, *suprà* p. 167, he certainly meant (ju yyz) and it was only his notation which led him into an ambiguity which also deceived Gill. But here it is evident that he had not yet heard the difference between *yew*, *you*, which Sir T. Smith writes (yy, iu), p. 166. This therefore may be a case of education of the ear. He asks now: "What difference find you betwixt the sound of you, and u in gud and fust? Wherefore yf our predecessours have thought it necessari to take three voels for that voice, which in another place [90] they (observing derivations) writ with one, there appeareth to be a confusion and uncertainte of the powers of letters, as they used them. Lett us then receive the perfet meane betwixt theis two doubtfull extremities; and use the diphthong iu alwaies for the sound of

you, and of u in suer, shut & bruer, and souch lyke, writing them thus shiut, siuer, briuer:" does the word *shut shiut* mean *suit* or *shoot*? see *suprà* p. 216, n. 1, "wherefore in our writings, we need carefull to put a sufficient difference, betwixt the u and n: as theis and the printes geve sufficient example. Now see you whether we doo well to writ the o in theis wordes do, to & other (signifying in latine *alius*) when yt ys the proper sound of the u: or for [91] the lyke sound to dooble the o: as in poore, good, root, and souch like of that sound: but I find the same dooble o, writen with reason in some wordes, when yt signifyeth the longer time: as in moost, goost and goo. . . . [95] Then the nombre of our voels is five as the Grekes (concerning voice) the Latines, the Germaines, the Italiens, the Spayneyardes and others have alwaies had, declared in souch their singuler power, as they haue and doe, use them. . . . [96] a diphthong is a ioinyng of two voels in one syllable keping their proper sound, onli somewhat shortening the quantite of the first to the longer quantite of the last (p. 132): which is the onli diversite that a diphthong hath, from two voels commyng together yet serving for two syllables, and therefore ought to be marked with the figure *διαιρεσις*, as shalbe said." Among the diphthongs he places first *y* considered as Greek *υ*, and recommends its disuse, and then *w* considered as *uu*, for which he would write *u*. [101] "Wherefore we take the usingle to have so moch power as the w: for this figure u, shall not (or ought not) henceforth be abused in consonant, nor in the skottish and french sound. Then may we well writ for when, writ and what, thus huen, urit and huat: and so if their lyke, cleane forsaking the w. Now the ea, so often as I see yt abused in diphthong, it is for the sound of the long e: wherin is the necesite spoken of, for the use of a mark, for the accident of longer time (as hereafter shalbe said) for that the sound e length-[102]-ned wil serve for the commune abused diphthongs ea, ai or ay and ei or ey (p. 122): the powers of which voels we now myx together con-

especially reprobates his pronunciation in many particulars (p. 122). Still we can hardly refuse to believe that Hart tried to exhibit that pronunciation of which he himself made use, and which he conceived to be that which others either did or should employ. Moreover his work contains the earliest connected specimen of phonetic English writing which I have met with, as Palsgrave, Salesbury, and Smith only gave isolated words or phrases. Although Hart's book has been reproduced by Mr. Isaac Pitman, the ordinary spelling in phonetic shorthand, and the phonetic portion in facsimile writing (with tolerable but not perfect accuracy), yet as many persons would be unable to read the shorthand, and would not therefore obtain a proper knowledge of the meaning of the other portion, and as it is desirable, also, to reduce all these phonetic accounts of English spelling to the one standard of palaeotype for the purposes of comparison, I have thought it best to annex the whole of the last Chapter of Hart's book, according to my own interpretation. This Chapter gives Hart's notions of contemporary French pronunciation, a subject which has been already so much alluded to in Chap. III., that the remainder of this section will be devoted to it. Hart does not admit of (w, j) but uses (u, i) for them, even in such words as *which*, *write*, which he exhibits as (huitsh, ureit). I have elsewhere restored the (w, j) which were certainly pronounced, but in this transliteration it seemed best to follow him exactly in the

fuzibli making the sound of the same long e, and not of any parfait diphthong: as in theis examples of the ea in feare which we pronounce sounding no part of the a. And for the ai or ay, as in this word faire pronouncing nether the a, or i, or y: also yn saieith where we abuse a thriphthong. Also ei or ey we pronounce not in theis wordes theine and theym, and souch lyke: where we sound the e long as in all the others. Now for the ee, we abuse in the sound of [103] the i long: as in this sentence, Take heed the birdes doo not feed on our seed: also for the ie in thief and priest: in likewise for the eo, as in people, we onli sound the i long. We also abuse the eo in the sound of the u voel as in ieoperdi, which we pronounce iuperdie. The oo we have abused as afore is said Now lett us understand how part of this foresaid and others shall serve us, and doo [104] us great pleasure: even as roules necessari for us hykely to contrefait the image of our pronunciation. First the au is rightly used (p. 144), as in paul and lau, but not law. Then the ua, is wel used in uarre, for warre: and in huat for what. Further the ei, is wel and properli used in bei for by: in leif, for lyfe: and in seid, for syde

(p. 113). Also eu, we use properli in feu for few: in deu, for dew, and souch lyke (p. 138). The ue, as in question: in huen, for when: in uel, for well. Also the iu as in triuth, for trueth: in rebiuk, for rebuke: and in riule for rule. And the ui alone for our [106] false sounding of we: and as in huich for which: wittness for wittnesse, and souch like: [this he identifies with Greek ui] . . . [106] writ for young, yoke and beyond, iong, ioke, and beyond. Then the oi is wel used in appoint, enjoi, poison, and a hoi barke, [here there is a difference from his later orthography (huei) (p. 132)]. And not to be over tedious, we use aright this diphthong ou in house, out, our and about (p. 152): wherein we may perceive how we have kept the auncient power of the u: the same diphthong ou, being sounded farre otherwise then in bloud, souch and should, as some ignorantli writ them, when we pronounce but the u, in hyr proper sound." This use of *ou* for (*u*) is frequent in this MS. *souch*, *toung*, *mouch*, being common forms. The above extracts seem to possess sufficient interest to admit of reproduction, but the work itself is entirely superseded by the later edition.

use of (u, i). Hart also systematically employs (iu) for long *u*, but, as I have already pointed out (p. 167) and as will appear in the course of this example, he meant the French *u*=(yy), and I have therefore restored that orthography, to prevent ambiguity. Where however *iu* clearly meant (ju, i, u), the latter forms are used. Hart does not mark the place of the accent, but uses an acute accent over a vowel occasionally to mark that it was followed by a doubled consonant in the old orthography.¹ This acute accent is retained, but the position of the accent is marked conjecturally as usual. Hart uses a dash preceding a word to indicate capitals, thus /italian; I give the indicated capital. His diæresis is represented by (,) as usual. There are, no doubt, many errors in the marking of long vowels, which were indicated by underdotting, but I have left the quantity as I found it. The (s, z) are also left in Hart's confused state. As I can find no reason for supposing short *i* to have been (i) in Hart, although I believe that that was his real pronunciation, I employ (i) throughout. The frequent foreign words, and all others in the usual spelling, are printed in *italics*. The foreign words serve partly to fix the value of Hart's symbols.

¹ As the pronunciation of Italian has been often referred to, and as H. I. H. Prince Louis Lucien Bonaparte has lately given me his views upon some points of interest in Italian pronunciation, it seems convenient to make a note of them in this place. The medial quantity of Italian vowels has already been noticed (p. 518 and n. 1). The vowel *e* has two sounds (*e*) close and (*ε*) open, the intermediate (*e*) being unknown, whereas it is the only *e* in Spanish. The vowel *o* has also two sounds, which have in this work been hitherto assumed as (*o*) close and (*o*) open. The prince does not allow this; to him (*o*) is Swedish *o* long, and (*o*) is Spanish *o*. His Italian close *o* does not differ from (*o*), and his open *o* is (*o*) or (*Λ*), probably the former. His theory is that when a language has only one *e*, *o*, as in Spanish and modern Greek (suprà p. 523, l. 6

from bottom), Welch, and therefore in Latin and early English, it is (*e*, *o*); when it has two *e*, and two *o*, they are (*e*, *ε*) and (*o*, *o*) respectively. Again in the pronunciation of the consonants in Italian, the Prince distinguishes, an emphatic and a weak utterance. The former is usually written double, but, he insists, is not pronounced double, in the sense of p. 55, but only emphatic, as if preceded by the sign (·) p. 10,—which has been wrongly used (pp. 4, 9) in the combinations (*t*, *d*) in place of (*tt*, *dd*), or “outer” (*t*, *d*). The following are the rules he lays down in his Sardo Sassarese example (suprà p. 756, n. 2, col. 2), which it is best to give in his own words (ib. p. xxxv). “Si dice spesso, poichè le consonanti scempie si pronunziano, tanto in italiano quanto in sassarese, come se fossero scritte doppie, in forza delle seguenti regole generali:

For dhe *hih* dutsh dhe sound aul dheer *vo', elz* in dhe veri saam sort: and nev'er maak dhe *i*, kon'sonant, nor abyzz' dhe *g*, befoor dhe *e*, and *i*, az dh- Italian duth, but kiip it aul'uez befoor' dhem, az

1) Allorchè, essendo iniziali, vengono in principio di frase, sia al cominciar di un periodo o di una clausula benchè breve, sia dopo una virgola. 2) Allorchè, cominciando la sillaba, sono precedute da altra consonante. 3) Allorchè occorrono in fin di voce, come ne' monosillabi *il, del, &c.* 4) Quando la voce precedente, benchè terminata in vocale, sia un ossitono oppure un monosillabo derivato da voce latina terminata in consonante, la qual consonante poi venne soppressa nel farsi italiana o sassarese detta voce latina. Così la preposizione *a* derivata dalla latina *ad*, la congiunzione *e* corrispondente ad *et*, il *si* derivato dal *sic*, il "nè" *nec*, le parola tronche come "amò" *amavit*, "potè" *potuit* hanno tutte la proprietà di dar pronunzia forte alla consonante iniziale della voce seguente; ed avvegnachè si vegga scritto: *a Pietro, e voi, si grande, nè questo nè quello, amò molto, potè poco*, non si ode altrimenti che: *appietro, evvoi, siggrande necquesto necquello, amomolto, poteppoco*. Il suono debole delle consonanti, all' incontro, avrà luogo quando la voce che le precede si termina in vocale, eccettuati i casi notati nelle regole che precedono. Così in: *di Maria, i doni, la mente, le donne, mi dice, ti lascia, si gode, ama molto potè poco, molto largo*, le consonanti iniziali della seconda voce si pronunziano deboli quali si veggono scritte, per essere le parole latine corrispondenti alla prima voce: *de, illi, illa, illa, me, te, se, potui* terminate in vocale, oppure perchè, come in *ama molto e molto largo*, le voci *ama* e *molto* non ricevono l'accento tonico in sull' ultima sillaba." Compare the double Spanish sound of *r*, *suprà* p. 198, n. 2. This emphatic pronunciation, in the case of (*p b, t d, k g*) consists in a firmer contact and consequently a more explosive utterance of the following vowel; in the case of (*f, v, s*) &c., in a closer approximation of the organs and a sharper hiss or buzz. But in Sardo Sassarese, the weak pronunciation generates new sounds, weak (*p, t, k, v*) becoming (*b, d, g, bh*). The Prince was also very particular respecting the pronunciation *c, g, z* in *ce, gia,*

sio, zero, which have been assumed in this work to be (*tsh, dzh, ts, dz*) respectively, forming true consonantal diphthongs, the initial (*t, d*) having an initial effect only (*suprà* p. 54, l. 20). The Prince considers them all to be simple sounds, capable of prolongation and doubling, and he certainly so pronounced them. Sir T. Smith, and Hart both used simple signs for (*tsh, dzh*), Gill used a simple sign for (*dzh*) but analyzed it into (*dʒ*). Hart, however, seems to have considered (*tsh*) as simple, but his words are not clear. The effect of the simple sound used by the Prince, was that of (*t*sh, d*zh, t*s, d*z*), that is an attempt to make both pairs of effects at once. This results in a closer and more forward contact, nearly (*sh f, zh f, st, z f*) but the (*t*s, d*z*) did not resemble (*th, dh*). This effect may be conveniently written (*ʃsh, ʒzh, ʃs, ʒs*). The effect of (*ʃsh, ʒzh*) on English ears is ambiguous. At one time it sounds (*sh, zh*) and at another (*tsh, dzh*), with a decided initial (*t, d*) contact as we pronounce in English, and the Prince again hears my (*tsh, dzh*) as his (*ʃsh, ʒzh*). It would almost seem that (*ʃsh, ʒzh*) were the true intermediate sounds between (*kj, gj*) and (*tsh, dzh*). But a Picard variety of (*kj, gj*) which may for distinctness be written (*kj, gj*) is a still more unstable sound to foreign ears. In precisely the same way (*k*s, k*sh*) may be produced, the tongue being more retracted and the tongue closer to the palate than for (*s, sh*). In the Sardo Tempiese dialect (*k*sh*) occurs and is written *ke*. These sounds may be written (*ʃs, ʒsh*) in imitation of (*ʃs, ʒsh*). Was the Attic initial *ξ*, replacing *σ*, really (*ʃs*), and the original Sanscrit *क्ष* (*ʃsh*)? The double contact of tongue and lips, which probably occurs in African dialects may be (*ʃp, ʒp*), as slightly different from (*kw, tw*). The sibilants may now be greatly multiplied. The prince pronounced the following: (*s z, sh zh; sj zj, shj zhj; ʃs ʒs, ʃsh ʒsh; ʃsj ʒsj, ʃshj ʒshj*) all as simple sounds. Emphatic pronunciation, simultaneous pronunciation, and successive pronunciation still require much consideration and practical

observation of existing usages. The difficulty in separating the usual speech habits of the listener and speaker, and of not assuming the first to be a correct account of the second, is more and more felt as the knowledge of the phonetic process increases. We have as yet necessarily given an undue amount of consideration to analysis, in order to ascertain the elements of speech, to the neglect of the important study of synthesis, whence alone can result the proper conception of national speech with its whole array of *legato*, *staccato*, phonetic assimilation, phonetic disruption, stress, intonation, quantity, emphasis of letter, syllable, word, of the

utmost importance to comparative philologist, and almost totally unknown to comparative philologists.

denies that (*v*, *dh*, *z*) occur in Spanish, but admits (*f*, *th*, *s*), as sounds of *f*, *z*, (or *c* before *e*, *i*), and *s*. This pronunciation of *c*, *s* is doubtful. It may be (*st*), and certainly by some *d* is pronounced either (*dh*) or (*z*), especially when final. In the common termination *-ado*, the *d* is often quite lost, but the vowels are kept distinct in two syllables, and do not form a diphthong. In the termination *-ido*, the *d* is never lost. The (*s*) sound of *c*, *z*, is not acknowledged in Madrid. The letters *ó*, *v* are pro-

nounced alike and as (*bh*). The *j* is by some said to be a peculiar guttural, but the Prince identifies it with (*kh*). *Ll*, *ñ* are (*lj*, *nj*). Hart confuses *ll* with Welsh *ll*, as does Salesbury, (suprà p. 757), but Hart also confuses the sound with (*l*), or *le* in *able* (suprà p. 195); which he probably called (*aa'blh*) as in French (suprà p. 52). There seems to be no foundation for supposing that Spanish *u* was ever (*y*), as stated by Hart.

ALEXANDER BARCLEY'S FRENCH PRONUNCIATION, 1521.

In the introductory *Authours Epistell to the Kynges Grace*, prefixed to Palsgrave's *Esclaircisement*, he says: "Onely of this thyng, puttyng your highnesse in remembraunce, that where as besydes the great nombre of clerkes, whiche before season of this mater haue written nowe sithe the beginnyng of your most fortunate and most prosperous raigne," that is, between 22 April 1509 and 18 July 1530, "the right vertuous and excellent prince Thomas late Duke of Northfolke, hath commanded the studious clerke¹ Alexandre

¹ Further on he is not so complimentary, as he remarks: "Where as there is a boke, that goeth about in this realme, intituled the Introductory to writte and pronounce frenche, compiled by Alexander Barcley, in whiche k is moche vsed, and many other thynges also by hym affirmed, contrary to my sayenges in this boke, and specially in my seconde, where I shall assaye to expresse the declinations and coniugatynges: with the other congruites observed in the frenche tonge, I suppose it sufficient to warne the lernar, that I haue red ouer that boke at length:

and what myn opinion is therin, it shall well inough apere in my bokes selfe, though I make therof no further expresse mencion: saue that I haue sene an olde boke written in parchement in maner in all thynges like to his sayd Introductory: whiche, by coniecture, was nat vnwritten this hundred yeres. I wot nat if he happened to fortune upon suche an other: for whan it was commaunded that the grammar maisters shulde teche to youth of Englande ioyntly latin with frenche, there were diuerse suche bokes diuysed: wher-vpon, as I suppose began one great

Barkelay, to embusy hym selfe about this excercyse, and that my sayd synguler good lorde Charles duke of Suffolke, by cause that my poore labours required a longre tracte of tyme, hath also in the meane season encouraged maister Petrus Uallensys, scole maister to his excellent yong sonne the Erle of Lyncolne, to shewe his lernynge and opinion in this behalfe, and that the synguler clerke, maister Gyles Dewes somtyme instructour to your noble grace in this selfe tong, at the especiall instaunce and request of dyuers of your highe estates and noble men, hath also for his partye written in this matter." For the last treatise, see *suprà* p. 31. The second I have not seen.¹ A copy of the first, which is extremely rare and does not seem to have been known to A. Didot, 'as it is not found in his catalogue, (see p. 589, n. 1), exists in the Douce Collection at Oxford (B 507) and the following are all the parts in it relating to French pronunciation, according to the transcription of Mr. G. Parker, of Oxford, who has also collated the proof with the original. The whole is in black letter; size of the paper 10½ in. × 7 in., of the printed text 8½ in. × 5½ in.; 32 pages, neither folioed nor paged, the register at bottom of recto folio is: A 1-6, B 1-6, C 1-4. In this reprint the pages are counted and referred to, as in the editions of Salesbury. The pages are indicated by thick numbers in brackets. Remarks are also inserted in brackets. The / point is represented by a comma. Contractions are extended in italics.

The copy he refers to belonged to Mr. Reed of Staple's Inn, then to the Marquis of Blandford (*Catalogus librorum qui in Bibliothecâ Blandfordiensi reperiuntur*, 1812, fasc. 2, p. 8) and was sold by auction at Evans's sale of White Knights Library 1819, to Rodd the bookseller, for 9*l.* 15*s.*, after which I have not been able to trace it, but Mr. Bradshaw says it is only a reprint of a work of Caxton's (*The Book of Travelers*, Dibbins Ames, 1, 315, 316), containing French phrases, but no information on pronunciation. A mutilated copy of Caxton's book is in the Douce Collection.

¶ Also whan these wordes. nous. vous. and ilz, be set before verbes begynnyng with ony consonant, than amonge comon people of fraunce the ,s, and ,z, at ende of the sayd wordes, nous. vous. and ilz, leseth the sounde in pronouncynge though they be wryten. But whan they are ioyned with verbes begynnyng with ony vowell than the .s. and .z. kepeth theyr full sounds in pronouncynge.

[5-8] [On Verbs. At p. 8, l. 21, we read]

Here after foloweth a smal treatyse or introductory of ortograpy or true wrytynge, wherby the dyligent reder may be infourmed truly, and perfytely to wryte and pronounce the frenche tunge after the dyuers customes of many countrees of fraunce. For lykewyse as our englysshe tunge is dyuersly spoken and varyeth in certayne countrees and shyres of Englande, so in many countrees of fraunce varyeth theyr langage as by this treatyse evidently shall appere to the reder.

¶ First how the. lettres of the A. b. c. are pronounced or sounded in frenche.

¶ Lettres in the. A. b. c. be. xxii. whiche in frenche ought thus to be sounded.

a b c d e f g h i k l m n o p q
A boy¹ coy doy e af goy asshe ü² ka el am an oo poy cu
r s t v x y z & parle 9 parse.
aar ees toy v yeux ygreois zedes et parlui. 9 parlui. or, parsoy.

¶ And albeit that this lettre .h. be put amonge the lettres of the alphabete, yet it is no lettre, but a note of asperacyon, or token of sharpe pronouncynge of a worde.³ Also .&. and .g. are not counted amonge the lettres : and so remayneth. xxii. lettres in the alphabete besyde .h. and .g. as sayd is.

¹ Compare Palsgrave's Introduction to his second Book : "In the namyng of the sayd consonantes the frenche-men diffre from the latin tong, for where as the latines in soundynge of the mutes begyn with the letters selfe and ende in E, sayng BE, CE, DE, &c. the frenche men in the stede of E sound Oy and name them Boy, Coy, Doy," etc. Hence the oy in these words was not (ee) as it has now become. Palsgrave adds : "and where as the latines in soundynge of theyr liquides or semi vowelles begyn with E, and ende with them, saynge El, Em, En, the frencho men double the liquide or semi vocale, and adde also an other E and namo them Elle, Emme, Enne, geuyng the accent upon the fyrst E, and at the last

E depressyng theyr voyce." This is different from Barcley.

² This must surely be a misprint. The dots are faint. The vowel *u* does not occur in this alphabet.

³ This explanation of aspiration, renders the real sound of *h* doubtful ; as to whether it was (x) or (,) as at present. The following quotations from a French newspaper, contained in the *Daily News*, 14 Sept. 1869, illustrates this modern use. "L'H est-il aspiré dans Hugo ? Faut-il dire Victo Rugo ou Victor Ugo ? Il me semble, moi, que l'aspiration serait plus respectueuse." Observe that no *h* is written in either case, but that the running on of the R, or the hiatus before U alone mark the absence and

¶ These sayd: xxii. lettres be denyded all into vowels and consonantes .v. of them be called vowels, whiche be these. a. e. i. o. u. these fyue be called vowels for eche of them by themself ioyned with none other lettre maketh a full and perfect worde. Y. is a greke vowel and is not wryten in latyn wordes, but in greke wordes.

[9] ¶ And wordes of other langages without one of these vowels: no lyttral voyce may be pronounced¹ of these .v. vowels .ii. leseth theyr strength somtyme: and become consonantis whiche .ii. be these. I. and v. whiche ar consonantis whan they are put in the begynnynge of a syllable ioyned with another vowel and syllablyd or spellid with the same, as in these wordes in frenche Iouer to play vanter, to boste: and so in other lyke.²

¶ The other .xvi. letters called be consonantis: for they be soundyd with the vowels and make no syllable nor worde by them selfe excepte they be ioyned with some vowel. consonantis be these. b. c. d. f. g. k. l. m. n. p. q. r. s. t. x. z.

¶ These consonantis be deuydyd agayne into mutes liquides and semy vowels of whom nedyth not to speke for our purpose. A dyptonge is a ioynynge to gyther of .ii. vowels keypyng eche of them his strength³ in one self syllable: of them be .iiii., that is to say, au, eu, ei,⁴ oy. In latyn tunge, au, and eu be bothe wryten and sounded⁵ ay, and oy, be wryten but not sounded. but in frenche and englysshe tunge bothe ay oy au and eu be wryten and sounded,⁶ as in these examples in frenche of au. voyce vng beau filz, here is a fayre sone. of eu, deux homes font plus que vng: two men dooth more than one. of ay, ie ne diray point ma pencee a toutz gentz. I shall not tell my thought to all folkes. Of oy as, toy meimes ma fait le le tort. thy self hast none me the wronge. That the same dyptonges be both wryten and sounded in englysshe it appereth by the examples. As a maw, strawe, tawe, dewe, sewe, fewe. fray, say, may, pay. noy, boy, toy, ioy. And thus haue we more lyberte bothe in frenche and englysshe in

presence of aspiration. And this may have been Barclay's meaning. But see infra p. 809, l. 4.

¹ The pointing is evidently wrong. There should be a period here, and the colon after "vowels" seems incorrect. The expression "lyttral voyce" is, even then, rather obscure.

² Compare Salesbury's explanation of the consonantal value of *i*, *u*, supra p. 754.

³ This ought to mean that the sound of each is heard, and ought to distinguish real diphthongs from digraphs. But the author so little understands the nature of speech that he may merely mean that the two letters being juxtaposed modify each others signification, producing a tertium quid. The Lambeth fragment (supra p. 226, n. 1), gives 3 syllables to *aider*, *aucun*, 5 to

meilleur, 4 to *eureux*, which would all agree with a real diphthongal pronunciation, but then it proceeds to give 3 syllables to *ouir*, in which there can be no doubt that *ou* was a digraph.

⁴ The omission of *ai* is very remarkable. But from what follows it can hardly be doubted that *ai* was included under *ei*, or that *ei* was a misprint for *ai*.

⁵ This ought to imply that Latin *au*, *eu*, were then called (au, eu), and this would agree with other indications of English contemporary pronunciation.

⁶ As we know from Salesbury that about 30 years later English *ay*, *oy*, *au*, were called (ai, oi, au) at least in some cases, these words ought to imply that they had the same sound in French. This would agree at any rate with Palsgrave.

wrytynge and soundynge than in latyn as touchynge the .iiii. dyptonges.

¶ Also here is to be noted that of lettres we make syllabes: of syllabes we frame wordes, *and* of wordes we combyne reasons, and by reasons all scyences and speches be vttered. thus resteth the grounde of all scyences in lettres, syllabes, wordes, and reasons. Wherefore (as of the fyrst foundacyon of frenche tunge *and* also of al other langages) fyrst I intende by the ayde *and* socour of the holy goost to treate how the lettres be wryten *and* sounded in frenche.

¶ Of the soundynge of this lettre .A. in frenche.

This lettre .A. in frenche somtyme is put onely for a lettre. And somtyme it is put for this englysshe worde. hath. Whan it is put but for a lettre it is often sounded as this lettre e. as in this frenche worde, *st aucs*¹ *vous*: in englysshe, can ye. In whiche worde *and* many other as, *barbe*, and *rayre*. *with* other lyke this lettre. A. hath his sounde of this lettre .e. But in some countrees .A. is sounded with full sounde in lyke maner as it is wryten as, *rayre*, *and* *suche* other whan this lettre .A. is put for a worde it betokeneth as moche in englysshe as this worde .hath. But some frenche men than adnex .d. withall as, *ad*. as *il ad*, he hath. But *suche* maner of wrytynge is false. for this lettre. d. is not sounded nor pronounced in frenche, nor founde often wryten in the ende of ony worde. And though some wolde say in these frenche wordes, *viande*, *meate*. *demande*, *enquyre* or *aske*. and *that* .d. is sounded in ende of the worde, it is not so. for in these wordes *and* other lyke, *suche* as truly pronounce frenche resteth the sounde on the last letter of the worde whiche is .e.² and not .d.

[10] ¶ Also in true frenche these wordes, *auray*, I shal haue. *and*, *auroy*, I had: be wryten *without* e in myddes of the worde, *and* in lykewyse be they sounded *without*, e but in certayne countrees of fraunce in *suche* maner of wordes this lettre e is sounded *and* wryten in the myddes as thus, *aueroi*, *aueroie*: whiche is contrary bothe in the true wrytynge, *and* also to the true pronuncyacion of perfyte frenche.³

¶ How this lettre b ought to be wryten *and* sounded in frenche thempour for the emperoure, and so of other lyke.

¶ Also this worde *auue* may be wryten in dyuers maners after the custome *and* vsage of dyuers countrees of fraunce as thus. *auueques*: *auueque*. And some *without* reason or ortography wryte it *with* .s. in the myddes as *auueque*. but how so euer *auueque* be wryten in frenche it soundeth as moche in englysshe as this *preposycyon* with. And also this worde *solonc* may be wryten *with* c, or els *without* c

¹ The words *st aues vous* are not clear. The use of *a* in the sound *e* seems to be dialectic in *barbe*, see the quotation from Chevallet, p. 75, at bottom. But in *rayre*, (which ought not to be *rare*, but the book is so full of errors that it may be,) to scrape or shave, the remark seems to imply *ay* = (ee).

² Implying, of course, that the final *e*, now mute, was then audible, but only faintly audible, or else the error which he combats, could not have arisen.

³ In this case probably *u* preserved its consonantal power, the remnant of the Latin *o*.

at *the* ende as solonc or solon, but than o ought not to be sounde, yf a consonant immediatly folowe.

[Then follow the headings, Of Nombres, in one paragraph, and Of Gendres, in four paragraphs, the last of which is:]

¶ Many mo rules be concernynge wrytynge and spekyng of frenche, which were to longe to expres in this small treatyse: but the moste perfytenes of this langage is had by custome and vse of redyng and spekyng by often enquiryng: and frequentynge of company of frenchemen and of suche as haue perfytenes: in spekyng the sayd langage.

[11] [Treatyse of dyuerse frenche wordes after order of the Alphabete .A. B., and then on l. 8 from bottom the author proceedes thus]

¶ This lettre. B. set in the myddes of a frenche worde ought to be soundyd in maner as it is wryten, as *debriser*. to bruse, troubler. to trouble, but in these wordes folowynge .b. is wryten in the myddes *and* not soundyd as, *debte*. dette, *endebrter*. desoubz. *vnder-neth*, desubz. *aboue*, coubte. a ribbe, vng subget. Also these verbes doubter. to dout, *tresdoubter*. greatly to dout, *substiner* with all theyr modes *and* tensys as well synguler as plurell with all nownes *and* particyples descendynge of them, must haue .b. wryten in the myddes of them and not soundyd, as wryten *doubte* *tresdoubte*. and soundyd *doute*, and *tresdoute*.

[12] Of. C. ¶ This letter .C. wryten in myddes of a worde hathe somtyme the sounde of this letter .s. or .z. as these wordes. *ca*. on this half. *pieca*. a whyle agone. *rancon* a ranson. *francois*. frenche. and in many other lyke wordes whiche soundyth thus with .s. *sa* *piesa* ranson *francois*. Also this letter .c. somtyme hath *the* sounde of .k. as in these wordes in frenche *crou*. cru. *cause*, and *car*. Also these wordes *done* and *ioue* are wryten with .c. in the ende in synguler nombre, but in *the* plurell number the .c. in them is tournyd in to .x. as *doux* *ioux*.

Of. E. ¶ E. for the moste parte is soundyd almost lyke .a.¹ and that namely in *the* ende of a worde. as in this example. *A mon premier commencement soit dieu le pere omnipotent*. At my fyrste begynnyng be god the father almyghty. Il a vng bon entendement. these wordes commencement omnipotent entendement vent with other lyke. be soundyd with a. as *commencement*. omnipotent. *antandement* vant and other lyke. and all suche wordes must haue a short and sharpe attent or pronounciacion at the ende.

¶ And here is to be notyd *that* al maner nownes of the masculine gender endynge in the synguler number in .c. g. or .f. as *blanc*. whyt. *vyf*. quicke. *long*. longe. shall be wryten in the plurell nombre with .s. *hauynge* .c. g. or .f. put away from them. as *blans*. vis. *lons*.

Of. G. ¶ Whan this letter .g. is wryten in frenche in myddes of

¹ Though expressed generally, this remark evidently refers exclusively to the syllable *en* where it is now pronounced (aa), which we have seen

Hart also pronounced (an), *suprà* p. 802. See also *infra* in this § for all the French nasals during the xvth century.

a worde bytwene a vowell and a consonant, than shal it be soundyd lyke .n. and .g. As compaignon, compaigne. How be it some wryte suche wordes as they muste be soundyd with .g. and .n.¹ as compaignon. a felawe. compaigne. a company.

Of. H. ¶ H. is no letter but a tokyn of asperacion or sharpyng of a worde, as in these wordes, hors. out, dehors. without, hors. shame, haut. hye, and in other lyke in whiche wordes and lyke .h. is sounded. other wordes be in whiche. h. is wryten and not soundyd as heure. an heure, helas. alas, homme. a man, with other lyke.

Of. I & E. ¶ I. and. E. or any other two vowels ioyned togyder in myddes or in the ende of a worde. whan they are put bytwene two consonants, or bytwene a vowell and a consonant. than eyther of them shall haue his founde as in these wordes biens. goodes, reins. no thyng, Ioie. Ioy, voie. a way, And suche lyke wordes. yet some holde oppynyon that in these wordes, and in suche other .I. or E shall not be soundyd.

¶ Also in true frenche these wordes. Ie. ce, are. wryten without o. in theyr ende but in pycard, or gascoygne, they are wryten with o. at the ende, as thus ieo ceo

Of. K. ¶ This letter .K. in dyuerses speches is put for. ch. As kinal. kien. vak. but in true frenche it is not, but these wordes and suche lyke be wryten with ch. as cheual. a hors, chien. a dogge, vache. a cowe, Also in certaynes countres of Fraunce for c. is wryten ch. as piecha. for a pieca, a whyle ago, tresdoulche for tresdoulce. ryght swete. And so of other lyke.²

[13] ¶ In lykewyse in some countrees of Fraunce names of dygnyte and offyce whiche are the synguler nombre are wryten naturrell with, s, at the ende, as luy papes de Rome, luy roys de france, luy sains esperis: but in true frenche these names be wryten without, s. as le pape de rome, the pope of rome. le roy de france, the kynge of fraunce. le saint esperit, the holy goost. and so of lyke.

Of. L. ¶ This lettre .L. set in myddes of a worde immediatly before a vowell shall kepe his full sounde, as nouvellement, newly. annelement, yerely. continuelement continually parlant, spekyng. egallement, egally. But yf a consonant folowe. I immediatly than ,l, shall be sounded as ,u, as loyalment, principalment, whiche are sounded thus. loyaument, faythfully. principaument, pryncipally.³ Except this worde ,ilz. in whiche worde ,l, and ,z, hath no sounde somtyme. as ilz vont ensemble, they go togyder. and somtyme ,l, hath his sounde and ,z, leseth the sounde whan ,ilz, cometh before a worde begynnynge with a vowell, as ilz ont fait: they haue done.

¹ The reversal of the order in the description of the pronunciation may be accidental. This loose writing, however, gives no reason to suppose that the sound of this *gn* was either (ng) or (gn).

² These remarks must refer to provincial pronunciations, and indicate an

interchange of (k, sh) in French answering to that of (k, tsh) in English.

³ The general observation evidently refers to the particular case, *al* pronounced as *au*, but whether as (au) or (oo) cannot be deduced from such loose writing.

Whan ,l, is wryten in the ende of a worde, and that the worde folowyng begyn with a consonant than shall .l. in suche wordes lese his owne sounde and be sounded lyke an .u. as ladmiral dengleterre, the admyrall of englande, but yf *the* worde folowyng ,l, begyn with a vowell than ,l, shall kepe his owne sounde: as nul home, no man. nul aultre, none other, nul vsage, no vsage. Also ,l, put in the ende of a worde of one syllable shal haue no sounde at all as il sen est ale, he is gone. ie le veul bien, I wyll it well. In suche wordes il and veul, and other lyke ,l, leseth his sounde .ll. double in myddes of a worde must be sounded with hole *and* full voyce.¹ as fille, a daughter. fillette, a lytell mayde. oraille, an eere. and so other lyke.

Of. N. ¶ This lettre. N. put betwene a vowell and a consonant in ende of ony worde whiche is a verbe of *the* thyrd persone plurell, and the indycatyf, or optatyf mode what tens so euer it be, it shall not be sounded in true pronouncynge of frenche, as ilz aymet, they loue. ilz lisent, they rede. whiche wordes and all other lyke must be sounded thus without ,n. ilz aymet. ilz liset. ¶ Out of this rule be excepte verbes of one syllable in whiche ,n, must haue the sounde. as ilz vont, they go: ilz ont, they haue: ilz sont, they are: ilz font, they make, *with* all theyr modes: tens: and compoun-des. in whiche, n shall kepe his ryght sounde.

Of. P. ¶ Whan .P. is wryten in the ende of a worde in frenche, and *the* next worde immedyatly folowyng begynnyng with a consonant than shall it lese the sounde, as thus. il a trop grant auoir, he hath to grete goodes. il vient trop tard, he cometh to late. trop hault, to hye. trop bas, to lowe. in whiche worde trop ,p, hath not his sounde, but it must be sounded thus. tro hault. tro bas. tro tard.

¶ Of this rule be except propre names endynge in ,p. in whiche ,p, must haue his full sounde, as, philip. But yf a worde ende in ,p, and the worde nexte folowyng begyn with a vowell than ,p, shall haue his full sounde. as miculx vault assez *que* trop auoir, better is ynough than to haue to moche. Also these wordes sepmaine, a weke. temps. tyme. corps, a body. and this verbe escrire, to wryte, with [14] all nownes and participles commynge therof, indifferently may be wryten with p. or without p. but though p. be wryten in them it shall nat be soundyd: as semaine, tems, cors escrire.

Of. Q. ¶ Q. in pronounsynge muste haue a softe and lyght sounde,² And it shall nat be wryten in any frenche worde, without two vowels, immedyatly folowyng: of whiche two vowels the fyrste shalbe u. as qui que, *the* whiche, quar, for. querir, to seke, quant, whan, and suche other, but some be whiche wryte q. in suche wordes without this vowell .u. folowyng as qi. qe. &c. whiche maner of wrytyng is vnsemely: And also it is contrary to all rules of ortography or true wrytyng aswell in frenche, as in

¹ The *mouillé* sound of *l* in French (lj) is certainly very badly expressed by these meaningless words.

² The writer probably only means that it is to be (k) and not (kw).

other langages and no reason haue they whiche wryte suche wordes without u. to assyst them saue theyr vnresonable vse agaynst all rules, and good custome. More ouer these wordes quar, qucir, quant. &c. maye be wryten indifferently: with, q. k. or c, as quar, or car, or els kar. &c.

Of. R. ¶ This letter. R. put in the ende of a worde shall kepe his owne full sounde, as *cueur*, as thus *Iay grant mal au cueur*, I haue graet dyscase at my herte: *Ic vous prie pour me consaillir*, I pray you counsell me: but in some countres .r. is soundyd, as this letter, z. as *compere*, a gossyp, is somtyme soundyd thus *compez*,¹ and so of other wordes endyng in this letter. R.

Of. s. syngle. ¶ A syngle .s. in myddes of a worde ought nat to be soundyd if a consonant folowe immedyatly: as *tresdoulce*, ryght swete: *tresnoble*, ryght noble: *tresgracious*, ryght gracyous: but .s. in myddes of these wordes folowyng hath his full sounde: as thus: *prosperite*, *chestien*, *substance*, *esperance*, *meschant*, *Instituer*, *eschairuir*, *transglouter*, *Augustynes*, *Inspirer*, *descharger*, *estaincher*, *estandre*, *peschies*, *constrayndre*, *despenser*, *escuser*, with al nownes, and aduerbes commynge of them. In whiche .s. must be soundyd, if² a consonant immedyatly folowe .s. But if a vowel folowe this letter. s. in the myddes of a worde and no letter betwene .s. and the vowel, than shall .s. haue his full sounde, as it is wryten, *tresexcellent*, ryght excellent: *treshault*, ryght hie: *treshonore*, ryght honoured: *treshumble*, ryght humble.

Of double .ss. ¶ Whan this letter .ss. double is wryten in myddes of a worde it must alway be soundyd: as *puissant*, myghty with such lyke. More ouer if this letter .s. syngle, be wryten in the ende of a worde, whiche is a pronowne coniunccon verbe or preposicion, if the worde folowyng .s. begyn with a consonant, than .s. shal nat be soundyd: as *dieu vous sauue*, god saue you. *dieu vous gard*, god kepe you. *voules vous boire*, Wyl ye drynke. *nous sommes beaucoup des gens*, we be moche folke, in which wordes .s. shal nat be soundyd. But whan this letter .s. is wryten in the ende of a worde in frenche and that the next worde folowyng begyn with a vowel than must .s. haue his full sounde. as *Ic vous ayme*, I loue you. *Ic vous emprie*, I pray you. *estes vous icy*, be ye here, and in suche other wordes. But in these wordes folowyng. s. shall haue no sounde, all if the wor[15]de folowyng begyn with a vowel. *vous ditez vray*, ye say trouth. *vous ditez vrayment*, ye say truely. In whiche wordes .s. shall lese his sounde. Also in this worde *dis*, whan it is a nowne of nombre and taken for ten. if there folowe a consonant .s. shall not be soundyd, as to say *dis liures* .x. ii. it muste be soundyd *di. ii.* But this nombre ten in frenche moost vsually is spelled with .x. as *dix*. and not with .s. as *dis*. But whan *diz* is a participle, and betokeneth *asmoche* as sayd than in the same worde .s. or .z. shall kepe his sounde. as *les heures sont ditez* the heures be sayde

exceptions to the rule. See "all if" = although, *infra* p. 812, l. 26.

² Meaning *although*, as these are the

Of. T. ¶ This letter T. put in *the* ende of a worde beyng a verbe of the thirde persone synguler *and* present or preteryt tens of the indicatyf mode if the worde folowyng begyn with a vowell, it shall be soundyd. as est il prest, is he redy. Il estoit alostal, he was at home. But if the worde folowyng begyn with a consonant, than T. shal nat be soundyd. as quest ce quil dist, what is *that* he sayth Il est prest, he is redy. il fust tout esbahy. he was al abasshed. Il ny a que vanite en cest monde There is nought but vanyte in this worlde. Also all nownes *and* participles, whiche ende in the synguler nombre in t, in the plurell nombre muste be wryten with s. or with z. the samet. [=same t] put away from the ende of the word as thus worde, saynt, holy. is wryten in the synguler nombre with t. in the plurell nombre it is thus wryten. as sainz. or sains without. t. but in some places of fraunce they wryte suche wordes in the plurell nombre with t. c. *and* z. or s. at the ende after the moste vsed Ortography of frenche. For amonge frenche men this is a general rule. *that* as ofte as t. is put in mynnes of a worde beyng a nowne of the femynyne gender it shall not be wryten without a vowell immedyatly folowyng. as les saintes vierges du ciel ne cessent de louer dieu, the holy virgyns of heuen cesseth not to laude god. Il ya des femmes que sont bien riches marchandes, there be women whiche be well ryche marchandes. And so may other frenche wordes endyng in tes. be wryten with t. *and* es. or with z. or s. without t. but it accordeth not to reason to wryte these wordes thus saintz toutz marchantz in the plurell nombre. all if they be wryten with t. in the synguler nombre. for in the plurell nombre they ought nat to be wryten with t. for any of these two letters s. or z. in frenche stande for as moche as ts. or tz. But for a conclusion though suche wordes in in certayne countres of Fraunce be wryten with ts. or with tz. in the ende. as thus mon amy sont nous litz faitz, my frende are our beddes made. Beau sir sont mez pourpointz faitz, faire sir be my doublettes made. yet after true ortography of frenche these wordes *and* other suche muste be bothe wryten *and* soundyd without t. as lis fais pourpains ¶ Also these wordes filz, a sone. mieulz better. fois one tyme. assez, ynoughe. vous poues, ye may. vous prenes, ye take, vous enseignes, ye teche. vous lisez, And suche other ought to be wryten without t. but some be whiche wrongly wryte these wordes with t. As filtz, mieultz, foitz, assetz, pouetz, prenetz. &c. whiche wordes in ryght frenche haue no t. neyther in soundyng nor in wrytyng. ¶ Also this coniunccon. betokeneth the same thyng in frenche that it doth in latyn. that is to say, *and*, in englysshe in whiche coniunccon t. is neuer soundyd though it be wryten with et. as et Ie vous fais a scauoir, And I make you to wytte or knowe.

[16] Of. U. ¶ U. Wryten in myddes of a worde shall often haue no sounde, bothe in latyn frenche *and* other lawgages. And that when it is wryten immedyatly after any of these thre letters, that is to say. q. g. or. s. As qui que, language, langue, a tonge. querir, to seke: guerre, warre, *and* suche other. In whiche wordes u. is wryten but not soundyd. Neuertherles in dyuers Countres after

the foresayd letters they sounde w, doubled as quater, quare, quaysy. Englyshe men, and Scottes alway sounde u. after the letters both in Latyn and in theyr Ulgayre or common langage. In lyke wyse do dutche men, and almayns. As quare, quatuor quart, quayre, qwade. and suche lyke.

Of. X. ¶ This letter X. put in thende of a worde. may eyther kepe his owne sounde, or els it may be soundyd as. z. as cheualx, or cheualz. hors, doulx, or doulz. swete mieulx, or mieulz better which wordes may indifferently be wryten with. x. or with z. Also this worde dieulz, ought not to be wryten with x. in *the* ende except it be in the nominatyf, or vocatyfe case. but by cause of ryme somtyme it hath x. in other cases. And whan x. is wryten in suche cases somtyme it is soundyd and somtyme not. As if dieux be wryten in the nominatyf case and a consonant folowe immediatly than x. shal not be soundyd. as dieux vous sauue, god saue you. dieux vous garde, god kepe you. but if this worde dieux be set in the vocatyfe case: than shall x. kepe his sounde. As benoit dieux ais pitie de moy, O blessyd god haue pyte on me.

Of. Y. ¶ This letter y. hath the sounde of this letter I and in many wordes of Frenche it ought to be wryten in stede of I by cause of comelynes of wrytynge. In latyn wordis y. ought not to be wryten, but whan any greke worde is myngled with latyn wordes for curyosite of the wryter or diffyculte of interpretacion in suche greke wordes y. muste be wryten in stede of I. in Englysshe wordes y. is moste commonly wryten in stede of I, soo that the englysshe worde be not deducte of any latyn worde: but specyally y: muste be wryten for I, in *the* ende of englysshe wrodes, and whan n: m, or u, is wryten before, or behynde it.

Of. z. ¶ z. Put in the ende of a worde muste be soundyd lyke s. as querez, seke ye. auez haue ye. lisez, rede ye. And lyke wyse as s. in the ende of a frenche worde is somtyme pronounced, *and* somtyme not, ryght so, z. put in *the* ende of a worde foloweth *the* same rule: somtyme to be soundyd, *and* somtyme not as aperyth in the rule of .s.

¶ Here is also to be noted for a generall rule, that if a worde of one syllabe ende in a vowell, and the worde folowynge begynne also with another vowell, than both these wordes shalbe ioyned to gyther, as one worde:¹ both in wrytynge and soundynge. As dargent: for de argent. ladmiral, for le admiral, whiche rule also is obseruid in englysshe, as thexchetour, for the exchetour: thexperyence, the experyence.

¶ And also here is to be notyd *that* many wordes be which
sounde nere vnto latyn and be vsed in bothe the langages of Frenche
and Englysshe amonge eloquent men, as termes indifferently be-
longynge to both frenche *and* englysshe. So that the same sygny-

them in englysshe,¹ as thus.

PALSGRAVE ON FRENCH PRONUNCIATION, 1530.

In addition to the many quotations from Palsgrave's First Book, scattered through the above pages, the following extracts from the "Breffe Introduction of the authour for the more parfyte understanding of his fyrst and seconde bokes," ought to find a place here :

"The frenche men in theyr pronounciation do cheffy regarde and couet thre thynges. To be armonious in theyr speking. To be breffe and sodayne in soundyng of theyr wordes, auoydyng all maner of harshenesse in theyr pronounciation, and thirdly to gyue euery worde that they abyde and reste vpon, theyr most audible sounde. To be armonious in theyr spekyng, they vse one thyng which none other nation dothe,¹ but onely they, that is to say, they make a maner of modulation inwardly, for they forme certayne of theyr vowellles in theyr brest, and suffre nat the sounde of them to passe out by the mouthe, but to assende from the brest straight up to the palate of the mouth, and so by reflection yssueth the sounde of them by the nose. To be breffe and sodayne, and to auoyde all maner harshenesse, whiche myght happen whan many consonantes

¹ Did Palsgrave know anything of an argument for the recent introduction of Portuguese? If he did, this might be of nasality into Portugal.

come betwene the vowelles, If they all shulde haue theyr distyncte sounde. Most commonly they neuer vse to sounde past one onely consonant betwene two vowelles, though for kepyng of trewe orthographie, they vse to write as many consonantes, as the latine wordes haue, whiche theyr frenche wordes come out of, and for *the* same cause, they gyve somtyme unto theyr consonantes but a sleight and remisshe sounde, and farre more dyuersly pronounce them, than the latines do. To gyue euery worde that they abyde vpon his most audible sound, . . . the frenche men iudgyng a worde to be most parfaytly herde, whan his last end is sounded hyghest, vse generally to gyue theyr accent vpon the last syllable onely, except whan they make modulation inwardly, for than gyueng theyr accent vpon the last syllable saue one, and at *the* last syllable of suche wordes, they sodaynly depresse theyr voyce agayne, forming the vowell in the brest . . .

"Where as I haue sayd that to be the more armonius they make a maner of modulation inwardly, that thyng happeneth in the soundyng of thre of theyr vowelles onely A, E, and O, and that nat vniuersally, but onely so often as they come before M, or N, in one syllable, or whan E, is in the last syllable, the worde nat hauyng his accent vpon hym . . . so that these thre letters M, N, or E, fynall, nat hauyng the accent vpon hym, be the very and onely causes why these thre vowelles A, E, O, be formed in the brest and sounded by the nose. And for so moche as of necessity, to forme the different sounde of those thre vowelles they must nedes at theyr first formyng open theyr mowth more or lesse, yet whan the vowell ones formed in the brest, ascendeth vpwardes and must haue M, or N, sounded with hym, they bryng theyr chawes to getherwardes agayne, and in so doyng they seme to sound an v, and make in maner of A, and O, diphthonges, which happeneth by rayson of closyng of theyr mowth agayne, to come to the places where M, and N, be formed, but chiefely bycause no parte of the vowell at his expressyng shulde passe forth by the mowth, where as els the frenchemen sounde the same thre vowelles, in all thynges lyke as the Italiens do, or we of our nation, whiche sounde our vowelles aryght, and, as for in theyr vowell I, is no diffyculty nor difference from the Italien sounde,¹ sayyng that so often as these thre letters

¹ This passage, which had not been noted when the observations *suprà* p. 110 were written, seems to confirm the conclusions there drawn respecting Palsgrave's pronunciation of English long *i*, which he here identifies, when sounded "aryght" with the French and Italian *i*. Concerning the Italian sound there was never any doubt. Concerning the French there is also perfect unanimity, except in the one passage from Palsgrave himself, cited *suprà* p. 109. The limitation "aryght," applied to English sounds, implies that the general pronunciation was different

from Palsgrave's, but that he disapproved of that general usage, which we know must have been (*ei*), and practically identified the "right" sound, that is, *his own* sound of long *i*, with (*ii*). Yet that it was not quite the same is shewn by the passage on p. 109. Hence the conclusion that it was (*ii*) appears inevitable. And as this conclusion is drawn from premises altogether different from those which led to the same result for Chaucer's pronunciation (p. 282), it is a singular corroboration of the hypothesis there started for the first time.

I, L, L, or I, G, N, come before any of the fyrst thre vowels A, E, or O, they sound an I, brefely and confusely betwene the last consonant and the vowell folowyng, where as in dede none is written whiche soundyng of I, where he is nat written, they recompence in theyr v, for though they wryte hym after these three consonantes F, G and Q, yet do they onely sounde the vowell next folowyng v. . . . So that, for the most generalte, the frenche men sounde all theyr fyue vowelles lyke as the Italiens do, except onely theyr v, whiche euer so often as they vse for a vowel alone, hath with them suche a sounde as we gyue this diphthong *ew*, in our tong in these wordes, rewe an herbe, a mew for a hawke, a clewe of threde.

"And as touchyng theyr diphthonges, besydes the sixe, whiche be formed by addyng of the two last vowelles vnto the thre fyrst, as *ai*, *ei*, *oi*, *au*, *ev*, *ov*, they make also a seynth by addyng of the two last vowelles together *vi*, vnto whiche they gyue suche a sounde as we do vnto *wy* in these wordes, a swyne, I twyne, I dwyne, soundyng *v*, and *y*, together, and nat distynctly, and as for the other sixe haue suche sounde with them as they haue in latin, except thre, for in stede of *ai*, they sounde most commonly *ei*, and fo *oi*, they sounde *oe*, and for *av*, they sounde most commonly *ow*, as we do in these wordes, a bowe, a crowe, a snowe,¹

"What consonantes so euer they write in any worde for keepyng of trewe orthographie, yet so moche couyt they in redyng or spekyng to haue all theyr vowelles and diphthonges clerly herde, that betwene two vowelles, whether they chaunce in one worde alone, or as one worde fortuneth to folowe after an other, they neuer sounde but one consonant atones, in so moche that if two different consonantes, that is to say, nat beyng both of one sorte come together betwene two vowelles, they leue the fyrst of them vnsounded, and if thre consonantes come together, they euer leue two of the fyrst vnsounded, puttyng here in as I haue sayd, no difference whether the consonantes thus come together in one worde alone, or as the wordes do folowe one another, for many tymes theyr wordes ende in two consonantes, bycause they take awaye the last vowell of the latin worde, as *Corps* commeth of *Corpus*, *Temps*, of *Tempus*, and suche lyke, whiche two consonantes shalbe lefte vnsounded, if the next worde folowyng begyn with a consonant, as well as if thre consonantes shuld fortune to come together in a worde by hym selfe. But yet in this thyng to shewe also that they forget nat theyr ternarius numerus of all theyr consonantes, they haue from this rule priuyleged onely thre, M, N, and R, whiche neuer lese theyr sounde where so euer they be founde written, except onely N, whan he commeth in the thyrd parson plurell of verbes after E.

"The hole reason of theyr accent is groundd chefly vpon thre poyntes, fyrst there is no worde of one syllable whiche with them

¹ This gives the following usual, as distinct from Palsgrave's theoretically correct pronunciations: *ai*=(xi), *oi*=(oe), *au*=(ou), meaning, perhaps, (oo).

hath any accent, or that they vse to pause vpon, and that is one great cause why theyr tong semeth to vs so brefe and sodayn and so harde to be vnderstanded whan it is spoken, especially of theyr paysantes or commen people, for thoughe there come neuer so many wordes of one syllable together, they pronounce them nat distinctly a sonder as the latines do, but sounde them all vnder one voyce and tenour, and neuer rest nor pause upon any of them, except the commyng next vnto a poynt be the cause thereof. Seconde, euery worde of many syllables hath his accent vpon the last syllable, but yet that nat withstandynge they vse vpon no suche worde to pause, except the commyng next vnto a poynt be the causer therof, and this is one great thyng whiche inclineth the frenchemen so moche to pronounce the latin tong amysse, whiche contrary neuer gyue theyr accent on the last syllable. The thyrde poynte is but an exception from the seconde, for, whan the last syllable of a frenche worde endeth in E, the syllable next afore him must haue the accent, and yet is nat this rule euer generall, for if a frenche worde ende in Te, or have z, after E, or be a preterit participle of the fyrst coniugation, he shall haue his accent vpon the last syllable, accordyng to the seconde rule. . . .

"Whan they leue any consonant or consonantes vnsounded, whiche folowe a vowell that shulde haue the accent, if they pause vpon hym by reason of commyng next vnto a poynt, he shalbe long in pronunciation, So that there is no vowell with them, whiche of hymselfe is long in theyr tong As for Encletica I note no mo but onely the primatiue pronownes of the fyrst and seconde parsones syngular, whan they folowe the verbe that they do gouerne."

See especially Livet (*suprà* p. 33), and Didot (*suprà* 589, note 1), for accounts of all these writers except Bar. L. E. H. Didot's *Historique des réformes orthographiques proposées ou accomplies*, forming appendix D to his work, pp. 175-394, carries the list of authors down to the present day, and is very valuable.

In the following tabular view, simple numbers following any

author's name refer to the page of this work in which the required quotation will be found; if p. is prefixed, the reference is to the page of the author's own work, of which the title is given in the passages just referred to. No pretension is made to completeness.

In order not to use new types, the three varieties of *e* are represented by *æ*, *e*, *é*, in all the authorities (except Sylvius, where they could not be clearly distinguished, and where his own signs are *é*, *z*, *è*, therefore employed), and *æ*, *l*, are used for Meigret's forms for *n*, *l*, *mouillées*. In Ramus certain combinations of letters, as *au*, *ou*, *ou*, *ch*, are formed into new letters, and are here printed in small capitals thus *au*, *eu*, *ou*, *ch*. Sylvius employs *ai*, *oi*, &c., as diphthongs, where the circumflex properly extends over both letters, but the modern form has been used for convenience.

The Vowels and Diphthongs.

A=(*a*) L. 815, *A*=(*a*) P. 59, *A*=(*a*) "ore largiter diducto profertur" S. 2, *A*=(*a*) G. 61, uncertain (*a*, *a*) M., Pel., R. *A*=(*a*) B. *A*=(*a*), E. 226, n. Afterwards English writers identify it with (*aa*). In this uncertainty it is best taken to be a full (*a*), but not (*ah*), as B. warns, saying "Hæc vocalis, sono in radice linguæ solis faucibus formato, ore hianthe clarè et sonore à Francis effertur, quum illam Germani *obscurius* et sono quodam ad quartam vocalem *o* accedente pronuntient." B. p. 12. In the termination *-age*=(*ai*) P. 120. "You must note that *a* is not pronounced in these words, *Aoust*, *saoul*, *aorner*, *aoriste*, which words must be pronounced as if they were written thus, *oot*, *soo*, *orner*, *oreeste*." E.

AI=(*ai*) Bar. 806, doubtful, L. 815, *AI*=(*ai ei*) P. 118. "Diphthongos à Græcis potissimum mutuati videmur, scilicet, *ai*, *ei*, *oi*, *oy*, *ai*, *eû*, *oi*. Eas tamen quàm cæteri Europæ populi plenius et purius pronuntiatione, si quid judico, exprimimus. Si ipsæ simul concretæ, debent in eadem syllaba vim suam, hoc est, potestatem et pronuntiationem retinere, ut certe ex sua definitione debent. Frustra enim distinctæ sunt tam literæ quàm diphthongi, si sono et potestate nihil differunt. Namque *ai* Græcis propriam, Latinis quibusdam poetis usurpatam, non æ seu *q* cum Græcis: non *ai* divisas vocales cum poetis Latinis, sed *ai* una syllaba utriusque vocalis sonum leniter exprimente, pronuntiamus: qualis vox ægrotis et derepente læsis est plurima." S. p. 8. This should

mean, "not (*æ*), nor (*a,i*), but (*ai*)," especially as (*ai*) is a common foreign groan answering to the English (*ouu*!). But the following passages render this conclusion doubtful: "ai diphthongum Græcam aut sæpe dividunt Latini, dicentes pro *h* *maia* Mai-a, *è* *aias* Ai-ax, & Aul-ai, aqu-ai. pict-ai, terr-ai pro aulæ, aquæ, terræ. Sic nos eandem modo conjunctam servamus, modo dividimus ad significandum diversa, ut G-è traî [*g*- is the consonant (*zh*), *è* is the muto-guttural] id est traho et sagittam emitto, quam ob id traîct à tractus vocamus. G-è traî, id est prodo et in fraudem traho, licet hoc à trado videri queat. G'-haî, id est habes et teneo: infinitivo hauoir. G-è haî et g-è hé, id est, habeo odio et odi. infinitivo haîr, uti à traî traître: à traî traîr infinitivos habemus" S. p. 14. "Discre-sis, id est divisio unius syllabæ in duas, ut Alb-ai, long-ai, syl-læ trissyl-laba; pro Albæ, longæ, syl-læ dis-syllabus. Eadem modo et Galli βόσκον bois, id est lignum et sylvæ. bóis, id est buxus. Habeo g'-haî, id est teneo, et g-è haî, id est odi" S. p. 56. Hence perhaps Sylvius's diphthong was really (*æ*) although he disclaims it. *A*=(*ai*, *ci*, *e*) the last two more frequently, M. 118, Pell., R. 119, B. *A*=(*e*) in *i'ay*, *ie feray*,=(*a,i*) in *Esa-y-e*, *abba-y-e*,=(*i*) in *ains*, *ainçois*, *ains*, E. nearly the same H. 227 note. The usage of M., Pell., R., B. seems to be as follows.

(*ai*) —aymant, aydant, hair, payant, gayant, ayant, ayana, aye, ayet, ayons, vraye, nayf, M.—paia, payer, naïue, Pell.—païant, gaïant, aidant,

piis præteriti temporis primæ. Sed excommunicem, sacrificem et similia, quando scilicet i præcedit, ferè Galli pronuntiant. Deinde exiliter, et voce propemodum muta; quod tum, grauis accentus virgula notamus, quoniam vox in eo languescens velut intermoritur, vt ama aimès, Petrus Pierrè. Medio denique modo, quod lincola à sinistra in dextram partem æqualiter & recte ducta ostendimus vt amate aimès. Adde quod syllabam el, nonnunquam voce Latinorum proferimus, vt crudelis cruel, quo modo Gabriel, aliquando autem ore magis hianti: vt illa ellè. E etiam ante r, s, t, x, & quasdam alias consonantes, in omnibus apud Latinos vocem non habet eandem. Natiuum enim sonum in pater, es à sum, et textus pronuntiatione quorundam retinet. In erro autem, gentes, docet, ex, nimis exertum, et, vt sic dicam, dilutum. Sic apud Gallos sono genuino profertur in pér, à par paris; és à sum; ét, coniunctione: in qua t omnino supprimunt Galli contra rationem. Alieno autem et lingua in palatum magis reducta, diductisque dentibus in erracer pro cracer, id est, eradicare: es, id est assis; escirè [s means s mute], id est scribere ettoné, id est attonitus; à pedo pet: epellet, id est appellare, extraire: id est extrahere." — S. p. 2. The passage is very difficult to understand. His *é* seems to be (*ee*), his *è* (*e*), his *ê* (*e*), and his exceptional *e* to be (*æ*). *E* = (*æ*, *e*?) M. 119, note, = (*æ*, *e*, *æ*?) Pell. R. 119, n. "Tertius huius vocalis sonus Græcis et Latinis ignotus, is ipse est qui ab Hebræis puncto quod Seva raptum vocant, Galli vero *e* foemineum propter imbecillam et vix sonoram vocem, appellant." B. p. 13.—"*e* Feminine hath no accent, and is sometimes in the beginning or midst of a word, as *mesurer, mener, tacitement*, but moste commonly at the ende of wordes, as *belle fille, bonne Dame*, hauing but halfe the sound of the *é* masculine, and is pronounced as the second syllable of these latine wordes *facere, legere*, or as the second syllable of *namely*, in English, and like these english wordes *Madame, table*, sauing that in the first, the english maketh but too sillables, and we make three, as if it were written *Ma-da-me* and in *table* the english pronounceth it

as if the *e* were betweene the *b* and the *t* thus, *ta-bel*, and the French doe sound it thus, *ta-ble*: you must take heede not to lift vp your voice at the last *e* but rather deprime it. *e* Feminine in these wordes, *Je lisoie, l'escripuoye*, and such like, is not sounded, and serveth there for no other vse then to make the word long: doe not sound *e* in this word *dea*, as, *ouy dea Monsieur*, say *ouy da*: sound this word *Iehan* as if it were written *Ian*," E. And, similarly: "We do not call, *é*, masculine for the respect of any gender, but because that it is sounded lively: as *dote, lapide, me, te* in Latine: . . . and by adding another, *e*, it shall be called *e*, feminine, because that it hath but halfe the sound of the other, *é*: as *tansée, fouettée*, &c. where the first is sharpe, but the other goeth slowly, and as it were deadly . . . VVhresoeuer you find this, *e*, at the words end, it is an, *e*, feminine . . . pronounce it as the second syllable of *bodely* in English, or the second of *facere* in Latin," H. p. 156. The transition in case of the present *e* must seems to have been (*e*, *æ*, *e*) in French, and in German to have stopped generally at (*æ*), though (*e*) is still occasionally heard, 195, n. 2. *EAU* = (*æo*) M. 137. *EAU* = (*æo*?) Pel. who notes the Parisian error *en sio d'io* for *un seau d'eau*, p. 17, shewing only a variety in the initial letter. *EAU* = (*æo*), as *chapeau, manteau*, R. p. 37.—"In hac triphthongo auditur *e* clausum cum diphthongo *au*, quasi scribas *eo*, vt *eau* aqua (quam vocem maiores nostri scribebant et proferebant addito *e* foemino *eau*)," B. p. 52. "Pronounce these wordes *beau, veau*, almoste as if there were no *e*," E. *EI* = (*ei*, *eei*) P. 118, "ei quoque [see Sylvius remarks on *ai*], seu *ei*, non *i*, tantum cum Græcis, neque nunc *i*, nunc *e* cum Latinis, hanc in hei interiectione servantibus, in voce autem Græca in *i*, aliquando in *e* permutantibus et pronuntiantibus; nec *ei* diuisas vocales efferimus, sed *ei* monosyllabum, voce scilicet ipsa ex vtraque in unam concreta, ut ingenium engen, non engen, nec engen." S. p. 8. This ought to mean "not (*i*), nor (*e*), nor (*e*, *i*), but (*ei*)," yet the description cannot be trusted, see *AI*. We find: *peine, peintres, çointure, s'emrueillat*, &c M. —

Meigret, meilheures, peine, pareilhe, Pel.—peine, fsindre, peindre, raine, Seine, elaine = Hélène, R.—“Hæc diphthongus [ei] non profertur nisi mox sequente *n*, et ita pronuntiatur ut paululum prorsus ab *i* simplici differat. vt *guine* vagina [=gaïne], *plein* plenus; cuius tamen fœmininum *plene*, usus obtinuit ut absque *i* scribatur et efferatur, Picardis exceptis, qui ut sunt vetustatis tenaces, scribunt et integro sono pronuntiant *pleine*,” B. p. 45.—“Pronounce these wordes *neige*, *seigne*, or any words where *e* hath *i* or *y*, after it like *e* masculine, as though there were no *i* at al.” E.

EU=(eu, ey?) Barc. 806, L 815, EU=(eu, y) P.137.—“Eussonum habetvarium, aliquando eundem cum Latinis, hoc est plenum, ut cos cotis c^eût, securus seûr, maturus meûr, qualis in euge, Tydeus [this should be (eu)]. aliquando exilem et proprius accedentem ad sonum diphthongi Gæcæ *eu*, ut cêûr [in Sylvius the sign is eu with a circumflex over both letters, and a bar at the top of the circumflex, thus indicated for convenience], soror seûr, morior g-è meûr: nisi quod u in his, non velut f sonat (quomodo in *av* et *ev*) sed magis in sonum u vocalis inclinat (can this mean (ey) ?]: id scribendo ad plenum exprimi non potest, pronuntiando potest. Sed in his forte et in quibusdam aliis, hæc vocis eû varietas propter dictionum differentiam inuenta et recepta est. Illam eû, hanc eû lineola in longum superne producta, sonum diphthongi minus compactum et magis dilutum significante notamus.” S. p. 9. The difficulty of distinguishing “round” vowels, that is those for which the lips are rounded, from diphthongs, especially in the case of (y, æ),—see Hart, *suprà* p. 167, p. 796, n. col. 1, and B.’s remark below, makes all such descriptions extremely doubtful. S. may have meant (y, æ) or (y, œ) by these descriptions, and these are the modern sounds. EU=(ey) M. 137, see note on that page for G. des autels, Pel. B.—“La sixiesme voyelle cest vng son que nous escripuons par deux voyelles *e* et *u*, comme en ces mots, *Peur*, *Meur*, *Seur*, qui semble aussi auoir este quelque diphthongue, que nos ancestres ayent prononcee et escripte, et puis apres,

comme nous auons dict de Au que ceste diphthongue ayt este reduicte en vne simple voyelle: ou bien que lon aye pris a peu pres ce que lon pouuoit.” R. p. 9.—“In hac diphthongo neutra vocalis distinctè sed sonus quidem [quidam ?] ex *e* et *u* temperatus auditur, quem et Græcis et Latinis ignotum vix liceat ulla descriptio peregrinis exprimere.” B. p. 46.—“*e* In these words, *du feu* which signifieth fire, *en peu* a little, *demeurer* to dwell or tarrye, *en Jeu* a Playe or game, *tu veulx* thou wilt, are not pronounced like these: *Je feu* I was, *J’ay peu* I haue bene able, *J’eû* I had, *Je les ay eûs* I haue seene them: for these last and such like, ought to be pronounced in this wise *Je fu*, *J’ay pu*, *Iu*, *vus*, as though there were no *e* at all, but *u*, and in the former wordes, *e* is pronounced and ioyned with *u*.” E. As *eu* is frequently interchangeable with, or derived from *o*, *ou*, the probability is that the transition was (u, eu, œ, ø) both the sounds (œ ø) being now prevalent, but not well distinguished, see 162, note 3, and 173, note 1. It will be seen by referring to this last place that I had great difficulty in determining what sounds M. Féline intended by “l’e sourd” and *eu* in modern French. I there decided that the former was (ø) and the latter (œ). M. Féline has been dead several years, but Prince Louis Lucien Bonaparte, who conversed with him on the subject, says that I have just reversed the values of Féline’s letters, and that Féline’s *e* & *œ* are my (œ, ø) respectively. Hence wherever I have hitherto cited Féline’s pronunciations this correction must be made, and especially on 327, the signs (ø, œ) must be interchanged throughout, as (kœ læ siel kœkœ zhur) for (kø læ siel kœkø zhur). It will be seen in the same place, *suprà* 173, note 1, that M. Tarver made no distinction between the two sounds. M. Edouard Paris, in the introduction to his translation of St. Matthew into the Picard dialect of Amiens, brought out by the Prince, makes *e* “sourd” in *le, peu, de, jeû*, meaning, as the Prince informed me (læ, pæ, dæ, zhæ), and *eu* “ouvert” in *veuf peuple*, meaning, on the same authority, (vœf, pœph). On turning to M. Féline’s

Dictionary I find, as interpreted by the Prince, (lœ, pœ, dœ, shœ; vœf, pœpl), so that in the two words *le, de*, Féline differs from 'E. Paris, and the latter agrees with me in the sound I have assigned to these words. According to the Prince, half France says (lœ, dœ), and the other half (lœ, dœ). In Germany also the sounds (œ, œ) are confused, and have no difference of meaning. In Icelandic they are kept distinct by the different orthographies *u = (œ), ö = (œ)*, 546, 548. Compare also the mutation or *umlaut*, (*o . . i = sh, e, i*), 557.

I = (i, ii) L. 815, P. G. 100, 110, occasionally (*ii* ?) P. 109, 817, n. *I = (i)* S. M. Pel. R. B.—“Our *i* is sounded as *i*, in these english words, *ié, is*, or as the english double, *ee* as *si vous avez tiré*, sound as if it were written *see vous avez tiré*.” E.

O = (o) P. 93. “A, i, o, Latinorum pronuntiationem, quod sciam, apud Gallos non mutant.” S. p. 2. The traditional pronunciation of Latin *o* in Italy is (*o*); and (*o*), as distinguished from (*o*) which must be attributed to *au*, seems to be the sound accepted for French *o*, by the other authorities. See also B. 131, note col. 2.—“*o* Is sounded as in English, and in the same use, as *pot, sot, opprobre*, saving that in these words following, *o* is sounded like the english double *oo*, as *mol, fol, sol, col*, which must be pronounced, leaning *l*, thus: *foo, moo, soo, coo*, except this word *Sol*, as *en escu Sol*, a Crowne of the Sun: where every letter is pronounced.” E.

OEU. “[scribimus] *oeuvre, voeu, oeuf* . . . in quibus tamen omnibus *o* penitus quiescit. Pronuntiamus enim *euure, euf, beuf*.” B. p. 54.

OI = (oi, ee ?) Barc. 806, *OI = (oi, oe, oa ?)* P. 130. “*oi*, non *i*, cum Græcis, nec *œ* cum Latinis, sed *vi*triusque vocalis servata, ut monachus moine: datiuo *moi*, id est mihi *moi*. Eodem sono *oy* pronuntiamus ut genitivo *mov*, id est mei *mòy*.” S. p. 8. This ought to mean *oi = (oi)*, and the last remark may refer only to the use of *moi* in French for both *moi, mov* in Greek. Again he says: “Quid quod hæc diphthongus pro *e* supposita Parrhiensibus adeo placuit, ut ipsarum quoque mutarum voces in *e* desinentes, per *oi* Parrhi-

enses corruptè pronuntient, *boi, oet, doi, g-oi, poi, toi*, pro *be, ce, de, ge, te*; Quo minus mirum est Galles pronomina *moi toi soi* pronuntiare. Desinant igitur Picardis, puritatem linguae et antiquitatem integritas seruantibus illudere Galli, quod dicant *mi, ti, si raro*; et *mè, tè, sè à mihi vel mi, tibi, sibi, vel ti, si*, analogia primæ personæ. Quamquam *moi, toi, soi*, tolerabiliora sint, et fortè Græcæ, ut in pronomine ostendimus. Neque posthac in Normannos cauillantur, omnia hæc predicta et consimilia non per *oi*, sed per *e* pronuntiantes, *telè, estellè* [*s* used for S's mark of mute *s*], *sèè, ser, dé, tect, velè, vèrè, ré, lé, amèè, &c*, *aimèrèè, &c* [*modèr, toile, étoile, soie, soir, dois, toit, voile, voire, roi, loi, amaye ? amadem, aimeraye ? amarem*] Quam pronuntiationem velut postliminio reuersam hodiè audimus in sermones accolarum huius vrbis et incolarum, atque adeò Parrhiensium. ut verum ait Horatianum illud, Multa renascentur, quæ iam cecidere. Esse quid hoc dicam? pro stella estoillè dicunt adhuc nonnulli. pro stellatus autem si qui estoillè, non estellè, pro adueratus (sic enim pro asserta re et affirmata loquuntur) au-oirè, non au-erè [*u = (v)*]: endoibtè ab indebitatus, id est ære alieno oppressus, non endeibtè: soletè non seetè, diminutuum à sericum pronuntiet, omnes risu emori et barbarum explodere.” S. p. 21. Viewed in relation to modern habits, some of these uses are very curious. *OI = (oi, oe, oa ?)* M. 130. *OI = (oi, oe, æ)*, Pell. As in the following words: *sauours, François, connoissances, j'avos, renoet, auoet = avaient, prononçoet, croe, toe, aparostre, mok, terroet, voyeè, fozè*, —“et certain par les Écriz des Vieux Rimeurs François, qu'iz disoet *iz aloyet iz fæsoyet de trois silabes*” Pel. p. 127.—“Aujourd'hui les uns diset *eimer*, les autres *emer*, les uns *j'emore* les autres *metet* *ou y an la pénultime e diset j'emoreye, j'oxye* e les autres. Les uns diset *Reine* les autres *Roene*. Mêmes a la plus part des Courtisans vous orrez dire *iz allet, iz venet*: pour *iz aloet, iz venoet*.” Pel. p. 85.—*OI = (oi)* *moindre, poindre, point, coin, soin, voyant, oyant, lar-*

moyant, fouldroyant, and = (or), omis, voela, &c R. *OI*=(oi, or) and (oa) faultily, B. 130 note.—“Whereas our Countrimen were wont to pronounce these wordes, *connoistre* to knowe, *apparoistra* it shall appere, *Il parle bon François* he speaketh good French, *Elle est Angloise* she is an English-woman, as it is written by oi or oy: Now since fewe yeres they pronounce it as if it were written thus, *coônître*, *ap-parêtra*, *fraunsès*, *Aunglèze*.” E. *OU*=(ou?) L. 815. *OU*=(u) P. 149, “*ou* seu oû cum neutris [Græcis et Latinis] pronuntiamus: siquidem nec per u Græcorum more, sed contra u in *ou* seu oû persepe mutamus: Hac autem diphthongo caret sermo Latinus.” S. p. 8. 9. As there is no reasonable doubt that old french *ou*=(uu), this passage is quite unintelligible, unless, by saying that the Greeks called it *u*, he meant to imply that they called it (yy). No other passage in S. elucidates this. *OU* is called “o clôs,”=(uh?) M. 149,

but see 131, note, col. 2, Pell. & R. evidently take *OU*=(u).—“In hac diphthongo neque o sonorum, neque u exile, sed mixtus ex utroque sonus auditur, quo Græci quidem veteres suum u, Romani verò suum v vocale vt et nunc Germani, efferebant.” B. p. 49.—E. writes the sound oo in English letters.

U=(y) L. 815, P. 163, “ordine postremum, ore in angustum clauso, et labiis paululum exporrectis” S. p. 2, probably M. 164; and similarly Pell., R.—“Hæc litera, quum est vocalis, est Græcorum ypsilon, quod ipsa quoque figura testatur, efforturque veluti sibilo constrictis labris efflato.” B. p. 17.—E. 227, note 1; H. 228, note.

UI, is not alluded to by any other authority except P., probably because it occasioned no difficulty, each element having its regular sound (yi) as at present. But P. is peculiar, 110, 818. E. writes the sound *wee* in English letters.

The Nasal Consonants and their effect on the Vowels.

M. “in the frenche tong hath thre dyuers soundes, the soundyng of m, that is most generall, is suche as he hath in the latyn tong or in our tong. If m folowe any of these thre voweles a, e, or o, all in one syllable, he shalbe sounded somthyng in the nose, as I haue before declared, where I have shewed the soundyng of the sayd thre voweles [143, 150. and also: “if m or n folowe nexte after e, all in one syllable, than e shall be sounded lyke an Italian a, and some thyng in the noose.”] If m, folowyng a vowel, come before b, p, or sp, he shalbe sounded in the nose and almost lyke an n, as in these wordes *plomb*, *colomb*, *champ*, *domptér*, *circumspection*, and suchlike.” P. folio 3, see also supra 817.—“M, est ferme au commencement de la syllabe: en fin elle est liquido, comme *Marie*, *Martyr*, *Nom*, *Ban*, *Arriereban*: qui a este cause a nos Grammairiens enseigner que m deuant p, estait presques supprimee, comme en *Camp*, *Champ*. N est volontiers ferme au commencement du mot, et en la fin: comme *Nanin*, *non*, mais au milieu elle est quelquefois liquide, comme en *Compaignon*,

Espaignol,” R. p. 24. Here the “liquid” n appears to be (nj), and n final is “firm” as well as n initial, but a difference between m final and m initial is found, the latter only being “firm” and the former “liquid,” and this liquidity, which is otherwise incomprehensible, would seem to imply the modern nasality of the previous vowel, were not final n, the modern pronunciation of which is identical, reckoned “firm.” The two passages are therefore mutually destructive of each other’s meaning. In his phonetic writing R. makes no distinction between firm and liquid m, but writes liquid n (nj) by an n with a tail below like that of ç.

N=(n) only, Bar. 810. *N* “in the frenche tong, hath two dyuers soundes. The soundyng of n, that is moost generall, is suche as is in latyne or in our tonge. If n folowe any of these thre voweles a, e, or o, all in one syllable, he shalbe sounded somthyng in the nose, as I have before declared, where I have spoken of the sayd thre voweles. That n leseth never his sounde, nother in the first nor meane syllables, nor in the last syllables, I have afore declared in the generall

rules. But it is nat to be forgotten, that *n*, in the last syllable of the thirde parsons plurelles of verbes endyng in *ent*, is ever leste vnsounded." P. fol. 13.—In the phrase *enallant*, M. heard *en nallant*, with the same *n* at the end of the first word as at the beginning of the second, 189.—"Franciscè sic rectè scripseris *Pierre s'en est alle*, quod tamen sic efferendum est, *Pierre s'en nest alle*. Sic *on m'en a parle* ac si scriptum casset, *on m'en na parle*, illo videlicet prioris dictionis *n* dagheesato, et cum vocali sequentem vocem incipiente coniuncta, pro eo quod Parisiensium vulgus pronuntiat: *il se nest alle*, *on me na parle*, per *e* fœmineum vt in pronomibus *se* et *me*. Sed hoc in primis curandum est peregrinis omnibus quod antea in literam *m* monui [ita videlicet vt non modò labia non ocludantur, sed etiam linguæ mucro dentium radicem non feriat p. 30], nempe hanc literam quoties syllabam finit, quasi dimidiato sonò pronuntiandam esse, mucrone videlicet linguæ minimè illiso superiorum dentium radici, alioqui futura molestissima pronuntiatione: quo vitio iqtter Francos laborant etiamnum hodie Nortmanni. Græcos autem haud aliter hanc literam ante *κ*, *γ*, *χ*, pronuntiare consuevisse annotat ex Nigidio Figulo Agellius." B. p. 32. This description seems to indicate the modern pronunciation nearly. E. and H. have no remarks on M, N.

AM, *AN*=(au,m, au,n) P. 143, 190, but this nasalisation is rendered doubtful by his treatment of final *e* as (*o*) 181, note 5, and 817.—For S. see under *E*, suprà p. 822, col. 1. "*Vrai* et qu'an Normandie, e ancors an Bretagne an Anjou e an. . . . Meins . . . iz prononcet l'*a* davant *n* un peu bien grossemant, e quasi comme s'il i auoet *aun* par diftongue [which according to his value of *au* should = (*oon*), but he probably meant (*aun*)] quand iz diset Nortmannund, Nauntès, Aungers, l'e Mauns: graund chere, e les autres. Mes tele maniere de prononcer sant son terroir d'une lieue." Pell. p. 125. "Pronounce alwaies *an* or *ans*, as if it were written *aun*, *auns*," E. that is, in 1609, (*aan*, *aans*). "Also in these words following, *o* is not sounded, *en paon*,

en faon, *en tahon* . . . all which must be pronounced leauing *o* thus: *paun*, *faun*, *en taun*." E.

AIN=(*in*), see under *AI*, for numerous examples. *AI*=(*in*), "Also in these wordes, *ains*, *ainçois*, *ainsi*, or any other word where *a* is ioyned with *in*, *a* loeeth his sound and is pronounced as english men doe pronounce their *I*, as if it were *ine*, *insee*, *insois*. Also *pain*, *vilain*, *hautain*, *romain*, are to bee pronounced as the english *i*." E.—*AI*=(*in* f) "We sound, *ain*, as, *in*: so in steed of *main*, *maintenant*, *demain*, *saint* . . . say, *min*, *minenant*, *dein*, *sint*: but when *e*, followeth *n*, the vowel *i*, goeth more toward *a*; as *balaine* a whale, *sep'maine* a weeke, and to make it more plaine, *romain*, *certain*, *vilain*, *souverain*, are pronounced as *romin*, *certin*, *vilin*: but adde *e*, to it, and the pronuntiation is clean altered, so that, *romaine*, is as you sound, *vaine*, in English and such like, but more shorter." H. p. 186.

EM, *EN*=(*em*, *en* f) except in *-ent* of the 3rd person plural =(*-et*)? Bar. 810; *EM*, *EN*=(*a m*, *a n*) when not before a vowel, P. 189, "Quid quod Parrhienseses e pro *a*, et contrà, præsertim m vel n sequente, etiam in Latinis dictionibus, Censorini exemplo, et scribunt et pronuntiant, magna sæpe infamia, dum amantes pro amantes, et contrà amantes pro amantes, aliàque id genus ratione confundunt." S. p. 11. It is not quite certain whether S. is referring to the Parisian pronunciation of Latin or French, as the example is only Latin, but probably, both are meant. Observe his remarks under *E*, suprà p. 821, col. 2. *EM*, *EN*=(*em*, *en*). M. 189. *EM*, *EN*=(*am*, *an*), Pell. who objects to the pronuntiation (*em*, *en*) of M., and says: "*mon auis et de deuoir ecrire toutes teles diccions plus tot par a que par e*. E le peut on ancor' plus certainement connoître, quand on prononce ces deus propositions qui sont de même ouye, mes de diuers sans, Il ne

Comme au lieu que vous dites santir e mantir deuers l'a, nous prononçons s e n t i r e m e n t i r deuers l' e: e si font quasi toutes autres nations fors les François." Pel. p. 125.—R. writes phonetically: en, diferenses, envoir, enfans, &c like M.—"Coalescens e in eandem syllabam cum m, vt *temporel temporalis*, vel n, siue sola et sonora vt *e'nten* ego intelligo: siue adiuncto d vt *entend* intelligit; vel vt *content* contentus; pronuntiatur ut a. Itaque in his vocibus *constant* constans: and *content* contentus, *An* annus, and *en* in, diuersa est scriptura, pronuntiatio verò recta, vel eadem, vel tenuissimi discriminis, et quod vix auribus percipi possit. Excipe quatuor has voculas, *ancien* trissyllabum, antiquus; *lien* vinculum, and *moijen* medium, *flem* fimus, dissyllaba; and *quotidian* quotidianus, quatuor syllabarum: denique omnia gentilia nomina, vt *Parisien*, *Parisiensis*, *Sauoisien* Sabaudiensis; in quibus e clausum scribitur et distinctè auditur, i and e nequaquam in diphthongum conuenientibus. . . . Alter huius literæ sonus adulterinus est idem atque literæ i geminata duplicis, in

unam tamen syllabam coalescentis, quanvis scribatur *ie*. *litera n* sequente atque dictionem finiente. B. p. 15.—"When e feminine maketh one syllable with m or n, it is sounded almost like a, as *enfantement, emmailloter*, pronounce it almost as *anfaumentant, ammallioter*, except when i or y commeth before *en* as *moyen, doyen, ancien*, or in wordes of one syllable, as *mien, tien, chien, rien, sien*, which be all pronounced by e and not by a. Also, all the verbos of the third person plural that doe end in *ent*, as *Ilz disent, Ilz rient, Ilz faisoient, Ilz chantoient*, there e is sounded as hauing no n at all, but rather as if it were written thus: *ee diset, ee riet, ee faizoiet, ee shantoyet*." E.

EIN=(ein, ain), see under *AI* for numerous examples, and the quotation from B. under *EI*. It seems impossible to suppose that in the xvi th century it had already reached its modern form (ea), into which modern *in* has also fallen.

IN=(in). No authority notices any difference in the vowel, as M., Pell, R. all write *in* in their phonetic spelling, and it is not one of the three vowels, a, e, o, stated by P., under M, N, to be affected by the following m or n. See the quotations from E. and H. under *AIN*. E. gives the pronunciation of *honorez les princes* as *onòrè lé prences*, which seems decisive.

ON=(on?) Bar. 810. (u n) P. 149.—M. Pel. R. write simply *on*=(on). E. gives the pronunciation of *nous en parlerons après elles* que dira *on*, as *noou-zan-parleroon-zaprè-zelles, ke decra toon*.

CN=(yn). "V vocalis apud Latinos non minus quàm apud Gallos, sonum duplicem quibusdan exprimit sequente n, in eadem syllaba. Vt enim illorum quidam cunctus, percunctari, punctus, functus, hunc, et alia quædam natiuo u vocalis sono mane[n]te pronuntiant, ita iidem cum aliis,

pungo, fungor, tanquam per o scripta, pongo, fungor, proferunt, adulterata u vocalis voce genuina. Id quod sequente m, in eadem syllaba omnes Latini vbique faciunt, scamnum, dominum, musarum, et cætera pronuntiantes perinde ac si per o scriberentur: ita vt aliud non sonet o, in tondere, sontes, rhombus, quam u in tundere, sunt, tumba. Atqui o diductiore rictu pronuntiandum est quàm u." S. p. 3. This seems to refer to the French pronunciation of Latin, rather than of French, and it agrees with the modern practice. S. pro-

ceeds thus: "Ita Galli vnus vn communis commun, defunctus defunct, et alia quædam, sono vocalis seruato pronuntiant, [that is, as (yn)]. Contra vndecim uoncè, uncia uoncè, truncus truonc, et pleraque alia, non aliter pronuntiant quàm si per o scriberentur." S. p. 4. No other authority mentions or gives the slightest reason for supposing that either u or n differ in this combination from the usual value. P. writes *vn* for his *ung*, and M. has *un*, *une*, Pell. has *un*, E. pronounces *il est vn honorable personnage* as *ce-lè-tun-nonorable persoonnàge*.

The conclusion¹ from these rather conflicting statements seems to be, that sometime before the xviith century *ain*, *en*, *ein*, *ien*, *in*, *un* were pronounced (ain *een*, *en*, *ein*, *ien*, *in*, *yn*) without a trace of nasality; that during the xvith century a certain nasality, not the same as at present, pervaded *an*, *on*, changing them to (a,n, o,n), and perhaps (a,n, o,n), so that, as explained by P. 817, foreigners heard a kind of (u) sound developed, and English people confused the sounds with (au,n, u,n). In the beginning of the xviith

¹ This conclusion was the best I could draw from the authorities cited, but since the passage was written I have seen M. Paul Meyer's elaborate inquiry into the ancient sounds of *an* and *en*. (Phonétique Française: *An* et *En* toniques. Mém. de la Société de Linguistique de Paris, vol. 1, pp. 244-276). Having first drawn attention to the occasional derivation of Fr. *an*, *en* from Latin *in*, he says: "Notons ici que le passage d'*in* à *en* et celui d'*en* à *an* sont deux phénomènes phonétiques d'ordre fort différents. Dans le premier cas l' *n* est encore assez détachée de la voyelle et l' *i* s'éteint en *e*, ce dont on a de nombreux exemples dès le temps des Romains. Le passage de l' *e* à l' *a* ne pourrait se justifier de même. Aussi est-il nécessaire de supposer qu'au temps où le son *en* s'est confondu avec le son *an*, l' *n* faisait déjà corps avec la voyelle. Ce n'est pas *e* pur qui est devenu *a* pur, mais *e* nasalisé qui est devenu *a* nasalisé." p. 246. But this is theoretical. We have the fact that *femme* has become (fam) in speech, constantly so rhyming in French classics, and that *solennel* is (solanel) and a large class of words like *évidemment* (evidamaa) change *em* into *am* without the least trace of a nasal vowel having interposed. Hence the proof that M. Meyer gives of the

early date at which *en an* were confounded in French, which is most complete, exhaustive and interesting, does not establish their pronunciation as the modern nasal vowels. M. Meyer gives as the result of his investigation: "En Normandie, et, selon toute probabilité, dans les pays romans situés sous la même latitude, *en* était encore distinct de *an* au moment de la conquête de l'Angleterre (1066), mais l'assimilation était complète environ un siècle plus tard." p. 252. He adds: "en anglo-normand *en* et *an* sont toujours restés distincts, et ils le sont encore aujourd'hui dans les mots romans, qui ont passés dans l'anglais," and says we must acknowledge "qu'en ce point comme en plusieurs autres, le normand transporté en Angleterre a suivi une direction à lui, une voie indépendante de celle où s'engageait le normand indigène." After M. Meyer's acute and laborious proof of the confusion of *en*, *an* in France, and their distinction in England, we need not be astonished if *ai*, *ei* in England also retained the sound (ai) long after it had generally sunk to (ee) in France. These are only additional instances of the persistence of old pronunciations among an emigrating or expatriated people.

century these sounds, or else (a,n, u,n) were adopted by the Frenchman E., in explaining sounds to Englishmen. As to *en*, it became (an) or perhaps (a,n), even in xvii th century probably not before, but it must have differed from *an*, because Englishmen did not confuse it with (aun), many Frenchmen wrote (en), and P. 817, does not allow it to be nasal. The complete fusion of *an*, *en*, into one nasal probably took place in xviii th century, except in the connection *ien*, where *en* either remained (en) or was confused with *in*. The combinations *ain*, *in*, seem to have been quite confused, and we have no reason to suppose that they were pronounced differently from (in). Whether *ein* followed their example it is difficult to say. Probably it did, as it is now identical in sound. But *un* remained purely (yn). We had then at the close of the xvii th century *an*, *on*, *in*, *un* = (a,n, o,n, in, yn). Now in the xviii th or xix th century a great change took place in French; the final *e* became absolutely mute. Simultaneously with this change must have occurred the disuse of the final consonants, so that words like *regard* *regarde*, which had been distinguished as (regar *regarde*), were still distinguished as (regar *regarde*), now (regar, *regarde*). It then became necessary to distinguish *un*, *une*, which would have become confused. About this time, therefore, I am inclined to place the degradation of (in, yn) into (e,n, o,n). We should then have the four forms (a,n, o,n, e,n, o,n), which by the rejection of *n* after a nasalized vowel, a phenomenon with which we are familiar in Bavarian German, would become (a, o, e, o). The change thence to (aa, oa, ea, oa) or (aa, oa, ea, oa) the modern forms is very slight. The subject is a very difficult one, but there seems to be every reason to suppose that there was scarcely a shade of nasality in Chaucer's time, except perhaps in *an*, *on*, which generated his (aun, uun), and that the complete change had not taken place till the end of the xviii th or beginning of the xix th century. One important philological conclusion would result from this, namely that the modern French nasalisation offers no ground for the hypothesis of a Latin nasalisation. If this last existed, it must be otherwise traced. The history of Portuguese nasalisation now becomes interesting, but I am as yet unable to contribute anything towards it. The fact however that only two romance languages nasalise, while the Indian languages have a distinct system of nasalisation, and nasality is accomplished in Southern Germany, and is incipient, without loss of the *n*, in parts of the United States, is against the inference for Latin nasalisation from the existent nasalisation of French and Portuguese.

Other Consonants.

L mouillé. The nature of the sound cannot be inferred from Bar. 810, though it seems to be acknowledged. —“Whan soeuer the .iiii. letters illa, ille, or illo come to gither in a nowne substantiue or in a verbe, the i nat

hauyng an o, commynge next before hym, they vse to sounde an i shortly and confusely, betwene the last l and the vowel folowyng: albe it that in writtyng they expresse none suche, as these wordes, *ribaudaille*, *faillie*,

bailler, gaillardt, ueillardt, billardt, fueille, fille, cheuille, quocquille, ar-dillon, bastillon, covillon, and suche like, in redyng or spekyng they sounde thus: *ribaudaille, faillie, baillier, gailliar, ueilliar, billiar, fueillie, fillie, cheuillie, quocquillie, ardition bastillion, covillion*: but, as I haue sayd, if the i haue an o commyng next before hym, in all suche wordes they sounde none i after the letter l, so that these nownes substantiues *moylle, uoille, toille*, and *suche* lyke be except from this rule. . . Except also from this rule *uille* whiche soundeth none i after his latter l." P. i. 7.—"There is two maner of wordes harde for to be pronounced in french. The fyrst is written with a double ll whiche must be souned togider, as *lla, lle, lly, llo, llu*, as in these wordes, *bailla* gave, *tailla* cutte, *ceulle* gader, *feuille* lefe, *bally* bayly, *fally* fayle, *mouillet* white, *engenouillet* knele, *mallot* a tymer hamer, *feullu* full of leaves, *houllu*." G.—M. and R. have new characters for this sound; Pell. adopts the Portuguese form *Ch*. E. talks of ll which "must be souned liquid" in some words and "with the ende of the tongue" in others. But H. explains well; "when two, ll, follow, *ai, ei, oi, or ui*, they be pronounced with the flat of the tongue, touching smoothly the roofo of the mouth: yong boyes here in England do expresse it verie well when they pronounce *lucco* or *sauto*: and Englishmen in sounding *Collier*, and *Scollion*; likewise the Italian pronouncing *voglio, duoglio*: for they do not sound them with the end, but with the flat of the tongue, as *tailler* to cut, *treillis* a grate, *quenouille* a distaffe, *bouillir* to seethe; where you must note that, i, [which he prints with a cross under it to shew that it is mute,] serueth for nothing in words of *aill* and *ouill*, but to cause the two, ll, to be pronounced as *liquides*." H. p. 174. The transition from (li) through (ls) to (lj) was therefore complete in H.'s time. The sound has now fallen generally to (i, j, sh).

N mouillé, or GN. Bar. 809 and note, is indistinct.—"Also whan so ever these .iii. letters *gna, gne, or gno* come to gyther, eyther in a nowne substantiue or in a verbe, the reder shall

sounde an i shortly and confusely, betwene the n and the vowel folow-ynge, as for: *gaignd, seigneur, mignón, champignón, uergolgne, maintiengne, charoigne*, he shall sounde, *gaignia, seigneur, mignon, champion, uergoigne, charoigne, maintiengnie*, nat chaungyng therefore the accent, no more than though the sayd i were vnsounded. But from this rule be excepted these two substantiues *signe* and *régne*, with their verbes *signér* and *regnér*, which with all that be formed of them the reader shall sounde as they be wrytten onely." P.—"The second maner harde to pronounce ben written with *gn*, before a uowell, as *gna, gne, gni, gno, gnu*. As in these wordes *gagna* wan, *saigna* dyd blede, *ligne* lyne, *pigne* combe, *uigne* vyne, *tigne* scabbe, *compagne* felowe, *laigne* swell, *mignon* wanton, *mignarde* wanton, ye shal except many wordes that be so written and nat so pronounced, endyng specially in *e*, as *digne* worthy, *cigne* swanne, *magnanime* hyghe corage, etc. They that can pronounce these wordes in latyn after the Italians maner, as (*agnus, dignus, magnus, magnanimus*), have bothe the understanding and the pronouncyng of the sayde rule and of the wordes." G.—M. & R. havedistinct signs for this sound; see R. 826 under N. Pell retains *gn*.—"When you meete *gn*, melt the *g* with the *n*, as *ognon mignon*, pronounces it thus, *onion, minion*." E.—"We pronounce *gn*, almost as Englishmen do sound, *minion*; so melting, *g*, and touching the roofo of the mouth with the flat of the tongue, we say *mignon, compagnon*: say then *compa gne*, and not *compag-ne*. When the Italian saith *guadagno, bisogno*, he expresseth our *gn*, verie well." H. p. 198. It is not possible to say whether the original sound was (ni, nj) or (qi, qj), but from H. it is clear that at the beginning of the xvii th century it was (nj), as now.

Final consonants were usually pronounced, L. 815, and all authorities write them, although we find in P i, 27, "Whan so euer a frenche worde hath but one consonant onely after his last vowel, the consonant shalbe but remissely souned, as *aude, soyf, Al, deavoutp, mot*, shalbe souned in maner *aue, soy, A, deaveous, mo*. how

be it the consonant shall haue some lyttell sounde: but if t or p folowe a or e, they shall haue theyr distinct sounde, as *chat, débt, duedt, combdt, handp, decret, regrét, entremét*; and so of all suche other." These examples cross the modern practice of omission and sounding in several places.

H is a very doubtful letter, B. 805 and note 3. The question is not whether in certain French words *H* was aspirated, but whether the meaning attached to "aspiration" in old French was the same as that in modern French or in English. P. gives a list of 100 "aspirated" words. B. 67 says: "Aspirationis nota in vocibus Græcis et Latinis aspiratis, et in Francicam linguam traductis, scribitur quidem sed quiescit," except *hache, hareng, Hector, Henri, harpe*.

The other consonants present no difficulty. We may safely assume *B*=(b), *C* (k, s), *Ch* (sh), *D* (d), *F* (f), *G* (g, zh), *J* (zh), *suprà* p. 207, *K* (k), *L* (l), *P* (p), *Qu* (k), *R* (r), *S* (s), *T* (t), *V* (v), *X* (s, z), *Z* (z).

The rules for the omission of consonants when not final, seem to agree entirely with modern usage, and hence need not be collected.

Sufficient examples of French phonetic spelling according to M., Pell., and R. have been given in the above extracts. But it is interesting to see the perfectly different systems of accentuation pursued by P. and M., and for this purpose a few lines of each may be transcribed.

From P. i, 63. "Example how the same boke [the Romant of the Rose] is nowe tourned into the newe Frenche tong.

*Maintes gentes dient que en songes
Ne sont que fables et mensonges
Mais on peult tels songes songier
Que ne sont mye mensongier
Ayns sont apres bien apparant, &c.*

*Maintofandiet, kansóvngos
Nesovnkofables e mansongos
Maysóvnpevttezsóvngosovngiér
Kenesovnmýomansovngiér
Aynsovntraprebienapparávnt, &c.*

In M. the accent is illustrated by musical notes; each accented syllable corresponds to F of the bass, and each unaccented syllable to the G below, so that accentuation is held to be equivalent to ascending a whole tone. So far P. agrees with M., for he says (book 1, ch. 56) "Accent in the frenche tonge is a lyftinge vp of the voyce, vpon some wordes or syllables in a sentence, aboue the resydue of the other wordes or syllables in the same sentence, so that what soeuer worde or syllable as they come toguyder in any sentence, be sowned higher than the other wordes or syllables in the same sentence vpon them, is the accent." The following are some of M.'s examples, the accented syllable being pointed out by an acute: "ç'ét mon máleur, ç'et món frere, ç'et món am' é mon éspoux, ç'ét ma grán'mere, ç'ét mon bón compáxon, ór ét fl bon ámy, jé

"Contra verò in vernaculis Gallicis scribitur simul et pronunciatur aspiratio, ut in illis quæ à Latinis non aspiratis deducuntur," and, as to the quality of the sound, he says: "aspirationem Franci quantum fieri potest emolliunt, sic tamen vt omnino audiat, at non asperè ex imo gutturs efflata, quod est magnoperè Germanis et Italis præsertim Tuscis observandum." B. 25. This seems to point to the modern hiatus.

S was constantly used as an orthographical sign to make *e* into *é*, to lengthen *a* and so on. Hence many rules and lists of words are given for its retention or omission, which may be superseded by the knowledge of the modern orthography, with the usages of which they seem precisely to agree.

VOES á TOE, É TOE á MOE, il n'et pas fórt bon, ç'ét vn bién bon báton, món compánon, á vizíon, món cónfrere, vit sájement."

P. constantly admits the accent on the last syllable, M. says it is a Norman peculiarity, which is very disagreeable, and proceeds thus: "il faot premierement entendre qe james l'acçent eleué, ne se rencontr' en la derniere syllabe des dissyllabiques, ne polysyllabiques. E qe le ton declinant ou circonflexe, ne se treuve point q'en la penultime syllabe, si ell' et long' e la derniere brieue, pouruu q' elle ne soet point terminé' en e brief: car alors il y peut auenir diuersité de ton, selon la diuers' assiete du vocable. . . . car il faot entendre qe le' monosyllabes en notre lange, font varier le' tons d' aocuns vocables dissyllabiques, ny n'ont eu' memes aocun ton stable." fo. 133 a.

Palsgrave says: "Generally all the wordes of many sillables in the frenche tong, haue theyr accent eyther on theyr last sillable, that is to say, sounde the laste vowell or diphthong that they be written with, hygher than the other vowels or diphthongues commyng before them in the same worde. Orels they haue theyr accent on the last sillable save one, that is to say, sounde that vowel or diphthong, that is the last saue one hygher than any other in the same worde commyng before hym: and whan the redar hath lyftvp his voyce at the soundyng of the said vowel or diphthong, he shal whan he commeth to the last sillable, depresse his voyce agayne [compare supra p. 181, note, col. 2], so that there is no worde through out all the frenche tonge, that hath his accent eyther, on the thyrd sillable, or on the forth sillable from the last, like as diuerse wordes haue in other tonges: but as I haue sayd, eyther on the very last sillable, or els on the next sillable onely. And note that there is no worde in the frenche tong, but he hath his place of accent certaine, and hath it nat nowe vpon one sillable, nowe vpon another. Except diuersite in signification causeth it, where the worde in writtyng is alone." Book I. chap. lviii.

B. is very peculiar; he begins by saying: "Sunt qui contendunt in Francica lingua nullum esse accentibus locum," which shews, in connection with the diversity of opinion between P. and M., that the modern practice must have begun to prevail. Then he proceeds thus: "Sunt contrà qui in Francica lingua tonos perinde vt in Græca lingua constituent. Magnus est vtrorumque error: quod mihi facile concessuros arbitror quicumque aures suas attentè consuluerint. Dico igitur Francicæ linguæ, vt & Græcæ & Latinæ, duo esse tempora, longum vnum, alterum breue: itidemque tres tonos, nempe, acutum, grauem, circumflexum, non ita tamen vt in illis linguis obseruatos. Acuiunt enim Græci syllabas tum longas tum breues, & Latinos idem facere magno consensu volunt Grammatici, quibus planè non assentior. Sed hac de re aliàs. Illud autem certò dixerim, sic occurrere in Francica lingua tonum acutum cum tempore longo, vt nulla syllaba producat quæ itidem non attollatur: nec attollatur vlla quæ non itidem acuat, ac proinde sit eadem syllaba acuta quæ producta & eadem grauis quæ correpta. Sed tonus vocis intentionem, tempus productionem vocalis indicat . . .

Illa verò productio in Francica lingua etiam in monosyllabis animaduertitur, quæ est propria vis accentus circumflexis." B. therefore seems to confuse accent and quantity, as is the case with so many writers, although he once apparently distinguishes an accented from an unaccented long syllable, thus in *entendement*, he says that although the two first are naturally long, the acute accent is on the second; whereas it would be on the last in *entendement bon*, on account of the added enclitic. He lays down important rules for quantity, and without repeating them here, it will be interesting to give his examples, marking those which he objects to¹. *Wrong* mēstrēssē mēssē fēstē prōphēstē mīserīcōrdē pārōlē. *Right* maitrēssē mēssē faictē prōphētē mīserīcōrdē pārōlē; ie veū, tu veūx, il veūt; veū *votum*, veūx *vota*; beūf beūfs, neūf neūfs, ceūlx, ceūlx; fīt fecīt, fīt fuceret, fūt fuit, fūt esset, eūt habuit eūt haberet, ēst, rōst, tōst, plaist *placet*, plūst *plueret*, ēt *et*, plaīd *contentio iudicialis*, pleūt *placuit*, plūt *pluit*; ie meūr *morior*, tu meūrs *moreris*, meūr *maturus*, meūrs *maturi*, meūrē *matura*, sī iē dī, quī ēst cē. last contains what is now mute *e*, and on the last in all other cases. Both M. and P., make accent to be a rising inflexion of the voice. The French still generally use such an intonation, but it does not seem to be fixed in position, or constant in occurrence upon the same word, but rather to depend upon the position of the word in a sentence, and the meaning of the speaker. In modern French, and apparently in older French (suprà p. 331) there is nothing approaching to the regular fixed stress upon one syllable of every word, which is so marked in English, the Teutonic languages, and Slavonic languages, in Italian, Spanish and Modern Greek. The nature of the stress and the effect on unaccented syllables differ also materially in different languages. In English the syllables following the principal stress are always much more obscure than those preceding it. This is not the case at all in Italian. In Modern Greek, the stress, though marked, is nothing like so strong as in English. Mr. Payne considers that the ancient Normans had a very strong stress, and that the syllables without the stress, and which generally preceded it, became in all cases obscure. With the extremely lax notions which we find in all ancient and most modern especially English writers, on the questions of accent, vocal inflexion, and stress, with its effect on quantity, it is very difficult to draw any conclusions respecting ancient practice. A thorough study of modern practice in the principal literary languages of the world, and their dialects, seems to be an essential preliminary to an investigation of ancient usage.

E. gives 12 dialogues in French and English with the pronunciation of such French words as he considers would occasion difficulty, indicated in the margin. The following list contains all the most important words thus phoneticised. The orthography both ordinary and phonetic is that used by E.

At the close of the xviii th century Sir William Jones (Works 1799, 4to, i, 176) supposes an Englishman of the time to represent "his pronunciation, good or bad," of French, in the following manner, which he says is "more resembling the dialect of savages than that of a polished nation." It is from an imitation of Horace by Malherbe.

Law more aw day reegycwrs aw nool otruh parellyuh,

Onne aw bo law preey:

Law crocellyuh kelay suh boushuh lays orelyuh,

Ay noo laysuh crecay.

Luh povre ong saw cawbawn oo luh chomuh luh couvrub

Ay soozyet aw say lwaw,

Ay law gawrdub kee velly ô bawryayrub dyoo Loovrub

Nong dayfong paw no rwaw!

The interpretation may be left to the ingenuity of the reader, and the orthography may be compared to the following English-French and French English, in Punch's Alphabet of 25 Sept., 1869.

M ay oon Mossoo kee ponx lweemaym tray

Bowkoo ploo bong-regardong ker vraymong ilay!

N iz é Ninglicheman! Rosbif!! Olrai!

Milor! Dam! Comme il tourne up son Nose! O maie aie!!

Since the above pages were in type, I have been favoured by Mr. Payne with a full transcript of that part of the Mag. Coll. Oxford MS. No. 188, (suprà p. 309, n. 1), which contains the 98 rules for French spelling, partially cited by M. F. Génin in his Preface to the French Government reprint of Palsgrave. This MS. is of the xvth century, but the rules appear to have been much older. They incidentally touch upon pronunciation, and it is only those portions of them which need here be cited. The numbers refer to the rules.

E.

"1. Diccio gallica dictata habens primam sillabam vel mediam in E. stricto ore pronunciatum, requirit hanc literam I. ante E. verbi gratia bien. chien. rien. pierre. miere. et similia." Here is a distinct recognition of a "close e," and the examples identify the sounds in *père, mère*, now open, but close according to the orthoepists of the xvth century, with the vowel in *bien, chien, rien*, which therefore tends to confirm the opinion expressed above p. 829, that *en* was not then nasalized in the modern sense. "2. Quando-cumque hec uocalia. E. pronunciatum acute per se stare debet sine huius .I. processione verbi gratia .beuez. tenez. lesez." As each example has two syllables in *e*, it is difficult to say whether the rule applies to one or both and hence to understand the meaning of "acute *e*." The last *e* in each is generally regarded as "masculine," but the first in "beuez, tenez," was the "feminine" and in "lessez" the "open" according to other writers. Nor is this obscurity much lightened by the following rules: "3. Quamvis E. in principio alicuius sillabe acute pronunciatum in fine anterioris sillabe I. bene potest preponi vt bies. priez. lez. affiez &c." Here if *bies* = *biais*, we have the same mixture of masculine and open *e* as before. The two next rules seem to call the "feminine *e*," that is, the modern *e* mute, a "full *e*." "4. Quandocumque adiectivum feminini generis terminat in .E. plene pronuntiata geminabit ee. vt tres honoree dame. 5. Quamvis adiectivum masculini generis terminet [in ?] E plene pronunciatum non geminabit .E. vt tres honore sire nisi ad differenciam vne Comittee anglie a shire. Vu comite anglie a counte 6. Quamvis adiectivum masculini generis non terminet in E. Vt vn homme vient. homme adiectivum tamen feminini generis terminabit in simplici cum

se implere [?] pronunciatum vt meinte femme vne femme." There can be no doubt that *e* feminine was fully pronounced, but how far it differed from the *e* "stricto ore," and *e* "acute pronunciatum," it is not possible to elicit from these curt remarks. It is observable that *eo* and *e* are noted as indifferent spellings in certain words now having the "muto-guttural *e*." "8. Item ille sillabe. ie, ce. ieo. ceo. indifferenter possunt scribi cum ceo vel ce sine o."

S.

"12. Omnia substantia terminancia per sonum .S. debent scribi cum .S. vt signurs lordes. dames ladyes." This plural *s* was therefore audible, but the writer immediately proceeds to point out numerous exceptions where *s* was written for *z*, as 13. in *gent*, plural *gents* or *gentsz*, 14. in *filz*, 15. or *z* for *s* in *deus loialz*, 16. or the common contraction *g* for *us* in *no⁹* = *nous*, 17. in *nos vos* from *noster vester*, either *s* or *z* may be used. In all these cases it would however appear that (s) was actually heard, and if any meaning is to be attached to "aspiration" we must suppose that an (s) was sounded in the following case: "18. "Item quandocumque aliqua sillaba pronunciatum cum aspiratione illa sillaba debet scribi cum s. et t. loco aspiratione verbi gratia est fest pleist." The next is obscure. "19. Item si .d. scribitur post .E. et .M. immediate sequitur d. potest mutari in s." In 21. 93. and 94. we find *s* mute in *fismes, duresme, mandasmes*, and probably by 96. in *feist toust*, and possibly also in: "73. Item in verbis presentis et preteriti temporum scribetur. st. a pres I e. o. v. com baptiste fist est test lust &c.," though this partially clashes with 18.

U after L, M, N.

"23. Item quandocumque hec litera l. ponitur post A. E. et O. si aliquod consonans post l. sequitur l. quasi v. debet pronuciari verbi gratia. malme

mi soule. loialment bel compaignoun." This does not mean that *al*, was pronounced (ay), but that it was pronounced as *au* was pronounced, and this may have been (ao) as in Meigret or (oo) as in other orthoepists of the sixteenth century. With this rule, and not with S, we must connect: "67. Item aliquando s. scribitur et vsonabitur cum ascun sonabitur acun," aucun? as M. Génin transcribes. "36. Item isto sillabe seu dicciones quant grant Demandant sachant et huiusmodi debent scribi cum simplici .n. sine .v. sed in pronunciatione debet .v. proferri &c." This can scarcely mean that *an* was pronounced as if written *aun* with *au* in the same sense as in the last rule cited. It must allude to that pronunciation of *an* as (aun) to which Palsgrave refers and which introduced an English (aun), *suprà* p. 826, col. 1, and therefore confirms the older English accounts.

Oy and E.

"26. Item moy. toy. soy. possunt scribi cum e. vel o. per y. vel i indifferenter. — 58. Item in accusatio singulari scribetur me in reliquis casibus moy." This, together with Barclay's names of the letters, p. 805, is well illustrated by the curious passage from Sylvius, p. 824.

Final Consonants.

"27 Item quandocumque aliqua dictio incipiens a consonante sequitur aliquam diccionem terminantem in consonante in rationibus pendentibus [in connected phrases] consonans interioris diccionis potest scribi. Sed in pronunciacione non proferri vt a pres manger debet sonari a pre manger. — 29. Item l. M. N. R. T. C. K. quamvis consonans subsequitur bene possunt sonari per se vel per mutacionem litere." Does this *mutation* refer to the following? "51. Item scias quod hec litere C. D. E. F. G. N. P. S. et T. Debent mutari in sono in strictura c. ante uocalem vt clerici. clers et debet in gallico clers rudi homines ruds hommes et debet sonari ruz hommes. bones dames debent bon dames et tunc .u. sonari solempne vyfs hounto [homme?] loget vis homme et sic De alijs. — 52. Item quando ista diccio graunt sight magnitudinem adiungitur cum feminino genere ita vt e sit sequens

t. mutatur in D. vt grande dame grande charge." Observe this xvth century use of English *sight* for *great*, as an adjective. — "53. Item quando grant adiungitur masculino generi vt grant seignour vt quando signat confessionem non mutabitur t. in D. quamuis E. sequitur vt iay grante."

GN.

"39. Item quandocumque hec litera .n. scribitur immediate post g. quamuis sonet ante g. non debet immediate prescribi vt significant &c. — 40. Item si .n. sonat g. et non subsequitur bene potest A immediate prescribi. — 41. Item seignour ton seignoursen seignour. — 92. Item quandocumque .n. sequitur I in media diccione in diuersis sillabis g. debet interponi vt certainement benignement &c. sed g non debet sonari." All these seem to refer awkwardly and obscurely to (nj).

GU, QU.

"46. Item qi qe quant consueuerunt scribi per k sed apud modernos mutatur k. in q. concordent cum latino I k. non reperitur in qū qd' quis sed I. — 54. Item post G. vel E. quamuis v scribatur non debet sonari vt quatre guerre. Debent sonari quatre gerre."

Words Like and Unlike.

"50. Item diuersitas stricture facit Differentiam aliquam quamuis in voce sint consimiles verbi gratia ciel seel seal celee ceele coy quoy moal moel cerf serf teindre. tenir attendre [Génin has: teindre tendre tenir attendre] esteant esteyant aymer amer foail fel stal [Génin: feal] veele viel veile ville vill' [Génin: veele viel veile ville vill] brahel breele erde herde euerde easil huissel assel nief neif suef noef [Génin: soef] boaille. baile bale balee litter litere fornier forer forier rastel rastuer mesure meseire piel peel berziz berzi grisil greele grele tonne towne neym neyn." The transcript was made by Mr. Parker of Oxford, but the proof has not been read by the original; Génin certainly often corrected as he edited; here the transcript is strictly followed. — "86. Item habetur diuersitas inter apprendre prendre et rependre oez oeps vys et huys kunyl et kenil. — 90. Item habetur diuersitas inter estreyrn strawe et estreyrn hansel. — 91. Item inter daym et dayn."

These seem to be all the passages bearing upon the present dis-

cussion. They are not numerous, nor very important, nor always very intelligible, but they seem all to point to such a previous state of pronunciation of French, as our English experience would lead us to suppose might have preceded that of the xvith century as so imperfectly colligible from the writings of contemporary orthoepists.

It should also be mentioned that the Claudius *Holyband* whose *French Littelton* is described on p. 227, note, under date 1609, is called *Holliband* in a previous edition of the same book, dated 1566, in the British Museum. This is 3 years before Hart's book, and as this older edition also contains the passage cited *suprà* p. 228, note, saying that the English seem to Frenchmen to call their *u* like *you*, and to name *q* *kiou*, whereas the Frenchmen pronounce like the Scotch *u* in *gud*, while Hart gives *iu* as the English sound, and identifies it with the Scotch and French vowels (see especially p. 796, note, col. 1. [88])—we are again led into uncertainty as to the sound that Hart really meant, and to consider that the (iu) sound, though acknowledged by no orthoepist before Wilkins, may have penetrated into good society at a much earlier period. Again, the confusion of spelling in *Holyband* and *Holliband*, reminds us of Salesbury's identification of *holy* and *holly* (*suprà* p. 779, l. 2 from bottom). And lastly it should be mentioned that this name is but a translation, and that the author's real name, as he writes it elsewhere, is *Desainliens* (under which his works are entered in the British Museum Catalogue) being the same as Livet's de Saint-Lien, or à Santo Vinculo (*suprà* p. 33, l. 8 from bottom). The Latin work there cited is not in the British Museum, but as its date is 1580, and the 1566 edition of the French *Littelton* there preserved does not differ sensibly from that of 1609 here quoted, this occasions no incompleteness in the present collections from French Orthoepists of the xvith century.

§ 4. *William Bullokar's Phonetic Writing, 1580, and the Pronunciation of Latin in the xvith Century.*

Bullokar concludes his *Book at Large* with a prose chapter between two poetical ones. The poetry is so bad that the reader will be glad to pass it over. The prose contains a little information amidst an overpowering cloud of words; and as a lengthened specimen of this important contribution to the phonetic writing of the xvith century is indispensable, I shall transliterate his Chapter 12. There is some difficulty in doing so. Long *a*, *e*, *y*, *o* are lengthened by accents thus *á*, *é*, *ý*, *ó* when they apparently mean (aa, ee, *ii*, oo), and *i* is said to be lengthened by doubling as *iy*, *yi*, when it would also be (*ii*) according to the only legitimate conclusion at which I could arrive in treating of Bullokar's pronunciation of this sound, pp. 114, 817, note. The mention of this combination *iy*, *yi*, which amounts to a reduplication of *i*, although I have not found any instance in which it had been used by Bullokar, and the constant omission of any distinction between long and short *i*, confirm the

former theory that he called long *i* (*ii*). In the present transcript only such vowels are marked long as Bullokar has actually so marked, or indicated by rule, as (*uu*, *yy*). Bullokar's doubled consonants, though certainly pronounced single, have also been retained. Bullokar has also a sign like Greek ζ which he uses for both *s* and *z*, but which he identifies with *s*. It will be transliterated (*s*) or (*z*) according to circumstances. Bullokar's grammatical "pricks and strikes" are entirely omitted. They have no relation to the sound, and are quite valueless in themselves, although he laid great store by them. On the other hand I have introduced the accent mark, for which he has no sign. The title of the chapter is left in ordinary spelling.

ENGLISH PRONUNCIATION OF LATIN IN THE XVIITH CENTURY.

Information respecting this subject is given incidentally by Palsgrave, Salesbury, Smith, Bullokar and Gill. Palsgrave generally illustrates the French sounds by the Latin, "when pronounced aright" (*suprà* p. 59), implying that there was a wrong, and therefore perhaps a usual pronunciation, which is the one we most desire to learn. By combining these authorities the result seems to be as follows.

A aa, a, Æ ee, B b, C k, s, CH k, D d, dh, th, E ee, e, F, f, G g, dzh, GN qn, H h, I ei, i, J dzh, K k, L l, M m, N n, NG qg, O oo, u, OE ec, P p, QU kw, R r, S s, z, T t, th, TH th, U, yy, u, V v, X ks, Y=I, Z z.

¹ By omission of the diacritics, this word is misprinted (lou).

A may have been (a, ɶ, æ), but probably (a) only.

Æ, OE Palsgrave says (i, 10) "be written in latine and nat sounded," i.e. I suppose, not sounded as diphthongs. It seems clear from Smith (suprà p. 121) that the real sound of Æ, and therefore probably of OE, was (ee).

C was (k) before a, o, u and (s) before e, i according to present custom, and probably (s) before æ, œ.

CH=(k) according to Bullokar, suprà p. 842, l. 19.

D. The only proper sound was (d), but we find Palsgrave saying of French D (i, 30): "D in all maner thynges confermeth hym to the general rules aboue rehersed, so that I se no particular thyng wherof to warne the lernar, save that they sounde nat d of ad in these wordes, *adultère*, *adoptiõn*, *adoulcér*, like th, as we of our tonge do in these wordes of latine *ath athjuuandum* for *ad adjuuandum* corruptly." I have assumed this th to mean (dh) as being derived from d. But Salesbury writes (kwith) for *quid*.

E. Besides the regular sound of (ee, e), Salesbury shews that (ii) had crept in occasionally, compare (liidzh· it)=*legit*, p. 767. I do not find this mentioned by any other authority.

G=(g) before a, o, u and (dzh) before e, i, as at present. Both Salesbury and Bullokar note and stigmatise the use of (qn) for GN, which seems to have been in general use.

I short =(i) throughout. I long =(ei) in Salesbury, (ei) in Gill most probably. Whether Bullokar said (ii) or (ei) depends on his English pronunciation of long I. It is to be observed that he as well as Smith (p. 112), does not admit the sound of (ii) in Latin. Hence Bullokar's sound of long i must have been quite distinct from (ii), as (ii, ii) are at this day kept quite distinct in Iceland and Teviotdale, in both cases perhaps by inclining (ii) towards (ee), p. 544.

T, usually (t), but when final often (th) as (am·ath) *amat*, according to Salesbury, see D. Palsgrave also finds it necessary to say, in reference to the French word *est*: "if the next worde folowyng begyn with a vowell, it shall be sounded *et*: but neuer *est* sounding s, nor *eth*, soundynge t like th, for t hath neuer no suche sounde in the frenche tonge," (i, 44), which seems to be directed against this Latin usage.

TH=(th) see suprà p. 842, l. 19.

U vowel, when long seems to have been generally (yy) suprà p. 841. But Palsgrave seems to consider this wrong, and to prefer (un), suprà p. 149. The short vowel could have been nothing but (u, u).

EXAMPLES.—Latin spelling in Italics, pronunciation in Roman letters.

Salesbury gives: *agnus* aq·nus, *amat* am·ath, *dederit* ded·er·ith, *dei* dee·ei, *dico* dei·ku, *ego* eg·u, *ignis* iq·nis, *Jesu* Dzhee·zyy, *legit* li·dzh·ith, *magnus* maq·nus, *qui* kwei, *quid* kwith, *sal* saul, *sanctus* san·tus, *sol* sooul, *tibi* tei·bei, *tollis* tooul·lis, *tu* tyy, *vidi* veidei, but objects to every one of these pronunciations.

Bullokar writes, translating his symbols literatim: *Cicero rheto-*

rica singulos vicit, Sis'ero rethor'ika siq'gyylooz vi'sit, corvus non voce cucullum kor'vus non vo'se kyykul'lum, p. 4. Georgius Gigas et Gilbertus gerunt gladium ad extinguendum gibbum gerinantem in gula Dzheordzhius Dzhi'gas et Gilbertus dzherunt gladi'um ad ekstiqguen'dum gib'bum dzherminan'tem in gyy'la, p. 5. Injustus jejumat jactuosè non juxta juramentum Johannis indzhus'tus dzhe-dzhyy'nat dzhaktyo'ze non dzhuks'ta dzhyyramen'tum Dzho'han-nis p. 5. Invisus miser non delectatur placidis musis invi'zus mi'zer non delekta'tur plas'idis myy'zis, p. 6. Vitiosi judicium fugiunt ob punctionem stultitiæ suæ visio'zi dzhyydis'ium fyy'dzhiunt ob pyyni-sio'nem stultis'tee syy'ee. Unus vestrum cumularit hunc acervum yy'nus ves'trum kyymyyla'vit huqk aser'vum, p. 7. Thraso, Thales, Thessalia, Thra'so, Tha'les, Thessa'lia. Ignarus, magnus, lignum, igna'rus, maq'nus, liq'num. Bullokar in these examples has neglected to use his accents which mark length.

Gill writes a few Latin names thus, the numbers refer to the pages of his *Logonomia*: *Julius Cæsar* Dzhyy'lius Se'zar 43. *Cicero* Siz'eroo 43, 85. *Terentia* Teren'tia 84. *Crassus* Kras'us 85. *Hippia* Hip'ia 85. *Sylla* Sil'a 85. *Quintius* Kwin'sius 86. *Venus* Ven'us 100. *Cynthia* Sin'thia 101. *Phoebe* Fee'be 101. *Charissa* Karis'a 101. *Corydon* Kor'idon 103. *Pyrocles* Pirook'les 108.

The use of (ei) for long I, seems to guarantee the old use of (ii), which may have been Bullokar's pronunciation. And the use of (yy) for long U, seems to confirm the conjecture of its old use in the same sound, *suprà* p. 246, rather than (uu), because as (ii) changed into (ei), so would (uu) have changed into (ou), whereas (yy) is naturally preserved. This confirms to some extent the remark on p. 583, note 8. The only other important point is the non-development of *si-*, *ti-* before a vowel, into (shi-), hereby confirming the absence of this development in English, *suprà* p. 214.

§ 5. *Alexander Gill's Phonetic Writing, 1621, with an examination of Spenscr's and Sidney's Rhymes.*

Dr. Gill, born in the same year as Shakspeare, and occupying the high literary position of head master of St. Paul's School, London, at the time of Shakspeare's death, must obviously be considered as the best single authority for the pronunciation of the more educated classes in Shakspeare's lifetime. Hence it is necessary in these examples to give prominence to what has fallen from his pen. We have had frequent occasion to lament that Dr. Gill has not explained the value of all his signs with sufficient clearness. The reasons why I suppose his *j* to have been (æi), and his *d* and *au* to have been (AA) will be found on pp. 115, 145.

The greatest difficulty in transcribing Dr. Gill's phonetic passages arises from the carelessness of the printing. Dr. Gill has furnished a list of Errata, which he requests may be corrected before reading, but in some instances these contain no corrections at all, and they

are exceedingly deficient. The commencing and concluding observations create difficulties :

"Syllabæ quæ naturâ suâ communes sunt, possunt etiam indifferenter per vocales longas aut breves describi, vt (shal) aut (shaal), (dans) aut (daans), (bi bii, ded deed, whoom whuum, modher, mudher, sai saai, mai maai, &c.) Quædam accentu variant, vt ibi dictum est : itaque in his nil titubabis. Errata leuiora præteribis : cognita et agnita sic restitues. Quinetiam characterum penuriam in I, pro J, quoties opus refarcies. Denique capite 25 et deinceps, accentuum notatio, longarum vocalium quantitati veniam inueniet."

It is evident that owing to these errors much doubt must be felt by a reader of the XIXth century on many of the very points respecting which precise information is desirable. I had endeavoured to correct errors by a reference to other occurrences of the same word. But after much consideration I determined to give a literal transcript of the text as it stands, as I have done for Hart and Bullokar, correcting only the errors marked in the errata and supplying the accent mark (·), so that the reader will be able to form his own opinion. I have used (i) for the short *i*, believing it to have been the sound intended by Dr. Gill. See also § 7 of this Chapter. But I have let (i) stand for short *i* when it appeared to be a misprint for *i*=(ii).

Almost the only examples of phonetic writing as such, given by Dr. Gill, are Psalms 62, 67, 96, 97, 104 according to the Authorized Version, and as that version had only been published ten years when his book appeared, these transcripts possess a peculiar interest and are given at length.

The poetical examples are chiefly adduced to give instances of rhetorical figures, and are principally taken from Spenser and Sidney,—not one line from Shakspeare being quoted throughout the book, which need not excite surprise, as the first folio edition of Shakspeare's plays did not appear till two years after the publication of Gill's second edition. There are a few epigrams from Harrington, a poem of Withers, a song of Ben Jonson, and one or two other songs cited. I have thought it best to give all the longer quotations from Spenser's *Faerie Queen* in the order in which they occur in the poem, and to collect the other quotations according to the authors. We have thus a very tolerable collection of literary examples differing materially from the dry sticks furnished by Hart and Bullokar. Their main interest, however, consists in their being written phonetically by a man who was contemporary with nearly all the writers, and who therefore was able to furnish us with the pronunciation of English current in their time. We shall not go far wrong if we read like Dr. Gill. At the same time he clung to the older form of pronunciation, not admitting Harts (ee) for *ai*, although he does allow (deseev', konseev') which were the current pronunciations of the XVIIth century, and apparently admitted (oi, aa) which properly also belong to that period. It will

be found that his quotations from Spenser often differ from Mr. Morris's (Globe) edition, sometimes designedly, sometimes perhaps from carelessness.

How far Dr. Gill's pronunciation represented that of Spenser, Sidney, and the other authors themselves, is an interesting question; but there is no direct means of answering it. The only path open is an examination of their rhymes. Accordingly Spenser's and Sidney's rhymes will be considered immediately after the specimens which Gill has given. And in the last section of this chapter not only Shakspeare's rhymes, but also his puns will be examined for the purpose of determining his individual pronunciation.

Extracts from Spenser's Faerie Queen.

The references are to the book, canto, and stanza of the F. Q., and to the page of Gill's *Logonomia*.

Praiz jii dhe Lord. Amen

AN EXAMINATION OF SPENSER'S RHYMES.

An inspection of the examples of Spenser's pronunciation as given by Dr. Gill, pp. 847-852, shews that as Dr. Gill read them the rhymes were not unfrequently faulty.¹ If then this authority is to be trusted we have entirely left the region of perfect rhymes, and have entered one where occasional rhymes are no guide at all to the pronunciation, and very frequent rhymes are but of slight value. Still it seemed worth while to extend the comparison further, and see how far Spenser in his rhymes conformed to the rules of pronunciation which we gathered from contemporary authorities in Chap. III. Before, however, giving the results of an examination of all the rhymes in the *Faerie Queen*, I shall examine the bad rhymes in contemporary poems of considerable reputation, in order that we may see and understand what limits of approximation in the sound of rhyming vowels and even consonants, some of our best versifiers deem to be occasionally or even generally sufficient, that is, how closely they approach to final or consonantal rhyme (p. 245) on the one side, and assonance on the other. For this purpose I have selected Thomas Moore and Alfred Tennyson. Every one admits that Moore was at least a master of the mechanical part of his art. His lines are generally rhythmical, and his rhymes good, as might be expected from a song writer with a delicate perception of music. Of his writings I choose the most elaborate, the *Loves of the Angels*, and *Lalla Rookh*, and note all the rhymes which are false according to my own pronunciation. Of Tennyson, who is also a master of his art, I select the *In Memoriam*, as his most careful production in regular rhymed verse, and do the like with it. The following are the results.

Mode of Reference.

FW 1, 2 Fireworshippers, part 1, paragraph 2.

LA prol., Loves of the Angels, prologue. LA 2, 8. Do., story 2, paragraph 8.

LH 6, Light of the Harem, paragraph 6.

PP 24, Paradise and the Peri, paragraph 24.

VP 3, 17, Veiled Prophet, part 3, paragraph 17.

T 28, Tennyson's In Memoriam, section 28. Tep. Do. epilogue.

The examples are arranged according to the sounds, which, according to my pronunciation, are different, but must have been identical, according to the pronunciation of the poets, if the rhymes are perfect.

Faulty Rhymes observed in Moore and Tennyson.

Some of these rhymes, as may be seen, are justifiable by diversities of pronunciation. Others are really rhymes of long and short vowels. But others cannot be made into rhymes with the help of any known received pronunciations. Thus:—1) bar war, guard lord, clamber chamber, amber chamber, have grave, heaven given [very common], heaven even [also common], death beneath, death sheath, &c. [common], earth forth, one gone, rough off, above grove, come home [very common], love grove &c., one alone &c., blood, good &c., flood stood &c., thrush push, blood food, come tomb, love move &c., curse horse, word lord [so that as we have: guard lord, we might have: word guard!] word sword, Christ mist, I joy, brow below, down grown &c., now low, loss gross, lost boast &c., mode good, hope group:—2) breathe wreath, breathes sheaths, bliss his, else tells, house s. boughs &c., ice flies &c.—are about as bad rhymes as can be, the first division being purely consonantal rhymes, and the second mere assonances. The rhymes of an unaccented and accented syllable are all bad, but the double use of unaccented final *-y*, *-ies*, to rhyme either with (-ii, -iiz) or (-oi, -oiz) at the convenience of the poet is really distressing; compare I, agonies sees; energies cries, energies ease; harmony die, harmonies breeze; mysteries replies, mysteries these &c. It is at once evident that any attempt to derive the pronunciation of the *xix*th century from an examination of modern rhymes must utterly fail.

Now the extended examination of Spenser's rhymes above named, leads to a similar result. It would not only be impossible from them to determine his pronunciation, but his usages cross the known rules of the time, even if we include Hart's varieties, so multifariously, that the poet was evidently hampered with the multiplicity of rhyming words which his stanza necessitated,¹ and became careless, or satisfied with rough approximations.

The language in which he wrote was artificial in itself. It was not the language of the *xvi*th century, but aped, without reflecting, that of the *xv*th. The contrast between the genuine old tongue of Chaucer, or modern tongue of Shakspeare, and the trumped up tongue of Spenser, which could never have been spoken at any time, is painful. Coming to the examination of Spenser's rhymes fresh from those of Chaucer, the effect on my ears was similar to that produced by reading one of Sheridan Knowles's mock Elizabethan English dramas, after studying Shakspeare. It is sad that so great a poet should have put on such motley.

¹ The scheme of his rhymes is *a b a b b c b c c*, necessitating 2, 3, and 4 rhyming words.

Sometimes, either the author or the printer,—it is impossible to say which, but in all subsequent citations I follow Mr. Morris,¹—seems to think he can make a rhyme by adopting an unusual spelling. At other times unusual forms of words, long obsolete or else provincial, are adopted, and different forms of the same word chosen to meet the exigencies of the rhyme.

Occasionally, but not very often, Spenser indulges in unmistakable assonances, or mere consonantal rhymes, or anomalies, which it is very difficult to classify at all, as in the following list.

Anomalies, Eye Rhymes, Assonances.

mount front 1, 10, 53.

fyre shyre conspyre yre 1, 11, 14 [here
shyre was a mere rhyme to the eye.]

away decay day Spau 1, 11, 30.

bath wrath hat'th = *hatheth* hath 2, 2, 4.

bough enough 2, 6, 25 [where *enough*
is quantitative and not numerative.]

mouth drouth couth = *could* 2, 7, 58.
[eye-rhymes.]

towre endure sure 2, 9, 21. [conso-
nantal rhyme.]

deckt sett = *decked set* 2, 12, 49. [an
assonance.]

Chrysogonee degree 3, 6, 4, [but] Chry-
sogone alone gone throne 3, 6, 5.
[the very next stanza, whereas the
former spelling is reverted to in 3,
6, 51.]

nest overkest = *overcast*, opprest 3, 6, 10.

more store yore horrore = *horror* 3, 6, 36.

stayd strayd sayd denayd = *denied* 3,

7, 57. day tway denay = *deny* dismay
3, 11, 11.

gotten soften often 4, intr. 5. [an
assonance.]

health wealth deal'th = *dealeth* stealth

4, 1, 6. [this may only be a long and
short vowel rhyming.]

maligne benigne indigne bring 4, 1, 30.
[even if -igne is pronounced (-ign),
as occasionally in Gill this will only
be an assonance.]

follie jollie dallie 4, 1, 36.

evill drevill devill 4, 2, 3. [even when
the two last words rhymed, as they
were usually spelled, as *drivel* *divel*,
they only formed consonantal rhymes
with the first, and the spelling seems

to have been changed to make an
eye-rhyme.]

yborn morne morne werne = *weren* 4,
2, 41. [see above p. 858, note.]

mid hid thrid = *thread* undid 4, 2, 48

emperisht cherisht guarisht florisht 4,

aimed ordained 4, 4, 24 [assonance]

ventred = *ventured* entred = *entered* 4,
7, 31 [this would have been a rhyme
in the xviith century.]

dum = *dumb* overcum mum becum =
become 4, 7, 44, [here the spelling
seems unnecessarily changed, the
rhyme being, probably, good.]

fourre paramoure 4, 9, 6 [consonantal
and eye rhyme]

wount = *wont* hunt 5, 4, 29. [change of
spelling probably used to indicate
correct pronunciation, compare]
wount hunt 6, 11, 9.

neare few 5, 4, 37 [this may be con-
sidered as an assonance, (neer feen),
which takes off much of the harsh-
ness apparent in the modern (niir
fin).]

grovell levell 5, 4, 40

warre marre darre farre = *war mar*
dare far 5, 4, 44, [the spelling ap-
parently altered to accommodate
dare, which had a long vowel, the
others having short vowels]

thondred sondred encombred nombred
5, 5, 19, encomber thonder asonder

6, 5, 19, [assonance]

endeavour labour favour behaviour 5, 5,

- 35 [part assonance, part consonantal rhyme.]
 attend hemd = *hemmed* kemd = *kempt*
combed portend 5, 7, 4, [assonance,
 it is curious that *kemd* was unnecessarily forced in spelling.]
 discover lover endever ever 5, 7, 22
 [consonantal rhyme].
 stronger longer wronger = *wrong doer*,
 5, 8, 7. [Did Spenser say (*stroq'er*
rwoq'er), or (*stroq'ger*, *rwoq'ger*),
 or did he content himself with an
 assonance? I lately heard (*siq'gi*)
 from a person of education.]
 desynes betymes crymes clymes = *designs*
betimes crimes climbs 5, 9, 42. [as-
 sonance.]
 tempted consented invented 5, 11, 50.
 [assonance.]
 washt scracht = *washed scratched* 5, 12,
 30. [assonance.]
 roade glade = *did ride, glade* 6, 2, 16.
 [consonantal rhyme.]
- most ghost host enforst = *enforced*, 6,
 3, 39. [not only are the consonants
 different in the last word, but the
 vowel is probably short and not long
 as in the others.]
 queason reason season seisin 6, 4, 37.
 [With the last rhyme compare Sales-
 bury's *seesyn* (*sceez'in*) for *season*,
 p. 783.]
 maner dishonor 6, 6, 25.
 hideous monstrous hous battailous 6,
 7, 41. [consonantal or eye rhyme,
 unless Spenser called *hous* (*hus*).]
 live v. give drive thrive 6, 8, 35. [con-
 sonantal or eye rhyme]. forgive drive
 live v. grieve 6, 9, 22.
 alone home 6, 9, 16. [assonance.]
 wood stood bud aloud flud = *flood* 6, 10,
 6. [Did Spenser, like Bullokar, say
 (*aluud*?)?]
 turne mourne learne 6, 10, 18. [con-
 sonantal rhyme.]

The above examples, which it does not require any historical knowledge to appreciate, are amply sufficient to prove that Spenser allowed himself great latitude in rhyming, so that if we find him continually transgressing the rules of contemporary orthoepists, we cannot assume that he necessarily pronounced differently from all of them, or that he agreed with one set rather than another. When however we come to examine other words which he has rhymed together, where his rhymes, if they could be relied on would be valuable orthoepical documents, we find not only apparent anticipations of usages which were not fixed for at least a century later, but such a confusion of usages that we cannot be sure that he was even aware of these later pronunciations. Hence his rhymes not only do not shew his own custom, but they do not justify us in supposing that the more modern practice had even cropped up in stray cases. The principal conclusion then to be drawn from such an examination is that we have left the time of perfect rhymes, exemplified in Chaucer and Gower, far behind us, and that beginning at least with the xvith century we cannot trust rhymes to give us information on pronunciation. The previous examination of the rhymes of Moore and Tennyson shew that the same latitude yet remains. The esthetic question as to the advantage of introducing such deviations from custom does not here enter into consideration. But it would seem sufficiently evident that they arose at first from the difficulty of rhyming,¹ and there is no doubt that they remain in the majority of cases for the same reason. Their infrequency, and the mode in which they are generally disguised by orthography, or apparently justified from old usage, would seem to imply that the poet did not in general consciously adopt them, as musicians have adopted and developed the use of discords, in order to produce a

¹ See what Chaucer says, *supra* p. 254, note 2.

determinate effect. Hudibras is of course an exception, and all burlesque poems, where the effect intended is evident and always appreciated, but is not exactly such as is sought for in serious poems.¹ The following examples from Spenser may seem over abundant, but the opinion is so prevalent that old rhymes determine sounds, and Spenser's authority might be so easily cited to upset the conclusions maintained in the preceding pages on some points of importance, that it became necessary to show his inconsistency, and the consequent valuelessness of his testimony, by extensive citations. The arrangement as in the case of the modern poets is by the sounds made equivalent by the rhymes, but Dr. Gill's pronunciation, as determined by his general practice is substituted for my own. At the conclusion a few special terminations and words are considered, which I could not conveniently classify under any of the preceding headings.

¹ Those who wish to see the ludicrous and consequently undesirable effect which is often produced by such false rhymes, should consult a very amusing book called: *Rhymes of the Poets by Felix Ago*. (Prof. S. S. Haldeman), Philadelphia, 1868. 8vo. pp. 56. These rhymes are selected from 114 writers, chiefly of the XVIIth and XVIIIth centuries, and were often correct according to pronunciations then current. The following extract is from the preface: "*It is better to spoil a rhyme than a word.* In modern normal English therefore, every word which has a definite sound and accent in conversation, should retain it in verse; *great* should never be perverted into *greet* to the ear, *sinned* into *signed*, *grinned* into *grind*, or *wind* into *wind*" (wind, wind). "A few words have two forms in English speech, as *said*, which Pope and Th. Moore rhyme with *laid* and *head*; and *again*, which Shakespeare, Dryden, and Th. Moore rhyme with *plain* and *then*, and Suckling with *inn*." "The learned Sir William Jones is the purest rhymer known to the author, questionable rhymes being so rare in his verse as not to attract attention. His *ARCADIA* of 368 lines has but *forlorn* and *horn*; *god*, *rode*; *wind*, *behind*; *mead*, *reed*

(*mead* of *meadow* being *med* and not *meed*). In a foot note he cites the rhymes: *mead* head, *meads* reeds *Dryden*, tread head *Herrick*, *mead* reed *Johnson*. "*CAISSA* of 334 lines, *SOLIMA* of 104, and *LAURA* of 150, are perfect. *THE SEVEN FOUNTAINS*, of 542 lines, has only *shone*—*sun*, and *stood*—*blood*. *THE ENCHANTED FRUIT*, 574 lines, has *wound*—*ground* twice, which some assimilate. The few questionable rhymes might have been avoided; and these poems are sufficiently extended to show what can be done in the way of legitimate rhyme. Versifiers excuse bad rhymes in several ways, as Dr. Garth [A.D. 1672-1719]—

Ill lines, but like ill paintings, are allow'd
 To set off and to recommend the good:
 but it is doubtful whether the Doctor would thus have associated *allow'd* and *good*, if he could have readily procured less dissonant equivalents. Contrariwise, some authors make efficient use of what to them are allowable rhymes, and much of the spirit of Hudibras would be lost without them.

Cardan believ'd great states depend
 Upon the tip o' th' Bear's tail's end;
 That, as she whisk'd it t'wards the Sun,
 Strew'd mighty empires up and down;
 Which others say must needs be false
 Because your true bears have no tails!
 —Butler."

As Spenser's contemporary, Sir Philip Sidney apparently read *ai* as (ee) in *Hart*'s fashion, see below p. 872, Spenser may have adopted this pronunciation also, and then his rhymes of *ai*, *a*, were faulty. fashion.

On account of the laxity of Spenser's rhymes it is impossible to say whether this was a rhyme or an assonance, that is, whether the *-tion* was pronounced as *-shion*. I am inclined to think not. See the remarks on Shakspeare's rhyme: passion fashion, below § 8.]

Sir Philip Sidney's Rhymes.

Gill cites several passages from Sir Philip Sidney (A.D. 1554-86) who was the contemporary of Spenser (A.D. 1552-99). Mr. N. W. Wyer has kindly furnished me with a collection of rhymes from Sir Ph. Sidney's version of the Psalms, which I have arranged as follows. It will be seen that Sidney was a more careful rhymist than Spenser. But he seems to have accepted the mute *gh*, Hart's pronunciation of *ai* as (ee), the inexpediency of distinguishing (oon) and (oo), and the liberty of making final *-y* (= *i*) rhyme with either (ii) or (ei). His other liberties are comparatively small, and his imperfect rhymes very few. In the following list the numbers refer to the numbers of the psalms in which the rhymes occur. The arrangement is not the same as for Spenser's rhymes, but rather alphabetical.

Apparently imperfect Rhymes.

Cradle able 71, is a mere assonance. Hewne one 80, is difficult to understand, unless *hewn* like *shewn*, had occasionally an (oo) sound.

Abandon random = *random* 89, the imperfection is here rather apparent than real, as *random* is the correct old form.

Proceeding reading 19, it is very possible that in *precede*, *succeed*, *proceed*, the *e* was more correctly pronounced (ee), or at least that a double pronunciation prevailed. See Spenser's rhymes, p. 868, col. 1, under (ee) = (ii).

Share bare ware = *wear* 35, this must be considered a real bad rhyme.

A.

Long and short: am game 22, am came 37, forsake wrack 37, inviolate forgate estate 78, tary vary 71, grasse place 37, hast last 9, barre are 82, farr are 88, 103, past haste 88, wast = *waste* plast 31, plac'd hast 5. 8, plast fast 31, cast defast 74, tast caste 18, oreicast tast 16, hath wrath 2.

Have rhymes with: grave 5. 16, crave 16, save 28. 33, wave 72.

W does not affect the following *a*, in: wast last 9, was passe 18, flashed washed 66, quarrell apparrell 89, wander meander 143.

AI.

Uncertain, (ai) or (ee): praies = *preys* staics tay say ay 28, afraid laide 3.

Probably imperfect, ai = (aa): praise phrase 34, repaire are 91.

Nearly certain ai = (ee), since even Gill writes *conceit* with (ee), though he admits (ei, ee) in *they obey*: they saye 3, conceite waite 20, waite deceite 38, conceite seate 40, obey daie 45.

Quite certain ai = (ee), seas laies 33, sea survey 72, sea way 136, praise ease 10, daies ease 37, pleased praised 22, praise please waies raise 69, staine cleane 32, meane vaine 2, chaine meane 28, streames claims 32, waite greates 26, waiteth seatheth 1, disdayning meaning 37, bereaves glaives leaves 78, heyre were 90, and hence: aire heire 8, while the rhyme ai = (e) in *plaint lent* 22 strongly confirms the belief that the above were natural rhymes to Sidney's ear, and consequently the co-existence of (ai, ee) for the sound of *ai* in the XVIth century among polite speakers, notwithstanding Gill's denunciation.

AU, AW.

The following few rhymes do not establish anything, but they serve to confirm the orthoepist's dictum of the development of (ū) after (a) when (l) or (n) follows: crawl'd appal'd 74, shall appall 6, all shall 2, vaunting wanting 52, chaunces glances 52.

E.

Probably Sidney said (frend) and not (friind) *suprà* p. 779, as in: frend wend 38, frend defend 47.

EA.

The confusion of *ea* and *e* short in spelling, and the rhymes of similar orthographies, confirm the general pronunciation of *ea* as (ee): greater better 71, greates sett 21, greates seate 48, distresse release 74, encrease oppress 25, rest brest neast 4, head spread 3, tread leads 1, leade tread 25, treadeth leadeth 84, seate freat 100. 102, encrease prease 144, pearced rehearsed 22, break weak, 2.

The influence of *r* is felt in the following words, where *ea* or *e* would be naturally pronounced (ee), but was undoubtedly at times (ii), p. 81, and poets may have taken the liberty of using either pronunciation as best suited their convenience: heere teare, 55, here nere 91, deere heare appeare 20, heare appeare 6. 57, eare feare appeare where 55, appeares yeares endcares speares 89, neere cleere 34, there heare 102, beare there 55, feare bear 34, beare were 22, deere were beare cleare 55, beare wcare = were 43, care outbeare appeare were cheere feare weare 49, sphere encleare 77, heire forbear mere speare 55.

ER.

The rhymes: heard barr'd 34, guard heard 116, which certainly corresponded to a prevalent, though not generally acknowledged pronunciation, properly belong to the same category as: parts harts = hearts 12, avert heart 51, desert part hart 6, avert hart 119, preserved swarved 37, art subvert 100. 102. See *suprà* p. 871, c. 1, under *heard*.

EU, EW, IEW, U.

These all belong together. The orthoepical distinctions (yy, eu) seem to have been disregarded. Whether they were sunk into (iu, ju) cannot be determined, and is perhaps not very likely at so early a period. See however the remarks on Holyband's observation in 1566, *suprà* p. 838: true adieu 119, view pursue 46, ensue grew new view 60, pursue dew new 105, you pursue 115, you true renewe 31, renew ensue you 78, knew true rue 18, new you 96, grew imbrue 78, subdue brew 18, chuse refuse 89.

GH.

We know that the guttural was only faintly pronounced (*suprà* p. 779) although even Hart found it necessary to indicate its presence by writing (x). The poets of the xvth century however generally neglected it in rhyming as: prayeng *weighing 130, waigh alway alley stay 55, pay weigh 116, surveying waighing 143, day decay stray waigh 107, laide weighd 103, delighted cited 1, sprite wight 9, sight quight 25, quite sight spight light 69, wight quite 39, bite spight 3, sprite might 13, high thy 43, high awry 119, eye high 131, I high 46, high dy cry 9, though goe 43, wrought thought caught 9, aloft wrought 77.

GN.

After a vowel the *g* appears to have been regularly mute as: Assigned kind find minde 44, assigned enclined 11, remaineth raigneth 3.

I.

There was probably some little uncertainty in the pronunciation of *i* in the following words, as we know that Gill had great doubts concerning *build*: build shield 35, shield fil'd yeeld 28, field reconcil'd 60, theevery delivery 75, give relieve greeve 82.

The uncertainty of the final *-y*, which Gill gives both as (ei) and (ii), is shewn by the following examples which are quite comparable with Spenser's, p. 869, col. 1.

High apply perpetually 9, unceasantly cry 77, eye effectually 115.

Sacrifice ly 4, magnify hie 9, fly slippery 35, misery supply 79, memorie flie I orderlie 50, injuries suffice applies lies 58, memory relye 105;—but: be chivalry 20.

Jollity eye 31, jolities tiranize 94, veritie lie 31, verity hie 57, ly iniquity 10, high vanity lie 4, high try equity 6;—but: infirmity me 41, see vanity 39, equity me thee 4, be vanity 39, thee eternity 21, be iniquity he 36, bee thee see degree me treachery free enemy 54, be constancy 34.

L.

It would seem that the practice of omitting *l* in *folk*, was at least known, if not admitted, by Sidney, as he rhymes: folk cloak 28, folkes invokes 32,

O.

The following rhymes all point to the pronunciation of long and short *o* as (oo, o) and not as (oo, ɔ): crossed engrossed 69, coast hoast 33, ones bones 42, one alone moane 4, mones ones 74, none bone 109, therefore adore 66, borne scorn 2, floore rore 96, abroad God 10, God load 67, upon stone 40, folly holy 43, sory glory 42.

The following imply that *o* was also occasionally pronounced as (uu) or (u), though the three last rhymes were more probably imperfect: approve love 1, love move 12, moved behoved 20, love above grove remove 45, doe unto 119, begunn undunn down 11, become dumb 38, sunn done 79, slumbered encombered 76, punished astonished 76, dost

unjust 77, sprong tongue 8, wrong flong 46, flong song 60, strong dunge 83.

OI.

The rhymes here are insufficient to convey much information, yet perhaps they rather imply (oi) than (ui): anoid enjoy'd 81, destroi'd anoi'd 10.

OO.

This is used rather uncertainly, as (uu, u) and even as rhyming to (oo): good blood 9, brood bloud 57, poore more 69, wordes boordes affordes 78, lord worde 50. The rhyme: budds goodes, is strongly indicative of the old pronunciation of *u* as (*u*) without any taint of the xviith century (*o*).

OU, OW.

The following are quite regular as (ou): wound undrownd 68, wound bound found 106, power hower = *hour* 22, thou bowe 99, thou now 100.

In: thou two 129, yours towres 69, the older sound of (uu) seems to have prevailed, and in: mourn turn 69, us glorious 115, such touch much 35, we have the regular short (u), belonging to the same class.

In: could gold 21, would hold 27,

we have the same curious emancipation of *ou* from this category that was observed in Spenser, p. 872, col. 2, and is still occasionally met with, as I have heard it in use myself.

In: soule rowle = *roll* 26, soule extoll 103, we have apparently the regular action of *l* on *o* long to produce (oo), but the following rhymes shew that even if the (u) had not been developed the rhyme would have been permissible: know so 72, unknown ons 10, knowers aftergoers 85, alone unknown none forgone 44, flowes inclose 105, blows foes 3, showes goes 10, bestoe goe 100, throw show goe 18, woe goe show; woe row show 107, repose growes 62, woe growe 41, own one 16—and the rhyme: owner honor 8. 37, in connection with these, shews how indifferent the long and short sounds of *o* were to the ear of a rhymist.

S.

In: this is 10, is his misse 11, is misse 115, blisse is 4, rased defaced 79, we have a confusion of (*s*) and (*z*), but in: presence essence 68, sacrifice cries 50, sacrifices sizes 66, the rhymes may have been pure. In: sent patient 6, we have an indication of *si*-untransformed into (sh).

§ 6. Charles Butler's *Phonetic Writing*, and list of Words Like and Unlike, 1633-4.

The indistinctness with which Butler has explained, and the laxity with which he apparently denotes his vowels, have occasioned me considerable difficulty in attempting a transcription of his phonetic writing. But inasmuch as he has printed two books of fair dimensions, his *Grammar* and his *Feminine Monarchy*, in his own character, so that he is the most voluminous phonetic writer with whom we have to deal, it was impossible to pass him over, and I have therefore endeavoured to transliterate a short passage from his *Feminine Monarchy* or *History of Bees*, 1634, which was printed in the ordinary as well as well the phonetic orthography. The vowel system is, so far as I can understand it, more truly of the xviith century than even Dr. Gill's, and therefore this is the proper place for it, although it was published after the first third of the xviith century. At the conclusion are annexed some extracts from his List of Words Like and Unlike, in his own orthography, using italics to represent his variants of old forms. In the following extract probably (*i*) should be read for (*i*), but the whole vowel system is too uncertain to insist upon such minute distinctions.

Extract from Butler's FEMININE MONARCHY, p. 2-4.

INDEX OF WORDS LIKE AND VNLIKE.

“Soom words of lik' sound hav' different writing: as soon *filius*, SUN *sol*: soom of lik' writing hav' different sound: as a mous *mus*, MOUS *strues* pl. of MOU: soom of like sound and writing differ in *de* accent: as PRÉCÉDENT *præcedens*, PRÉCÉDENT *exemplum quia præcedit*: and soom of lik' sound, writing, and accent, differ yet in signification: *wie den* must bee discerned by the sens of *de* words precedent and

subsequent: as EAR *auris*, EAR *spica*, to EAR *aro*: werc' EARABLE arailis. Of *wic* sorts you hav' hereafter oder examples."

The object of the list which is thus introduced by the author seems to be to discriminate words of like sound as much as possible by various spellings, which in Butler's system would represent different but nearly identical sounds. The list therefore is not of much value or assistance, especially as the like and unlike words are not inserted separately. He seems to have trusted to an orthography which is extremely difficult to understand from his description. Hence instead of giving the whole list, 28 pages long, it will be sufficient to extract those parts in which some mention of pronunciation is made, and for these to adopt the author's own orthography, as in the above citation, because of the difficulty of interpreting it. The italic letters represent generally simple varieties of ordinary types, thus, *oo*, are joined together, forming one type, and so for *ee*, and *e*, *d*, &c., have bars through them, *t* is *ʒ*, a turned *t*, and so on. These will occasion no difficulty. The final (') answers to mute *e*. It is the value of the simple vowels and digraphs and the effect of this mute (') as a lengthener, which it is so difficult to determine satisfactorily from Butler's indications. The small capitals indicate the usual orthography and generally replace Butler's black letters.

§ 7. *Pronouncing Vocabulary of the Sixteenth Century, collected from Palsgrave 1580, Salesbury 1547, Cheke 1550, Smith 1568, Hart 1569, Bullokar 1580, Gill, 1621, and Butler 1633.*

For ascertaining and comparing the different accounts of the pronunciation of the xvith century which have come down to us, it is necessary to have an alphabetic list of all or most of the words which have been spelled phonetically by various writers, with a uniform transcription of their various notations. This is attempted in the present section. The following vocabulary contains:

- 1) all the English words cited by PALSgrave, p. 31, with the pronunciations as inferred from his descriptions.
- 2) all the English words cited by SALESbury, pp. 32, 34, in his accounts of Welsh and English Pronunciation, with the pronunciation he has actually or inferentially assigned to them, as explained in the passages cited pp. 789-794.
- 3) numerous words from Sir JOHN CHEKE's *Translation of Matthew*.¹
- 4) all the words pronounced in Sir THOMAS SMITH's *Treatise* p. 34.
- 5) all the examples of diphthongs, and a few other words only from HART, pp. 35, 794, whose pronunciation, as has been already frequently mentioned, was in several respects exceptional.
- 6) All the exemplificative words in BULLOKAR's lists, with many others collected from various parts of his *Book at Large*, pp. 36, 838.

¹ The Gospel according to Saint Matthew and part of the first chapter of the Gospel according to Saint Mark translated from the Greek, with original notes, by Sir John Cheke, knight &c. Prefixed is an introductory account of the nature and object of the translation, by James Goodwin, B.D., London, Pickering, 1843, 8vo. pp. 124. Cheke

was born 16th June, 1514, and died "of shame and regret in consequence of his recantation" of Protestantism, 13th Sept., 1557. This translation, of which the autographic MS. is preserved (not quite perfect) at Corpus Christi College, Cambridge, is supposed by Mr. Goodwin to have been made about 1550.

7) all, or almost all words in GILL's *Logonomia*, pp. 38, 845; the provincialisms are not quite fully given, but GILL's whole account of them will be found below, Chap. XI, § 4, and they are best consulted in that connection.

8) A few characteristic words from BUTLER, pp. 39, 874.

The modern orthography has been followed in the arrangement of the vocabulary. Palsgrave and Salesbury occasionally give an old orthography different from that now in use, but the variation is not material. The others only give the phonetic spelling. Occasionally short observations from Smith and Gill have been added in the original Latin, and in some cases the Latin translation given by these authors is inserted. Some doubts may arise as to the propriety of retaining so many words about the pronunciation of which little hesitation can be felt by those who have mastered the main principles, such as, *abandon*, *abhor*, *abound*, *absence*, *absent*, &c. *bill*, *bit*, *bless*, *boast*, *boat*, &c., but after much consideration, it has been resolved to retain them, as no rule of exclusion could be framed, which did not seem to assume the very knowledge and familiarity which the vocabulary was meant to supply, and it is only by such accumulated proofs that the certainty of the results can impress itself on the reader's mind. These results are however extremely important in the history of our language, as they present the first sure ground after the time of Orrmin, and the only means by which we are able to rise to the pronunciation of Chaucer. Thus the certainty of the pronunciation of *ou*, *ow* as (uu) by Palsgrave and Bullokar, and the probability of their pronunciation of long *i* as (ii), are great helps towards conceiving the general use of these sounds in the xiv th century.

The various phonetic orthographies of the above writers (except Cheke's) have been translated into palaeotype to the best of my ability, although a few, unimportant, cases of doubt remain, generally pointed out by (?). The position of the accent is always hypothetical, except for the words cited from G. 128-138, in which Gill has generally marked or indicated the accent. It was at first intended to refer to Levins (p. 36,) for the position of the accent in each case, but his usage was found too uncertain to be made available. The use of (w, j) at the beginning of combinations where some writers employ (u, i), and conversely the use of (u, i) at the end of combinations where some writers employ (w, j), has been consistently maintained. The difference between these writers and myself is purely theoretical: we mean to express the same sounds in each case. *Qu* has been interpreted as (kw) throughout, because this is believed to have been the sound intended. Bullokar uses the single letter *q*. The initial *wr* has been left, but (*rw*) has been subjoined with a (?) as this is believed to have been the sound. Except in the words *spangle*, *entangle*, where the sound (qg) is especially indicated, G 10, the introduction of (qg) for *ng* in the following vocabulary is quite hypothetical, for none of the writers cited seem to have thought the distinction between (q) and (qg) worth marking at all times.

There was a great difficulty in determining the length of the

vowels. Palsgrave does not note the length and Salesbury is not consistent in his notation. Smith, Hart, and Gill generally use diacritical signs, and Bullokar does so in many cases. Now when this is the case the diacritical sign is often omitted by either the writer or printer, and it is difficult to know in any given case whether it ought to be added or not (p. 846, l. 3). The difficulty is increased when the diacritic implies a difference in quality as well as quantity, thus *i*, *ī* are (ei, *ī*) in Smith but (ii, *ī*) in Gill, and *ī* *ī* are probably (*ī*, *ī*) in Bullokar (p. 113). In these cases I have generally searched for other instances of the word, or been guided by the use of other writers, or by analogy. In Bullokar *y* is not unfrequent, but *iy*, *yī* may be said never to occur, although he gives both as marks of the long sound, and *ī* is most frequently used for both (*ī*) and (*ī*) although *ī* ought to have been used in the former case. By reference to pp. 110, 114, the reader will see the great difficulty which attaches to the value of long *ī* in Palsgrave and Bullokar, and the reasons which have induced me, after repeated consideration for several years, to consider that it must have been (*ī*) or some closely cognate sound, acknowledging at the same time that this pronunciation was quite archaic at the time, just as *obleege*, *obleest* (obliidzh-, obliist-) in Scotland and *obleecht* (obliisht-) in English are still existent archaic forms, for which the greater number of English speakers say (obləidzh-, obləidzhd-). For the reason why Gill's *j* has been rendered (ei) rather than (ei) see p. 115, and the reason why his *d*, *au*, are each rendered by (AA) is given on p. 145, where we may add that Gill in adducing "HALL Henriculus, HALE trahere, et HALL aula," says: "exilior est *a* in duabus vocibus prioribus, in tertiâ fere est diphthongus," (G. 3.) so that he possibly hesitated between (au) and (AA). Hart's (yy) has been considered on p. 167, p. 796 note, col. 1, and p. 838.

Another source of error is the use of an old letter in a new sense. Thus Smith employs *c* for (tsh) and he consequently continually leaves *c* for (k, s) where his old habits misled him. Gill employed *j* for (ei), and the confusion between *i*, *j* in his book is very perplexing. Extremely slight distinctions in the forms of the letters are also confusing. Thus Smith distinguishes (i, e) as *e*, *e*, which have a diæresis mark superposed to imply length. The consequence is that it is sometimes extremely difficult to determine whether he means (ii) or (ee), and, considering that in his time the distinction of the sounds had not yet been thoroughly established by the orthographies *ee*, *ea*, this confusion is perplexing and annoying.

For any errors and shortcomings of this kind, the indulgence of the reader is requested, and also for another inevitable source of error. The nature of the compilation, rendered it impossible to verify every word afterwards by referring to the passage from which it was quoted. I have therefore had to rely on the accuracy of my original transcript, and it is impossible that that should have been always correct.

Sir John Cheke's orthography is rather an attempt to improve the current spelling than strictly phonetic. Hence it has not been

transliterated, but left as he wrote it, and is therefore printed in Italics. The following appear to have been the values of his symbols, which were not always unambiguous: *aa*=(aa), *ai*=(ai, ee?), *ea*=(ee?) unfrequent, *ee*=(ee) and =(ii), *ei*=(ai, ee?) *ij*=(ei, ii, ii?), *o*=(o) and (u), *oa*=(oo?), *oo*=(oo?) and (uu), *oow*=(oou), *ou*=(uu) only? *ouc*=(ou), *uu*=(yy). The *i* most commonly did service for (*i*) and (*j*), but *y* was sometimes used as (*j*), although it most frequently stands for (th) and (dh), for which also *th* occasionally occurs. The use of *i* is doubtful, sometimes it seems meant for *ij*=(ei), sometimes as in *dai* it would seem only to indicate the diphthong, but it is used so irregularly that no weight can be attached to its appearance. The terminations *-ty*, *-ble*, occasionally appear in the forms *-tee*, *-bil*. Final *e*, being useless when there is a distinct means of representing long vowels, is generally, but not always omitted. The comparison of Cheke's orthography with the phonetic transcriptions of others seems to bring out these points.

The authority for each pronunciation is subjoined in chronological order, but not the reference to the passage, except in the case of Gill and Cheke. The figures refer to the page of the second edition of Gill's *Logonomia* (suprà p. 38) and the chapters of Sir John Cheke's translation of Matthew. The references to Salesbury will be found in the index, suprâ pp. 789-724. Smith and Bullokar's words can generally be easily found in their books, from their systematic lists. The example from Bullokar p. 839, and Hart, p. 798, are also sufficient guarantees of the correctness of the transcription. The authors' names are contracted, and a few abbreviations are used as follows. All words not in palaeotype, with exception of the authors' names, are in Italics.

EXTRACTS FROM RICHARD MULCASTER'S ELEMENTARIE, 1582.

Gill says in the preface to his *Logonomia*, "Occurrere quidem huic vitio [cacographiæ] viri boni et literati, sed irritò conatu; ex equestri ordine *Thomas Smithius*; cui volumen bene magnum opposuit *Rich. Mulcasterus*: qui post magnam temporis et bonæ chartæ perditionem, omnia Consuetudini tanquam tyranno permittenda censet." Mulcaster's object in short was to teach, not the spelling of sounds, but what he considered the neatest style of spelling as derived from custom, in order to avoid the great confusion which then prevailed. He succeeded to the extent of largely influencing subsequent authorities. In Ben Jonson's *Grammar*, the Chapters on orthography are little more than abridgements of Mulcaster's. Sometimes the same examples are used, and the very faults of description are followed. It would have been difficult to make

anything out of Mulcaster without the help of contemporary orthoepists, and it appeared useless to quote him as an authority in Chap. III. But an account of the xviith century pronunciation would be incomplete without some notice of his book, and the value of his remarks has been insisted on by Messrs. Noyes and Peirce (*infra* p. 917, note). A few extracts are therefore given, with bracketted remarks. Chronologically, Mulcaster's book should have been noticed before Gill's, p. 845. But as he was a pure orthographer who only incidentally and obscurely noticed orthoepy, these extracts rightly form a postscript to the preceding vocabulary. The title of the book, which will be found in the Grenville collection at the British Museum, is:—

The first part of the elementarie which entreateth chiefe of the right writing of our English tung, set furth by RICHARD MULCASTER. Imprinted at London by Thomas Vautroullier dwelling in the blak-friers by Lud-gate, 1582.

In Herbert's *Ames*, 2, 1073, it is said that no other part was ever published. In the following account, all is Mulcaster's except the passages inclosed in brackets, and the headings. The numbers at the end of each quotation refer to the page of Mulcaster's book.

The Vowels Generally.

The vowels generallie sound either long as, *compāring, reuēnged, enditing, encloſure, presūming*: or short as, *ransāking, reuēlling, penitent, omnipōtent, fortunat*: [here the example *revenge*, which had certainly a short vowel, shews that by length and brevity, Mulcaster meant *presence* and *absence* of *stress*, which applies to every case;] either sharp, as *māte, mēte, ripe, hōpe, dūke*. or flat as: *māt, mēt, rip, hōp, dūk*. [Here he only means long or short, and does not necessarily, or indeed always, imply a difference of quality, as will appear under E. Occasionally, however, he certainly does denote a difference of quality by these accents, as will be seen under O. In his "general table" of spelling, these accents seem frequently used to differentiate words, which only differed in their consonants, and it is impossible from his use of them to determine the sounds he perhaps meant to express. Thus in his chapter on *Distinction*, he says: "That the sharp and flat accents ar onlie to be set vpon the last syllab, where the sharp hath manie causes to present it self: the flat onlie vpon som rare difference, as *refuse, refuse, present, present, record, record, differ, differ,*

seuer, seuer." 151.—Where the grave accent seems to mark absence of stress, the quality of the vowel changing or not.] Which diuersitie in sound, where occasion doth require it, is noted with the distinctions of time [meaning *stress* in reality, which he indicates by -', because in English versification imitating the classical, quantity was replaced by stress], and tune [meaning length, which he indicates by accent marks, and hence confuses with tune], tho generallie it nede not, considering our daieleie custom, which is both our best, and our commonest gide in such cases, is our ordinarie leader [and hence unfortunately he says as little as possible about it].—110.

Proportion.

I call that *proportion*, when a number of words of like sound ar written with like letters, or if the like sound haue not the like letters, the cause why is shewed, as in *hear, fear, dear, gear, wear* [where the last word, which was certainly (*we*er), should determine the value of *ea* in the others to have been (*ee*) in Mulcaster's pronunciation, though, as others said (*hiir, fiir, diir*) even in his day, this may be too hasty a conclusion].—124.

A.

A Besides this generall note for the time and tune, hath no particular thing worth the obseruation in this place, as a letter, but it hath afterward in proportion, as a syllab. All the other vowells haue manie pretie notes. [This might mean that *a* always preserved its sound, and the other vowels did not. It is possible that the "pretie notes" only refer to his observations on them, and not to diversity of sound.]—111.

Ache, brache, with the qualifying *e*, for without the *e*, *t*, goeth before *ch*. as *patch, snatch, catch, smatch, watch*. The strong *ch*. is mere foren, and therefor endeth no word with *vs*, but is turned into *k*, as *stomak, monark*. [This context makes a long and *ch* = (tsh) in *ache* = (aatsh). Yet in his general table p. 170, he spells both *ache* and *ake*. See the illustrations of *ache* in Shakspeare, infra § 8.]—127.

AI, EI.

Ai, is the mans diphthong, and soundeth full: *ei*, the womans, and soundeth finish [=rather fine] in the same both sense, and vse; *a woman is deintie, and feinteth soon, the man fainteth not bycause he is nothing daintie*. [Whether any really phonetic difference was meant, and if so of what kind, is problematical. Smith had said the same thing, supra p. 120, but with Smith the word diphthong had a phonetic meaning, with Mulcaster it was simply a digraph, and he may have at most alluded to such differences as (ææ, ee) or (ee, ee). Compare the following paragraph.]—119.

No English word endeth in *a*, but in *aie*, as *decaie, assaie*, which writing and sound our vse hath won. [Does this confuse or distinguish the sounds of *a*, *ai*? It might do both. It ought to distinguish, because the writing of *ai* being different from the writing of *a*, the mention of its sound should imply that that sound was also different. But we cannot tell. See what follows.]—125.

Gaie, graie, traie. And *maid, said, quail*, English for *coif, quail, sail, rail, mail*, onelesse it were better to write these with the qualifying *e*, *quale, fale, rale, male*. [If any phonetic consistency were predicable of an orthographical reformer,—which, however, we are not justified in assuming,—this ought to in-

dicate a similarity of pronunciation between *ai* and *a*. To the same conclusion tend:] Howbeit both the terminations be in vse to diuerse ends. *Gain, pain*, if not, *Pane, gane, remane*, and such as these terminations, be also vsed to diuerse ends, [these "diuerse ends" being of course not to indicate diversity of sound, but diversity of sense; it would be quite enough for Mulcaster to feel that the vowel was long, and that a final *e*, and not an inserted *i*, was the "proper" way of marking length.] . . . *Fair, pair, air*, if not *Fare, pare, are*, both terminations also be vsed to diuerse ends. *Wait, strait*, if not *Wate, strate*. *Straight* or *streight*, bycause *ai* and *ei*, do interchange vses. *AIM*, or *ame, main*. *Paint, restraint, faint, or feint, quaint, or queint* . . . *Etc, eight, sleight, height, weight, feild, yeild, sheild*, the kinred between *ei*, and *ai*, maketh *ei*, not *anie* where so ordinarie, as in these terminations. [If we were inconsiderate enough to suppose that Mulcaster had any thought of representing the different sounds, as distinguished from the length, of vowels, all these cases, would be explicable by assuming *ai* = *ci* = (ee). and *a* long = (ææ). But this would be somewhat opposed to other parts of Mulcaster, and to the writings of contemporaries, and is founded upon the groundless assumption just mentioned. As to the similarity of *ai*, *a*, see supra p. 867, col. 2, and Mr. White's account of Elizabethan pronunciation, infra.]—136-7.

E.

Whensoeuer *E*, is the last letter, and soundeth, it soundeth sharp, as *mé, sé, wé, agré*. sauing in *the*, the article, *ye* the pronoun, and in Latin words, or of a Latin form, when theie be vsed English like, as *certiorare, quandare*, where *e*, soundeth full and brode after the originall Latin. [Here, as we know that the sounds were (mii, sii, wii, agrii', dhe), though (je) is not so certain from other sources, we might suppose *é* = (ii), *è* = (e). Ben Jonson, however, in abstracting and adapting this passage, distinctly makes the sound (ii), saying (Gram. chap. iii.), "When it is the last letter, and soundeth, the sound is sharp, as in the French *i*. Example in *mé. sé. agré. ye. shé*. in all, saying the article *thé*." Observe that *ye* is now (yii) and not (je). Observe

also that *quandary* is referred to a Latin origin, *quam dare*, as if they were the first words of a writ.] Whensoever *e*, is the last, and soundeth not, it either qualifieth som letter going before, or it is mere silent, and yet in neither kinde encreaseth it the number of syllabs. I call that *E*, qualifying, whose absence or presence, sometime altereth the vowel, sometime the consonant going next before it. It altereth the sound [length] of all the vowels, euen quite thorough one or mo consonants, as *mâde*, *stème*, *éche*, kinde, *stripe*, *ôre*, *cûre*, *tôte* sound sharp with the qualifying *E* in their end: wheras, *mâd*, *stèm*, *éch*, *frind*, *strip*, or *cur*, *tost*, contract of tossed, sound flat without the same *E*. [Now as we know that *steam*, *each*, were (*steem*, *eech*), it follows that *e* represented either (ii) or (ee), that is, that the acute accent only represented length, independently of alteration in quality of tone; there was such an alteration in *cûre*, *cûr*, certainly, and in *stripe*, *strip*, according to the current pronunciation; but there was or was not in *sé*, *stème*, compared with *stèm*, and hence we have no reason to infer that there was any in *mâde*, *mâd*, *ôre*, *ôr*. Ben Jonson alters the passage thus: "Where it [*E*] endeth, and soundeth obscure, and faintly, it serves as an accent, to produce the Vowel preceding: as in *mâde*. *stème*. *stripe*. *ôre*. *cûre*. which else would sound, *mâd*. *stèm*. *strip*. *ôr*. *cûr*." It is tolerably clear that by using "produce" in place of Mulcaster's "alter the sound," he intended to avoid the difficulty of considering *stème* = steam as (*stiim*), unless, indeed, he meant it to be a contraction for *esteem*. He omits the example *each* for a similar reason.]—111.

Pert, *desert*, the most of these sorts be bisyllabs or above: besides that, *a*, dealeth verie much before the *r*, [meaning probably that *er* was often sounded (*ar*)]. By *deserue*, *preserue*, *conserue*, it should appear that either we strain the Latin *s* to our sound, or that theie had som sound of the *z*, expressed by *s*, as well as *w*, [did he say (*konzerv*)?]—132.

I.

I, in the same proportion [suprà p. 911] soundeth now sharp, as *giue*, *thriue*, *aliue*, *viue*, *title*, *bibie*, now quik, as *giue*, *Rue*, *siue*, *title*, *bible*,

which sounds *ar* to be distinguished by accent, if acquaintance will not seme in much reading. [As Ben Jonson uses the same words and notation, and we know that he must have distinguished his *i*, *z*, as (*oi*, *z*) there is no reason for supposing that Mulcaster's *i* was anything but (*ei*) or (*oi*). But at the same time there is nothing to militate against the contemporary Bullokar's (*ii*). And Mulcaster's pronunciation of *ou* as (*uu*), infrà p. 914, which is about the only certain result that can be elicited from his book, renders the (*ii*) probable.]—116.

I, besides the time and tune thereof noted before, hath a form sometime vowelish, sometime consonantish. In the vowelish sound either it endeth a former syllab or the verie last. When it endeth the last, and is it self the last letter, if it sound gentlie, it is qualified by the *e*, as *manie*, *merie*, *tarie*, *carie*, where the verie pen, will rather end in *e*, than in the naked *i*. If it sound sharp and loud, it is to be written *y*, having no *e*, after it, as neding no qualification, *deny*, *cry*, *defy*. [This at any rate goes against Gill's use of final (*ai*), suprà p. 281, which, however, he only attributes to "numerus poeticus," *Log*. p. 130, in his Chap. 25, quoted at length, infrà § 8.]—113.

If it [*I*] end the last syllab, with one or mo consonants after it, it is shrill [long] when the qualifying *e*, followeth, and if it be shrill [long] the qualifying *e*, must follow, as, *repine*, *envisie*, *minde*, *kinde*, *fiste* [foist?]. If it be flat and quik, the qualifying *e*, must not follow, as, *examin*, *behind*, *mist*, *fist*. [Observe (*behind*) with a short vowel, and hence certainly not (*beineind*).]—114.

The quik *i*, and the gentle passant *e*, *ar* so near of kin, as theie enterchange places with pardon, as in *descried*, or *descriyd*, *findeth*, or *findith*, *hir*, or *her*, the error is no heresie.—115.

If it [*I*] light somewhat quiklie vpon the *s*, then the *s* is single, as *promis*, *tretis*, *amis*, *aduertis*, *enfranchis*, etc. [This seems to establish (*adver*-*tis*, *enfranchis*) as the common pronunciation.]—133.

O.

O is a letter of as great vncertainty in our tung, as *e*, is of direction both alone in vowel, and combined in diphthong. The cause is, for that in vowel

it soundeth as much vpon the u, which is his cosin, as vpon the o, which is his naturall, as in *cōsen, dōsen, mōther*, which o, is still naturallie short, and, *hōsen, frōsen, mōther*, which o, is naturallie long. In the diphthong it soundeth more vpon the u, then vpon the o, as in *found, wound, cow, sow, bow, how, now, and bōw, sōw, wrōught, ough, mōw, trōugh*. Notwithstanding this varietie, yet our custom is so acquainted with the vse thereof, as it will be more difficultie to alter a known confusion, then profitable to bring in an vnknown reformation, in such an argument, where acquaintance makes iustice, and vse doth no man wrong. And yet where difference by note shall seem to be necessarie the titles of *proportion* and *distinction* will not omit the help. In the mean time thus much is to be noted of o: besides his time long and short, besides his tune with or without the qualifying e, sharp or flat, that when it is the last letter in the word, it soundeth sharp and loud, as *agó, tó, só, mó*. saue in *tò* the preposition, *twò* the numerall, *dò* the verb: his compounds as *endò*, his deriuatiues as *dōing*. In the middle syllabs, for tune, it is sharp, as here, or flat if a consonant end the syllab after o. For time the polysyllab will bewraie it self in our daile pronouncing: considering the children and learners be ignorant, yet he is a verie simple teacher, that knoweth not the tuning of our ordinarie words, yea tho theie be enfranchised, as *ignorant, impudent, impotent*. O varieth the sound in the same proportion, naie oftimes in the same letters, as *lōue, glōue, dōue, shōue, remōue, and lōue, grōue, shrōue, nōue*. This duple sound of o, in the vowel is Latinish, where o, and u, be great cosens, as in *voltus, vultis, colo*. And *vultus, vultis, occulo*: in the diphthong it is Grekish, for theie sound their *ou*, still vpon the u, tho it be contract of oo, or o e [there is some misprint in these oo, o e which is imitated here], wherein as their president [precedent] is our warrant against objection in these, so must acquaintance be the mean to discern the duple force of this letter, where we finde it, and he that will learn our tung, must learn the writing of it to, being no more strange then other tungs be euen in the writing. [It would seem by the general tenor of these remarks, that the two sounds of o were (oo, u), and even that

the diphthong *ou*, in those words where it is said to "sound more vpon, the, u then vpon the, o," had, as with Bullokar and Palsgrave, the sound of (uu). It is in fact difficult to conceive that Mulcaster pronounced otherwise. And this sounding of *ou* as (uu), leads, as before mentioned, p. 913, to the suspicion of sounding i long as (ii).]—115.

O, in the end is said to sound lowd, as *go, shro* [shrew?], *fro*, sauing *tò, dò, twò*, etc. . . . O before, l, sounding like a diphthong causeth the ll, be dubbed, as *troll*. And if a consonant follow, l, o, commonlie hath the same force, tho the l, be but single, *told, cold, bold, colt, dolt, colf, rolf, holt, holm, scold, dissolue*. [The last example is peculiar.] O, before m, in the beginning, or middle of a word, leading the syllabs soundeth flat vpon the o, as *omnipotent, commend*, but in the end it soundeth still vpon, the u, as *som, com, dom*, [hence the first is (o), the second (u)] and therfor in their deriuatiues, and compounds as *welcom, troublesom, newcom, cumber-som, kingdom*. With e, after the m, as *home, mome, rome* [roam?], and yet *whom, from*, haue no, e, by *prerogatiue* of vse, tho theie haue it in sound and seming [that is are called (hoom froom), which is strange, especially as regards *from*.] . . . Or is a termination of som truble, when a consonant followeth, bycause it soundeth so much vpon the u, as *worm, form*, [(furm)?] *sword, word*, and yet the qualifying e, after wil bewraie an o, as the absense thereof will bewraie an u, *storne, o, worm, u, lorde o, hord, u*.—134.

Good, stood, yood. Hoof, roof. Look, took, book, hook. School, tool. Groom, bloom. Hoop, coop. If custom had not won this, why not *ou*? Bycause of the sound which these diphthongs haue somtimes vpon the o, sometimes vpon the, u. I will note the o, sounding vpon himself, with the streight accent, bycause that o, leadeth the lesse number. *Bōw, knōw, sōw, and Bōw, sōw, cōw, mōw*. [That is (buu, suu, kuu, muu), but there seem to be some misprints in what follows, compare the *wrōught, ough, mōw, trōugh*, given above.] *Outch, croutch, slowtch. Lowde, lowdle. Houf, alouf. Gouge, bouge. Cough, ough, ought, of ow, with, w, from the primitive. Fough, nough, cough, wrōught, sought*. again, *Bought, mought, dought. Plough, rough, slough,*

enough. *Houl, coul, skoul*. Why not as well as with oo? *Roun, broun, loun*. Noun, crown, clown, down. *Oown, grōwn*, vpon the deriuatiue. *Stoup, loup, droup, coup*. Sound, ground, found. Our commonlie abreuatiounlike as *our*, the termination for enfranchisements, as *autour, procuratour*, as, *er* is for our *our*, as *suter, writer*: *Bour, lour, flour, four*, alone vpon the, *o*. *Mourn, adiourn*. *Howse, lowse, mowse*, the verbes and deriuatiues vpon the, *z*, as *House, louse, mouse*, the nouns vpon the, *s*, *Ous*, our English cadence for Latin words in *ous*, as *notorious, famous, populous, riotous, gorgeous*, being as it were the vning of the chefe letters in the two syllabs, *o*, and *u*, *ous*. *Clout, lout, dout*. [These instances are strongly confirmatiue of the close *ou* having been (*uu*) to Mulcaster, and his only knowing the open *ou* or (*oou*).]—136.

OI.

Thirdlie, *oi*, the diphthong sounding vpon the *o*, for difference sake, from the other, which soundeth vpon the *u*, wold be written with a *y*, as *ioy, anoy, toy, boy*, whereas *anoint, appoint, foil*, and such seme to haue an *u*. And yet when, *i*, goeth before the diphthong, tho it sound vpon the *u*, it were better oy then *oi*, as *ioynt, ioynt*, which theie shall soon perceiue, when theie mark the speede of their pen: likewise if *oi* with *i*, sound vpon the *o*, it maie be noted for difference from the other sound, with the streight accent, as *boie, enioie*.—117-8.

U.

V besides the notes of his form, besides his time and tune, is to be noted also not to end anie English word, which if it did it should sound sharp, as *nú, trí, vertú*. But to auoid the

nakednesse of the small *u*, in the end we vse to write those terminations, as *ew* the diphthong, as *new, trew, vertew*. [Whether this implies that *u* was called (*iu*), or that *ew* was called (*yy*) occasionally, as in Smith and Palsgrave, it is hard to say.]—116.

-URE.

I call that a bissyllab, wherein there be two seuerall sounding vowels, as *Asur, rasur, masur*, and why not *lasur*? [Are these words *azure, rasure, measure, leisure*? If so the orthography, or the confusion of *a, ea, ei*, into one sound, is very remarkable. Further on he writes:] *Natur, statur, Measur, treasur*. [Probably this settles the question of *measure*; but the spelling would indicate that the final *-ture, -sure*, were (*-tur, -sur*), which would haue immediately generated the xvii th century (*-tər, -sər*), and not Gill's (*-tyr, -syrr*). Probably both were in use at that time.]—137. This shortnesse or length of time in the deriuatiues is a great leader, where to write or not to write the qualifying, *e*, in the end of simple words. For who will write, *natur, perfit, measur, treasur*, with an, *e*, in the end knowing their deriuatiues to be short, *natürall, perfittie, measured, treasures*? . . . And again, fortun profit, comfort, must haue no, *e*, bycause *fortunate, profiting, comforter*, haue the last saue one short. [It will be seen in Chapter IX. § 2, in Hodges's list of like and unlike words, after the vocabulary, that the pronunciation (*-ter*) or (*-tər*) prevailed at least as early as 1643. See also the remarks in Mr. White's Elizabethan Pronunciation, *infra*. The examples *fortün, fortun*, point to the early origin of the modern vulgarism (*faat'n, faat'nit*).]—150.

REMARKS FROM AN ANONYMOUS BLACK-LETTER BOOK, PROBABLY OF THE XVII TH CENTURY.

As these pages were passing through the press, I met with an 8vo. black-letter book, without date or place, the date of which is supposed to be 1602 in the British Museum Catalogue, press-mark 828, f. 7, entitled:

“Certaine grammar questions for the exercise of young Schollers in the learning of the Accidence.”

In the enumeration of the diphthongs, occur the following remarks which clearly point out *ea* as (*ee*), and distinguish *i* short and *i* long as hauing characteristically different sounds, probably (*i ei*) or (*ei*):—

"*ea* for *e* full great
ce or *ie* for *i* smal greefe
ui for *i* broade guyde."

The following curious passage shews that *si-* was by error occasionally pronounced (sh) in reading Latin words, and hence had most probably the same unrecognized English sound at the close of the xvith century. It is unfortunate that the book is of unknown date, and that there is nothing which suggests the date with certainty. The type and spelling have the appearance of the xvith century, and there is a written note "happening byforhond," appended to *Accidents* on the last page of sig. B, which is apparently of that date, but there are other words on the next page in a much later hand. The information then must be taken for what it is worth, but it seems to be of Shakspere's time, and is important as the oldest notice of such a usage.

Q. Nowe what thinges doe yee obserue in reading :

R. These two thinges. 1. { *Cleane sounding.*
 2. { *Dewe pawsing.*

Q. Wherein standeth *cleane sounding* :

R. In giuing to euery letter his iust and full sounde. In breaking or diuiding euery worde duely into his seuerall syllables, so that euery syllable may bee hearde by himselfe and none drownd, nor slubbered by ill fauouredly. In the right pronouncing of *ti*, whiche of *vs* is commonly sounded *ci* when any vowel doeth follow next after him or els not. And finally in avoyding all such vices as are of many foolishly vsed by euill custome.

Q. What vices be those :

R. *Iotacismus.* sounding *i* too broade.

2. *Lambdacismus.* sounding *l* too full.

3. *Ischnotes.* mincing of a letter as feather for father.

4. *Traulismus.* stammering or stutting.

5. *Plateasmus.* too much mouthing of letters.

6. *Cheilostomia.* maffling or fumbling wordes in the mouth.

7. *Abusing of letters.* as *v* for *f.* *vat* for *fat.* *z* for *s* as *muza* for *musa.* *sh* for *ci.* as *fasho* for *facio* *dosham* for *doceam* *fælishum* for *felicium* and such like.

Q. Wherein standeth due pawsing :

R. In right obseruation of the markes and prickes before mencioned."

Here the *Iotacismus* may be considered to reprobate the pronunciation of Latin *i* as (ei). The *Lambdacismus* alludes to the introduction of (u) before (l). For both errors, see *suprà* p. 744, note 1. The *ischnotes* (*suprà* p. 90, n. 1) of *feather* for *father*, either means the actual use of the sound (feedh'er) for (faadh'er), in which case this would be the earliest notice of the pronunciation of *a* long as (æ), but still as a reprobated vulgarism, antedating its recognition by nearly a century,—or else it means merely thinning *a* from (aa) to (ææ), which was no doubt sporadically existent at this early period. The enigmatical *fedder* of Salesbury may, as we have seen, also refer to *father* (*suprà* p. 750, n. 8), and both may indicate an

anomalous pronunciation confined to that single word. The *abusing* of letters reminds one of Hart, *suprà* p. 794, note 1. It is observable that the use of (z) for (s), in *musa*, is reprobated, although probably universal, as at present, and is placed in the same category with (v) for (f), a mere provincialism, and (sh) for *ci*-, which we here meet with for the first time, and notably in terms of reprobation, and after the distinct mention of the "right pronouncing of *ti*" as "of vs commonly sounded *ci*," meaning (*si*) "when any vowel doth follow next after him or els not." As late as 1673, E. Coote writes in his *English Schoolmaster*, p. 31: "*Rob.* How many ways can you express this sound *si*? *Joh.* Only three; *si*, *ci*, and *sci* or *xi*, which is *csi*. *Rob.* Now have you erred as well as I; for *ti* before a vowel doth commonly sound *si*." So that (sh) was not even then acknowledged. It is curious that there is no reference to the use of (th) for *t* and *d* final, see *suprà*, p. 844, under D and T.

§ 8. On the Pronunciation of Shakspeare.

Our sources of information respecting the pronunciation of Shakspeare are twofold, external and internal. The external comprises those writers which have been examined in Chap. III., and illustrated in the preceding sections of the present chapter.¹ Of these,

¹ The first published attempt to gather the pronunciation of Shakspeare from the writings of preceding orthoepists is, so far as I know, an article in the "North American Review" for April, 1864, pp. 342-369, jointly written by Messrs. John B. Noyes and Charles S. Peirce. Unfortunately these gentlemen were not acquainted with Salesbury, whose works are the key to all the others. Had they known this orthoepist, the researches in my third and eighth chapters might have been unnecessary. Salesbury's Welsh Dictionary first fell under my notice on 14 Feb. 1859; his account of Welsh pronunciation was apparently not then in the British Museum, and seems not to have been acquired till some years afterwards, during which time I vainly sought a copy, as it was necessary to establish the value of his Welsh transcriptions. I had finished my first examination of Salesbury, Smith, Hart, Bullokar, Gill, Butler, Wallis, Wilkins, Price, Miege, Jones, Buchanan, and Franklin, and sent the results for publication in the Appendix to the 3rd edition of my *Plea* (*suprà* p. 631, note) in 1860, but the printing of that work having been interrupted by the outbreak of the Civil War in America, they have not yet appeared. My attention was directed

to Messrs. Noyes and Peirce's article in March, 1865, and I noted all the works they quoted, some of which I have unfortunately not been able to see; and others, especially R. Mulcaster's *Elementarie*, 1582 (*suprà* p. 910), and Edward Coote's *Schoole-Master*, 1624 (*suprà* p. 47, l. 19), which Mr. Noyes considers as only inferior to Gill and Wallis, I have scarcely found of any value. When I re-commenced my investigations at the close of 1866, since which time I have been engaged upon them with scarcely any intermission, I determined to conduct them independently of Messrs. Noyes and Peirce's labours, with the intention to compare our results. It will be found that we do not much differ, and the points of difference seem to be chiefly due to the larger field here covered (those gentlemen almost confined themselves to Elizabethan times), and perhaps to my long previous phonetic training. The following are the old writers cited by Messrs. Noyes and Peirce:—Palsgrave, Giles du Guez, Sir T. Smith, Bullokar, "*Æsops Fables in true Ortography*, with Grammar Notz, 8vo., 1585" (which I have not seen), P. Bales, 1590 (not seen), Gill, Butler, B. Jonson, Wallis, Baret, Gataker, Coote, Percival's *Spanish Grammar*,

however, Palsgrave, Salesbury, Smith, and Hart, wrote before Shakspeare's birth or when he was a baby (see table p. 50), and although Bullokar published his book when Shakspeare was sixteen, it represents a much more archaic form of language than Hart's, of which the first draft (*suprà* p. 794, note) was written six years before Shakspeare's birth. Gill, who was born the same year as Shakspeare, should naturally be the best authority for the pronunciation of the time. He was head master of St. Paul's School during the last eight years of Shakspeare's life, and he published the first edition of his book only three years after Shakspeare's death. But Gill was a favourer of old habits. We have on record his contempt of the modern thinness of utterance then affected by the ladies (pp. 90, 91) and his objections to Hart's propensities in that direction (p. 122). Gill was a Lincolnshire man, of East Midland habits. Shakspeare was a Staffordshire man, more inclined to West Midland. Hence, although Gill no doubt represented a recognized pronunciation, which would have been allowed on the stage, it is possible that Shakspeare's individual habits may have tended in the direction which Gill reprobated. The pronunciation of the stage itself in the time of the Kembles used to be archaic, and our tragedians (or such of them as remain) still seem to affect similar habits. But it is possible that in Shakspeare's time a different custom prevailed, and that dramatic authors and actors rather affected the newest habits of the court. Hence the necessity for proving the indications of Gill and other writers by an examination of Shakspeare's own usage, so far as it can be determined from the very unsatisfactory condition in which his text has come down to us.

The internal sources of information are three in number, puns, metre, and rhyme.¹ The first is peculiar and seems to offer many advantages in determining identity of sound, accompanied by diversity of spelling, but is not really of so much use as might have been expected. The metre, properly examined, determines the number of syllables in a word and the place of the accent, and, so far as it goes, is the most trustworthy source of information which we possess. The rhyme, after our experience of Spenser's habits, must be of very doubtful assistance. At most we can compare general habits of rhyming with the general rules laid down by contemporary orthoepists. A few inferences may be drawn from peculiarities of

1623 (not seen), Cotgrave, Nat Strong (not seen), Wilkins, Mulcaster, Festeau, 1673 (not seen), Berault, 1698 (not seen), De la Touche, 1710 (not seen), Taudon, 1745 (not seen), Sharp on English Pronunciation, 1767, and the following, which I have not examined, Nares, 1784, Hexham 1660, Pomey, 1690, Saxon 1737. Messrs. Noyes and Peirce's conclusions will be inserted as footnotes to the subsection headed "Conjectured Pronunciation of Shakspeare," immediately before the speci-

men at the end of this chapter.

¹ An elaborate attempt to determine the pronunciation of some vowels and consonants by means of rhymes, puns, and misspellings, was made by Mr. Richard Grant White in his edition of Shakspeare, vol. 12, ed. 1861. This did not come under my notice till these pages were passing through the press. An abstract of his researches, with remarks, will be found below, immediately after the present examination of Shakspeare's rhymes.

spelling, but when we recollect that Shakspeare did not revise the text, and, if he had done so, might not have been very careful in correcting literals, or have had any peculiar notions of orthography to enforce, we cannot lay much store by this. Nevertheless I have thought it right to read through the whole of Shakspeare with a view to his puns and rhymes, and, during the latter part of this task, I also noted many metrical and accentual peculiarities. The results obtained will have more or less interest to Shakspearean students, independently of their phonetic bearing.

The following system of reference has been adopted in which I have had in view the owners of *any* modern edition, and have more especially consulted the convenience of those who possess Macmillan's *Globe* edition, of which the text is the same as that of the Cambridge Shakspeare, edited by Messrs. W. G. Clark and W. Aldis Wright.

In case of the *plays* the first figure following the title represents the *act*, the second the *scene*, and the third the number of the *speech*. The speeches are generally not numbered. The speeches in each scene were, I believe, first numbered by me in phonetic editions of T and M in 1849, and Mr. Craik, in his edition of JC, numbered the speeches from beginning to end of the play, thinking that he was the first person who had done so. There may be some doubt in some plays, as AC, regarding the number of the scenes, and in a few scenes as to the number of speeches, but those who have been in the habit of using Mrs. Cowden Clarke's Concordance to Shakspeare, where the reference is to act and scene only, will readily acknowledge the great convenience of having only to count the

speeches to find the passage with tolerable certainty, instead of having to read through a whole long scene. It would be a great boon if subsequent publishers of Shakspeare would adopt this plan of numbering the speeches, which would give a means of reference independent of the size of the page, and serving for the prose portions as well as for the verses. In the specimens at the close of this section the speeches are numbered in the way proposed, the current number being prefixed to the name of the speaker. Finding, however, that this reference is not always minute or convenient enough, I have inserted two other numbers in a parenthesis, the first referring to the page (number unaccented denoting the first, and number accented the second column) in the Globe edition, and the second pointing out the line of the previously indicated scene in *that edition*. When the scene consists wholly of verse, this number coincides with that of the line in the Cambridge edition, but when any prose has preceded, as the number of words in a line in the Globe edition is less than that in the Cambridge edition, the number of the line in the former is somewhat greater than that in the latter. Thus

gilt guilt 2 H⁴ 4, 5, 31 (432', 129)

shews that the pun, *gilt guilt*, is found in the second part of Henry IV, act 4, scene 5, speech 31; Globe edition, page 432, column 2, verse 129 of this fifth scene. The reference is always to the first line and first speech in which the several words which form the pun and rhyme occur. Consequently the reader will have to refer to some following lines, and even speeches, occasionally, to find the full pun or rhyme. The order of the words in the rhyme as cited is generally, but not always, that in which they occur in the original, and hence the reference must be considered as belonging to *either* word.

The *Sonnets* are referred to by the number of the sonnet and verse, with the page or column in the Globe edition, so that

prove love S 117, 13 (1045')

shews that the rhyme *prove love*, occurs in sonnet 117, verse 13; Globe edition, page 1045, column 2.

For the other poems, VA, RL, LC, and PT, the annexed numbers give the verses and column in the Globe edition. PP gives the number of the poem and verse of the poem as in the Cambridge edition, and the column and verse in the Globe edition.

SHAKSPERE'S PUNS.

The word *pun* is modern and is not used in Shakspeare. The following terms have been noted:

Quips TG 4, 2, 1 (35', 12), MW 1, 3, 27 (45, 45). AY 5, 4, 28 (227', 79). H ⁴ 1, 2, 11 (383', 51).	Crotchets, MA 2, 3, 16 (118', 58).
Snatches MM 4, 2, 3 (83, 6).	Jests MA 2, 3, 68 (119', 206). LL 5, 2, 178 (155, 373), 2, 1, 85 (141, 206), H ⁴ 5, 3, 22 (406', 56).
Double meaning MA 2, 3, 81 (120, 267).	Conceits LL 5, 2, 130 (154, 260). H ⁴ 4, 1, 27 (485', 102).
Equivocation H 5, 1, 51 (841, 149).	Quillets Oth. 3, 1, 15 (892, 26).

These jests are not merely puns.¹ They include catchings up, misunderstandings, intentional or ignorant, false pronunciations, humorous allusions, involuntary associations of sound, even in pathetic speeches, coarse *doubles entendres*, and jokes upon words of every imaginable kind. Many of these defy notation, and are also useless for our present purpose. By far the greater number of real puns involve no difference of spelling, and were therefore not worth citing. But so inveterate was Shakspeare's habit of playing upon words, that I have marked specimens in every play except AC, where most probably I have overlooked some covert instance.

The following, although they present a slight difference of spelling, convey little if any information.

- tide tied TG 2, 3, 3 (26', 42).
 foul fowl MW 5, 5, 1 (64', 12).
 dam damn CE 4, 3, 16 (104, 54). MV 3, 1, 10 (191', 23). AY 3, 2, 9 (215', 9). In the last instance *damned* = *dammèd* or *wedged*. The more solemn instance in MV, discountenances the *dam-ned* usually preferred by actresses in M 5, 1, 15 (806', 39). Gill's (kondemn-) is probably an oversight.
 sink cinque MA 2, 1, 22 (115, 82). This also is in favour of the pronunciation of French *in*, *suprà* p. 827.
 holiday holyday KJ 3, 1, 10 (340', 82). This reminds us of Salesbury's confusion of *holy*, *holly*, *suprà* p. 99, n. 3.
 gilt guilt 2 H⁴ 4, 5, 31 (432', 129). H² 2, prol. (443, 26). This agrees with the preceding vocabulary p. 892, and shews the *u* was not pronounced in *guilt*.
 Lacies laces 2 H² 4, 2, 25 (516', 47). This makes the pronunciation of final -es, as (-is) or (-iz), probable, but not certain. Dick, the butcher, speaks it.
 presents presence 2 H² 4, 7, 11 (519', 32). This cannot be relied on for indicating the habitual omission of *t* in the first word; the joke is one of Jack Cade's.

The following shew the indistinctness with which unaccented final -al -el, -il, or -ar, -er, -our were already pronounced.

- sallet salad 2 H² 4, 10, 1 (521', 11).
 council counsel MW 1, 1, 51 (43, 120).
 capital capitol H 3, 2, 23 (328, 108).
 medlar meddler AY 3, 2, 31 (216, 125).
 Tim 4, 3, 91 (758, 307).
 dollar dolour T 2, 1, 9 (7, 18), MM 1, 2, 24 (68', 50) KL 2, 4, 19 (859, 54). This favourite pun also indicates the shortness of the first *o* in *dolour*.
 choler collar RJ 1, 1, 2 (712, 3), H⁴ 2, 4, 123 (393, 356). This makes *o* short in *choler*.
 manner manor LL 1, 1, 56 (137, 208). This makes *a* short in *manor*. Form (a seat), form (manner) *ibid.* shews that Walker's distinction, which makes the first (*fooxm*) and the second (*faaxm*), was a recent development.
 consort concert RJ 3, 1, 15 (725', 48). This discountenances the modern endeavour to make the -ort of *consort* distinct (kon'sort). But compare consórt, TG 4, 1, 84 (35, 64), KL 2, 1, 30 (856', 99).

¹ "Pun play upon words: the expression has not yet been satisfactorily explained: Serenius would explain it by the Icelandic *funalegr* frivolous, Todd by fun, Nares by the obsolete pun, now pound, so that it would properly mean 'to beat and hammer upon the same word;' Mahn refers also to Anglo-saxon *punian* to bruise, and to the English point, French *pointe*." Ed. Mueller, Etymolo-

gisches Woerterbuch der Englischen Sprache. Wedgwood adopts Nares's explanation. What is the age of the word? That it was not used in Shakspeare, where he had so much need of it, seems evidence against any ancient derivation, and to reduce it to the chance associations of comparatively modern slang. There is little use in looking for old roots unless the word itself is known to be old.

The very vague allusions in the following jokes shew how careful we must be not to lay too much stress on the identity of the sounds in each word.

English.

laced lost TG 1, 1, 39 (22, 101).
lover lubber TG 2, 6, 26 (29, 48).
Cæsar, Keisar, Pheezar MW 1, 3, 9 (45, 9).

See Mr. White's Elizabethan pronunciation, *infra*, under TH.
beside, by the side MA 5, 1, 46 (130, 128).

tittle title LL 3, 1, 25 (144, 86). This is a mere alliteration, like the preceding *rags robes*.

insinuate insanie LL 5, 1, 6 (150, 28).

cloves cloven LL 5, 2, 318 (158, 654).

Stoicks stocks TS 1, 1, 2 (232, 31).

court her, cart her TS 1, 1, 5 (232, 54).

mates, maid, mated TS 1, 1, 8 (232, 59).

It is impossible to suppose that *mates*, *maid* (*supra* p. 867, col. 2), had the same vowel, and yet the play upon the phonetic resemblance is evident. rhetoric ropetrick TS 1, 2, 26 (235, 112).

night knight H¹ 1, 2, 7 (383', 27).

"Let not us that are squires of the *night's* body be called thieves of the day's beauty." The pun is complete in modern English. We have no reason to suppose that *k* in *knight* was disused till long afterwards (*supra* p. 208). There is also a vague similarity of sound in *body*, *beauty* (bod'i beurti), but no real pun as Mr. Grant White supposes, see his Elizabethan Pronunciation, *infra*, under EAU.

purse person 2 H¹ 2, 1, 34 (415', 127).

care, cure, corrosive H⁶ 3, 3, 1 (483, 3).

The manifest difference of the vowels here, shews that we have no reason to assume identity in the last case.

To this same category belong the following plays on Latin and French words, intended to imply ignorance.

Latin.

hanc hoc, hang hog MW 4, 1, 26 (59, 50).

caret carrot MW 4, 1, 30 (59, 55).

Shewing probably that *caret* was pronounced with a short, and not with the modern Etonian fashion with a long (keerret).

horum whore MW 4, 1, 37 (59, 63).

Countenancing the sound (hoor)

addle egg, idle head TC 1, 2, 74 (624', 146).

baes = *baas* bear C 2, 1, 8 (662, 12).

loggerhead loghead RJ 4, 4, 10 (734', 17).

feast-won, fast-lost Tim 2, 1, 83 (748', 180). Read (feest, faast) or (fast).

surcease success M 1, 7, 1 (792, 4).

Read (sursees' sukses') and the play on the sound will be evident, it is quite lost in the modern (*susiis' saks'es*).

suitor shooter LL 4, 1, 37 (144', 109),

on this uncertain allusion see *supra* pp. 215-218 and footnotes. In addition to the citations there made, Mr. Edward Viles has kindly furnished me with the following:—"There was a Lady in *Spaine*, who after the decease of hir Father hadde three sutors, (and yet neuer a good Archer.)" Lyly's *Euphues* and his England, p. 293, Arber's reprint. This is from the book on which LL is, so to speak, founded, and hence establishes the existence of the joke in Shakspeare's time. We shall, however, have occasion to see that the resolution of (si) into (sh) was not the received, or polite custom of that period, although it was known and reprobated (*supra* p. 915): In the same way a modern joke might be made from *picked her picture*, which Cooper, 1685, gives as absolutely identical in sound, although (pik'ti) is now a pure vulgarism.

goats Goths AY 3, 3, 3 (218', 9). See Mr. White's Elizabethan pronunciation, *infra*, under TH.

wittol wit-old LL 5, 1, 26 (150', 66).

green wit, green withe LL 1, 2, 51 (138', 91). See Mr. White's Elizabethan pronunciation under TH.

rather than (huur) as in Smith, and commonly in our tragedians' Oth.

genitive case, Jenny's case MW 4, 1, 37 (59, 64). This does not settle (Dzhen'i) in preference to (Dzhin'i) as now, for *genitive* might have been heard or spoken with (i). See rhymes of (e, i) below.

ad dunghill, ad unguem LL 5, 1, 31 (150', 81). As we cannot suppose

unguem to have had any vowel but (u, u), this confirms the (u) sound in *dung*.

Jupiter gibbet maker TA 4, 3, 13 (705, 80), a clown's mistake.

French.

lucres louses MW 1, 1, 8 (42, 17). This would seem to indicate the old pronunciation (luus) for this uncommon word, to which the French was assimilated, but the confusion is credited to a Welshman, and hence is of no authority in English speech.

enfranchise, one Frances LL 3, 1, 54 (142', 12).

moi moy H^s 4, 4, 7 (459', 14).

bras brass H^s 4, 4, 9 (459', 18).

Probably indicating the continued pronunciation of final *s*.

pardonnez moi a ton of moys H^s 4, 4, 11 (459', 23). That is, Pistol echoes

The following instances are which they mainly illustrate.

A.

bate beat TS 4, 1, 67 (245, 209). There is no doubt of the pronunciation of *ea*=(ee), and this passage would be unintelligible unless the sound of long *a* were quite distinct, the play being simply on the consonants. The words are: "as we watch these kites That *bate* and *beat* and will not be obedient." We may therefore feel sure that long *a* was *not*=(ee). Such allusions are like the heraldic motto *dum spiro spero*.

gravity gravy 2 H⁴ 1, 2, 55 (413, 183).

"*Chief Justice*. There is not a white hair on your head, but should have his effect of gravity.—*Falstaff*. His effect of gravity, gravity, gravity." The mocking joke is entirely lost in the modern (*grav-iti*, *græ-vi*). The old pronunciation must have had the same vowel in each case, (*grav-iti*, *græa-vi*). This instance and the last therefore determine that Shakspeare's long *a* could not have been (ee), and must have been the same as his short *a* lengthened=(aa) or (aah).

ace ass MN 5, 1, 87 (179, 312).

"*Pyramus*. Now die, die, die, die, die. *Dem*. No die, but an *ace*, for him; for he is but *one*." A double pun on *ace*=*ass*, and *ace*=*one*. "*Lys*. Less than an *ace*, man: for he is dead: he is nothing," since 0 is less than 1. "*The*. With the help of a surgeon he might yet recover and

pardonnez moi as (a tun o moi), compare Hart's (pardunah) for *pardonne*, *suprà* p. 802, l. 6 from bottom of text.

fer firr ferret H^s 4, 4, 15 (459', 29).

pucelle puzzle H^s 1, 4, 17 (474', 107).

This is not meant to be an identity, but merely an allusion, as in the following *dolphin* and *dogfish*: "*Puzel* or *Pussel*, Dolphin or Dog-fish. Your hearts Ile stampe out with my Horses heeles." Hence it does not countenance the supposition that the sound of French *u* was impossible to an Englishman. *Pucelle* is spelled *Puzel* throughout in the fo. 1623.

foot, gown, H^s 3, 4, 32 (451, 54).

Katherine's unfortunate mistakes as to these words at least shew the French *ou* was = English *oo* (uu), and French *-on* = English *-oun* (oun), *suprà* pp. 825, 827.

prove an *ass*." This is to the same effect as the last, and is confirmed by Judas Jude-ass LL 5, 2, 299 (157', 629).

bass base TG 1, 2, 61 (23', 96). TS 3, 1, 17 (240', 46). R² 3, 3, 23 (372, 180). Both must have been (baas) as both are now (bees).

Marry! marry R³ 1, 3, 33 (561, 98). RJ 1, 3, 16 (716, 62). The first was the exclamation, Mary! addressed to the Virgin, which therefore could not have been called (Meerrr) as now.

marrying marring MW 1, 1, 12 (42, 25). AY 1, 1, 6 (205, 34). AW 2, 3, 109 (264, 315). This favourite pun, in which the modern *marring* (maarriq) retains its ancient sound, with at most the vowel lengthened, confirms the last remark.

bairns barns MA 3, 4, 21 (124, 49).

"Then, if your husband have stables enough, you'll see he shall lack no *barns*." *Bairns* is only a modern orthography. In AW 1, 3, 10 (257, 28) the first folio reads *barnes*, the second *bearns*, probably only a transposition of the *r*, and the two last *barns*. This therefore gives no information respecting *ai*.

tale tail TG 2, 3, 9 (26', 54). Oth 3, 1, 6 (892, 8). In the first case the joke is so obscure when no difference is made between the sounds of *tail*, *tale*, that Hamner illustrates it with a kick. In the second the first folio reads *tale* in both places, and *tail* is meant probably in both cases. Under no circumstances can we suppose *tale*, *tail* to have had the same sound till the XVIIIth century. See however the quotation from Holyband, *suprà* p. 227, note, col. 2, which seems to indicate an occasional confusion of *ai*, *a*, and also Spenser's rhymes, *suprà* p. 867.

waste waist MW 1, 3, 27 (45, 46). 2 H⁴ 1, 2, 44 (413, 160). Waist is a modern spelling, see *suprà* p. 73, n. 1.

with maid withmade MM 1, 2, 48 (68', 94). "Is there a maid with child by him? No, but there's a woman with *maid* by him." Where there is an allusion to *withmaid* = unmade, ruined. But it belongs to the class of vague allusions on p. 922.

AI, EA, E.

beats baits WT 1, 2, 32 (312', 91). *Leontes* speaking of *Paulina* calls her, "A callat Of boundless tongue, who late hath *beat* her husband And now *baits* me!" Here it is absolutely essential to the cutting sarcasm that *beat*, *bait* should have been differently pronounced. It would make nonsense to say (beet, beets). The modern (biit, beets) preserves the full force of the original. See remarks on *bate beat* p. 923, c. 1.

fair fear VA 1083 (1013). "Having no *fair* to lose, you need not *fear*." This

These are the only puns which I have discovered, though I looked carefully for them, in which *ai* could have the sound of (ee). The three words thus determined are *main*, *hair*, *raisins*. We have no contemporary orthoepical account of these words; but Gill uses (*main*) in composition, and Cheke spells *heiers*. Considering how widely the (ee) pronunciation had spread so early as Hart's time, and that Gill acknowledged though scouted its existence, the number of instances is remarkably small, while the first of the preceding examples, *beat*, *bait*, seems to establish an accepted difference of sound, between *ai*, *ea*, the last of which was undoubtedly (ee).

cónceal'd cáncell'd RJ 3, 3, 29 (729, 98). Rather an allusion than a real play upon words

play on words does not require an identity of sound, and is quite well enough preserved in the modern (feer, fiir).

prey pray H⁴ 2, 1, 26 (388, 89). Here there was an identity of sound, but there is nothing to determine what it was. Gill marks *prey* as (prai) and expressly says that *pray* is not (pree). *main* Maine 2 H⁴ 1, 1, 32 (498, 209).

"Unto the *main*! O father, *Maine* is lost—

That *Maine* which by *main* force
Warwick did win,
And would have kept so long as breath
did last!

Main chance, father, you meant; but
I meant *Maine*,
Which I will win from France, or
else be slain."

The pronunciation was probably (meen) in each case. But it is possible that the English pronunciation of the state of Maine was still (Main). Gill pronounces the rhyming word *slain* (slain).

hair heir CE 3, 2, 41 (101, 127). The joke is rather covert, but still it seems as if this was one of the words in which *ei* = (ee), and this is confirmed by the next example.

here apparent, heir apparent H⁴ 1, 2, 17 (383', 65). We shall find many rhymes of *here* with (eer) although it is one of the words recognized as having (iir), see p. 892. The preceding instance shewing that *hair* was also (heer), the pun is justified, see *suprà* p. 80, note.

reason raisin H⁴ 2, 4, 94 (392', 264). It is probable that *raisin* as a modern French word was pronounced (reez'in), and hence the pun. See *suprà* p. 81, note, col. 1.

best beast MN 5, 1, 69 (178, 232). The difference between the long and short vowels (best, beest) is necessary to make the joke apparent,

which is lost in the modern (best biist). Long (ee) and short (e) frequently rhyme.
 veal, wel *Dutch* LL 5, 2, 121 (154, 247). "Veal, quoth the Dutchman. Is not *veal* a calf?" The identity of both words, as heard by the writer, is evident. They were probably really (veel, bhel).

 art heart TS 4, 2, 6 (245, 9).

 Rhymes will be found to indicate the same pronunciation of *heard*, see also p. 82, l. 17 and p. 86, l. 11.

 civil Seville MA 2, 1, 110 (117, 304).
 I have heard of (sev-il) oranges from a lady who would have been more than 100 were she still alive, so in this case the pun may have been complete. In the xviith century the confusion between (e, i) was frequent, as also in the rhymes of the xivth, (*suprà* p. 271), and we shall find many similar rhymes in Shakspeare. In *spirit*, *syrop*, *stirrup* we have still the common change of (i) into (e), but we cannot suppose that either of these changes was acknowledged.

post pos'd CE 1, 2, 13 (95, 63). "I from my mistress come to you in *post*: If I return, I shall be *post* indeed. For she will score your faults upon my pate." Dyce (9, 330) explains this to be "an allusion to keeping the score by chalk or notches on a post; a custom not yet wholly obsolete." May not the latter word be *posed*, having a *pose* or pain or cold in the head?
 sore soar RJ 1, 4, 7 (716', 20).
 Moor more MV 3, 5, 12 (196', 44).
Moor may have been indifferently

(moor, muur), as at present indifferent (*moor*, *muur*).
 Pole pool 2 H⁶ 4, 1, 25 (515', 70). The name Pole is still generally called (Puul). The name GEFREYE POOLE, 1562, with *oo*, may still be read on the walls of the Beauchamp Tower in the Tower of London.
 wode wood MN 2, 1, 24 (165', 192).
Wode meaning mad, is not now distinguished from *wood* in Yorkshire, both being called (*wød*).
 Rome roam H⁶ 3, 1, 11 (480, 51).
 "Bishop of Winchester. Rome shall remedy this. *Warwick*. Roam thither, then." This pronunciation, says Dyce (9, 367), "may perhaps be considered as one of the proofs that Shakspeare was not the author of that play." But the existence of the pun shews that the old Chaucerian (*oo*) of (*Roome*) was still known, though the final (e) was dropped. See next entry.
 Rome room KJ 3, 1, 27 (341', 180). JC 1, 2, 38 (766, 156). Both these allusions are in passionate stately verse. They are generally assumed to determine the sound of *Rome* as (*Ruum*). See *suprà* p. 98, last line, p. 101, line 1, p. 102, line 23. Dyce (*ib.*) quotes the same pun from Hawkins 1626, and from the tragedy of Nero 1607, and the rhyme *tomb*, *Rome* from Sylvester 1641. To these we may add Shakspeare's own rhymes: *Rome doom* RL 715 (1021). *Rome groom* RL 1644 (1029). Bullokar also writes (*Ru'm*). It is however certain that both pronunciations have been in use since the middle of the xviith century. (*Ruum*) may still be heard, but it is antiquated; in Shakspeare's time it was a fineness and an innovation, and it is therefore surprising that Bullokar adopted it.
 sole soul TG 2, 3, 1 (26', 19). MV 4, 1, 29 (198, 123). RJ 1, 4, 5 (716', 15). JC 1, 1, 6 (764, 16). Possibly both were called (*sooul*), see *suprà* p. 755, and note 3. In his list of errata Gill corrects his *oul* = (*ool*) to *oul* = (*ooul*) in the word *gold* "idque quoties occurrit, cum similibus fœduld, hœuld, &c." It will be seen, however, that (*oo*) often rhymes with (*oou*) in Shakspeare.
 so sew TG 3, 1, 88 (33, 307). "*Speed*. Item: She can sew.—*Launce*. That's as much as to say, can she so?"

This is a similar confusion of (oo, oou). When we consider that at present (oo, oou) are seldom distinguished, we cannot be surprised.

If so, this play on words corroborates the external testimony that Shakspeare's pronunciation of short *u* was (*u*). Compare: muddled in Fortune's mood, AW 5, 2, 1 (276, 4), and: muddy rascal 2 H¹ 2, 4, 13 (419, 43), and see Mr. White's Elizabethan pronunciation, *infra*, under U. too two R¹ 4, 4, 109 (544', 363).

This shews that the final -y was often (æi), as Gill makes it, and as it will be seen to rhyme most frequently (not always) in Shakspeare. The passage is quoted above in the text adopted in the Cambridge Shakspeare, where the stage direction is inserted. The first fo. reads: "*Proteus*. But

The third of the five vowels, if you repeat them; or the fifth, if I.—*Hol*. I will repeat them,—a, e, i.—*Moth*. The sheep: the other two concludes i:—o, u." Here the name of the vowel *i* is identified with the pronoun I, which presents no difficulty, and the name of the vowel *u* with the pronoun *you*, and perhaps the sheep *eue*, the first of which is opposed to the pronunciation (yy), which all writers down to Wallis give to the French vowel, except Holyband, *supra* p. 228, note, col. 2, l. 14. The pun is quite reconcilable with our modern pronunciation of *u*, *you*, *eue*, but see the last two words in the vocabulary pp. 889, 910. It would perhaps be unwise to push this boy's joke too far. *Moth*'s wit, which did not scruple about adding on a consonant to convert *wittol* into *wit-old* in his next speech, might have been abundantly satisfied with calling the vowel (jyy). See, however, the rhymes on long *u*, *uo*, *eue*, *ieu*, and *you*; and the observations on Shakspeare's pronunciation of long *u*, in the introduction to the specimen at the end of this section.

This examination of puns has not resulted in any real addition to our knowledge. It has confirmed the value of long *a*=(aa) or almost (aah) and quite distinct from (ee). It has rendered rather

doubtful the exact pronunciation of *ai*, making it probably the same as (ee) in three words, generally different from (ee), and occasionally approximating to (aa). It confirms the use of *ea*, *oa*, and of *ôl* as (ooul). In the case of *mud*, it implies the general pronunciation of short *u* as (*u*). It confirms the identity of sound in *I*, *eye*, *aye*. It shews that long *i* and the pronoun *I* were identical, and that long *u* and the pronoun *you* were either identical or closely related. It is evident that without the external help we should have been little advanced.

SHAKSPERE'S METRICAL PECULIARITIES.

My collections have not been made with sufficient care to give a full account of Shakspeare's metres, which would have also required more space than could be given to it in a work already overswollen. My attention has been chiefly directed to three points, and that only from the beginning of the Histories. These are, the number of measures in a line, the number of syllables in a measure, and the position of the accent in words. These are necessary to determine the existence of a dissyllabic pronunciation where a monosyllabic now prevails, (or, as it may be called by an inversion of the real process, of resolution,) and to understand the rhymes. All my shortcomings in this respect, however, will be abundantly made up by the third edition of the Rev. E. A. Abbott's *Shakespearian Grammar*,¹ which was passing through the press at the same time as these sheets. I shall have to make frequent reference to the chapter on Prosody, but as the work is indispensable to all my readers, I shall merely give Mr. Abbott's results, and leave the proofs to be gathered from his own accessible pages. On much relating to rhythm and scansion of lines there is some divergence of opinion between Mr. Abbott and myself, owing to the very different points from which our observations and theories take their rise, but the instances which he has collected and classified, and the explanations which he has given, must be fully considered by any future writer on the subject.

I regret that I did not note the lines containing a defective first measure, as these had been made a special study in Chaucer's prologue. In the preface to the Cambridge Shakspeare, vol. i, p. xvii, the following are quoted:—

No, I will not, for it boots thee not. What? TG 1, 1, 9 (21, 28).

Fire, that's closest kept, burns most of all. TG 1, 2, 22 (22', 30).

Is't near dinner time? I would it were. TG 1, 2, 37 (23, 67).

Twelve year since, Miranda, twelve year since. T 1, 2, 14 (2', 53).

which, however, are none of them entirely satisfactory. In the

first edition, 1869, pp. 136. Revised and enlarged edition, 1870, pp. xxiv, 511. The Prosody, which only occupied 10 pages in the first edition, is expanded to 102 pages in the third. In the above text this 1870 edition will be cited as *Abb.*, with a number annexed referring to the section.

first case the editors have accidentally omitted to notice the final *what?* which renders the line entirely defective. If we read, *What not?* or *what boots not?* the line would have only a third place trissyllabic measure. Thus, italicising the even measures,

No, I *will not*, for it boots *thee not*. What boots not?

The numerous instances cited below of the dissyllabic use of *fire* and generally the syllabic value of *r*, renders the second and fourth instances incomplete. The objection raised by the editors "that one word should bear two pronunciations in one line is far more improbable than that the unaccented syllable before *twelve* is purposely omitted by the poet," is not tenable. The word *year* might be dissyllabic in both places, a trissyllabic fifth measure being not uncommon, and the use of the same termination sometimes as two distinct metrical syllables, and sometimes as part of a trissyllabic measure, is extremely common. We have it in two consecutive lines in

It is religion that doth make vows kept;

But thou hast sworn against religion. KJ 3, 1, 53 (342, 279).

Be patient, gentle queen, and I will stay.

Who can be patient in such extremes? 3 II^o 1, 1, 109 (528, 214).

In the third example, the simple resolution of *is't* into *is it*, by the editors in their text, saves the metre. In the second we might also read *that is*. And in the last example an initial '*Tis* may have dropped, as Pope suggests. These considerations serve to shew how cautious we must be, and how large a comparison of instances has to be made, before we can decide on such a point. It is from this feeling that I have thought it advisable to accumulate instances, and classify them as well as possible. Resolutions, trissyllabic measures in every place, real Alexandrines,¹ and lines with two superfluous syllables, are well established, by the following collections. Defective first measures have still to be traced.² The

¹ The line: *Ay*, and we are betrothed; nay more our marriage hour, TG 2, 4, 93 (28, 179), cited by the editors of the Cambridge Shakspeare as an instance of the "irregularity" of "a single strong syllable commencing a line complete without it," is a perfect Alexandrine, with the complete pause at the end of the third measure, and is so printed in their text. In the preface they put the *Ay* into a single line, and reduce the rest to five measures by reading *we're*. This instance is, however, complicated by the previous imperfect line: *But she loves you*, on to which the first words of this speech; *Ay, and we are betrothed*, might be joined, completing the verse. So that we really have one of those cases where "when a verse consists of two parts uttered by two speakers, the latter part is frequently the former part of

the following verse, being as it were, *amphibious*," Abb. 513; where numerous instances are cited. These sections belonging to two lines might be conveniently termed *amphistichs*. In this case, to consider "*Ay*, and we are betrothed," as an amphistich, would be to confirm the Alexandrine nature of the second part. The following instances, cited by Abb. ib., are then precisely similar; the amphistich is italicized. HOR. Of mine own eyes. MAR. *Is it not like the king?* HOR. As thou art to thyself. H 1, 1, 42 (812, 58). HAM. No, it is struck. HOR. *Indeed? I heard it not*: then it draws near the season. H 1, 4, 5 (816, 4).

² Then the whining schoolboy with his satchel AY 2, 7, 31 (214, 145), seems a clear instance, but in the Globe edition the editors of the Cambridge

whole subject of English metres requires reinvestigation on the basis of accent. The old names of measures borrowed from Latin prosodists are entirely misleading, and the routine scansion with the accent on alternate syllables is known only to grammarians, having never been practised by poets.¹

The reader should study the passages cited in *Abb.* 479a-486. bott suggests, this accent is not needed for the scansion], porténts, precépts, prescience, recórd [still so called in law courts], sepúlchre, sinister, sojóurn'd, something?, sweetheárt, triúmphing, untó, welcóme, wherefóre. (463' 27), and TA 1, 1, 36 (690', 231), unless we read "Patrici-ans and pléb-eians we create," the italics shewing a trissyllabic measure; in C 1, 9, 1 (661, 7) I would rather read "That with the fusty *plébéians* hate thine honours," than "That with the fusty *pléb-eians* hate thine honours," the italics again shewing the trissyllabic measure; in C 3, 1, 53 (669', 101), I read "Let them have cushions by you. You're *plébéians*," and Mr. Abbott's scansion seems forced; again, "the senators and *plébéians* love him too," C 4, 7, 7 (681', 30), but AC 4, 12, 4 (936, 34) "And hoist thee up to the shouting *plébéians*," (unless we read *unto* with Keightley and make a trissyllabic measure: And hoist thee up unto the shouting *plébéians*.) and C 5, 4, 12 (685', 39) "The *plébéians* have got your fellow tribune," (which could be easily amended by adding *fast*, or *now*, or *there*, at the end of the line, in which case there would be a trissyllabic first measure,) seem real cases; but they are the only ones in Shakspeare and, as we have seen, the reading may be faulty!], púrsuit, púrvveyor, quín-tescence, récorde, rélapse?, rhéumatic, sécure, séquester'd, succéssor, succés-sive, tówards, útensils?, without.

In this connection the following extracts from Gill's *Logonomia*, pp. 128-138, are valuable, though they are much injured by his confused notions of the difference between accent and quantity.

GILL ON ACCENT AND METRE.

Cap. xxv. *De Accentu.*

Vocum prosodia vsu potius quàm regulis percipitur: ea tota in accentu est. Accentus est duplex, Grammaticus, *et* Rhetoricus. Grammaticus est qua vocalis vna, aut diphthongus, in omni dictione affecta est. Rhetoricus, qui ad sensum animo altius infigendum, emfasin in vnâ voce habet potius quàm aliâ. Monosyllaba omnia per se accepta accentum acutum habere intelliguntur: at composita, nunc in priori tonum habent; vt, (hors·man, ship·huuk), nunc in posteriori; vt (withstand·, withdraa·, himself·). Quædam ita facilia sunt, vt accentum vtrobius recipiant, vt (tshurtsh·yard·, out·run·, out·raadzh·).¹

Dissyllaba quæ oxytona sunt, (biliiv·, asyyr·, aswaadzh·, enfoors·, konstrain·): quæ paroxytona, vt (pîr·i, kul·er, fol·oou).

Trissyllaba quædam paroxytona sunt: vt, (regraat·er, biluv·ed, akwaint·ed); quædam proparoxytona; vt (mîz·erî, des·tenî): quædam indifferentia; vt, (foar·goo·ing, foar·staal·er).²

Animaduertendum autem nos tanto impetu in nounullis vocibus accentum retrahere, vt nulla syllabarum longitudo, naturâ aut positione facta contraheniat: idque non in nostris tantum (for·ester, kar·penter): sed etiam in illis quæ doctuli à Latinis ascuerunt: vt, (aa·dîtor, kompet·îtor, kon·stansî, redzh·îster, tem·perans, in·stryy·ment, mul·tityd). Hic autem duplici cautelâ opus: primâ, vt illa excipias quæ ad nos integra transierunt; quibus eâ humanitate vtimur qua peregrinis, qui suo iure *et* more viuunt, vt (Amin·tas, Erin·nîs, Barika·do). Secundò excipias illa à Latinis in io, quæ quanquam in nostrum ius concesserunt, proprium tamen accentum retinent in antepenultimâ; vt (opin·îon, satisfak·sîon) et alia sic exeuntia (mîn·îon, fran·îon), etc.³

Plurisyllaba etiam (quod in alijs quas scio linguis non fit) accentum sæpius in quartâ recipiunt; vt (ok·yypeier, vidzh·ilansî, lit·eratyyr): *et* omnia fere illa quæ in (muqger)⁴ exeunt aut (abl): vt (kos·terdmuqger, ei·ernmuqger, mar·tshantabl, mar·idzhabl, mîz·erabl, on·orabl). mirum dixeris si tonum in quinta repereris, tamen sic lege (mul·tîplîabl, vit·rîfîabl, Kon·stantînopl), *et* alia fortasse plura.

Duo sunt quæ tonum variant: Differentia, *et* Numerus poeticus.

1. Differentia est, qua vox voci quodammodo opponitur: hæc accentum transfert in syllabam vulgariter accentuatæ præcedentem, vt (du

¹ Gill does not mark the position of the accent in these three words. In those subsequently cited he marks it by an acute on the vowel of the accented syllable, and neglects to distinguish long and short vowels in consequence, as he says in his errata: "Capite 25 et deinceps; accentuum notatio longarum vocalium quantitati veniam inueniet." I have, therefore, in my transcription restored the quantity, and replaced *i* by

j (=ei) and *u* by *v* (=yy), when it appeared necessary.

² Gill writes no accent marks in these two words.

³ The term *antepenultime* here determines the dissyllabic character of the termination *-sion* = (*-sion*) in Gill's mind.

⁴ Gill does not distinguish (muqger) from (muqer); my transliteration is, therefore, also an interpretation.

yuu taak mii rēikht, or mīs'taak mii?) sic (wīth·hōould, un·thaqkful, dīs'onestēi, dīs'onorabl, dīs'onorablēi) etiam, et (un·meezyrablēi); huc refer (dezert·) meritum, et (dez·ert) desertum aut solitudo, etc Numerus poeticus proparoxytonis in [i] sæpe vltimam productam acuit, vt, (mizerēi·, konstansēi·, destīnēi·);¹ vnde etiam in prosā ferē obtinuit, vt vltimā vel longā vel breui æqualiter scribantur, et pronuncientur, non acuantur tamen.

De Rhetorico accentu difficilius est iudicium; quia suum cuique est, et varium. Exemplo res melius intelligetur.

(Mōi song, if an·i ask whuuz grii·vus plaint iz sutsh,
Dōi, eer dhou let hīz naam· bii knooun, hīz fol·i shoouz tuu mutsh,
But, best weer dhii tu hēid·, and nev·er kum tu lēikht:
For oon dhe erth· kan noon but ēi·, dhēin ak'sents sound arēikht·.)

Diximus monosyllaba omnia acui, hoc est accentu Grammatico: at in orationis contextu illis tantum vocibus est accentus oratorius, siue quædam toni *ἐνέργεια*, quibus sensus vis et *ἐνάργεια* inest: reliquæ omnes præ his quodammodo barytonæ habeantur. Ego igitur sic ista lego, vt versus primus vno tenore, et æqualis fluat. In secundo tribus voculis accinitur (dōi, naam·, fol·i): quia, ex sensu apparenti moriendum potius est carmini, quàm nomen auctoris indicandum; cui tanta stultitia malum est omen. At ex implicitā Antanaciasi, sine diastola *Τῶν* (dōi·), et (er, let dhou hīz naam bi knooun Dōi·er); etiam cum priori tepidius erit, et sine accentu oratorio offerendum. Duos sequentes versus licet ego sic legam, vt (hēid), et (nev·er) in priori accentuem: (erth·, ēi), et (dhēin),² in posteriori: alius tamen fortasse aliter: idque cum bonā vtrique ratione. Atque hæc de accentu acuto Grammatico, et Oratorio, præcepta sunt. Grauis ubique intelligitur, vbi alius non est accentus. Circumflexus [^] in alijs dialectis frequentius auditur quàm in communi; vbi tamen ea est aliquando vocis alicuius prosodia, vt sensum mutet. Exemplo (ēi am afraid· of him) i. metuo ab illo: (ēi am afraid·³ ov him). i. quid de illo futurum sit timea.

Accentui inseruiunt interpunctiones: quia illæ vt sensum aperiunt, ita quantum possunt accentui viam sternunt. Eædem sunt nobis quæ Latinis, et vsus idem: sunt autem *Κόμμα* siue incisum [,], *Ῥποδιαστολή* aut subdistinctio [;], *Κῶλον* siue membrum [:], *Περίοδος* siue sententiæ et sensus integra complexio [.] His adijunge interrogationis notam [?] et exclamationis [!]. *Παρενθέσει* (scientibus loquor) nihil includi debet quod cum villā

¹ The accent is not written here, but is inferred from the context. Observe that we had (des·tens) a little above.

² Erroneously printed (dēin).

³ Gill writes *afraid·*, *afraid·*. He had long previously explained *ā* to mean (AA), and hence I have thus interpreted the sign, but the interpretation is probably incorrect. He has nowhere given a physiological description of the

effects which he means to indicate by the old Latin terms, acute, grave, and circumflex, which were perhaps in Latin the rising, the falling, and the rising and falling inflections, (· · · ·) suprā p. 12, but there is no reason to suppose that he had in view anything but *stress* for acute, its absence for grave, and a broadening i.e. opening or rounding or else excessive lengthening of the vowels for the circumflex.

Huc accedit Ἀπόστροφος in (dh- efekt'),² et in vocibus compositis Τφή siue maccaf [-] vt (hart-eeting griif). Et vltimò (si tu concedas (lector) in Διαίρέσει, Διαστολή [-] in συναίρέσει, Ἀρπη [-] vt in (okaa'zion) trissyllabâ;⁴ sed his et 'Τποπαρενθέσει in vsu frequenti, locus rarò conceditur.

Cap. xxvi. De Metro.

Metrum apud nos largè acceptum, aliquando significat ipsa in carmine omoioteleuta: nonnunquam ponitur pro omni oratione adstricta numeris; sic enim metrum, et prosam opponimus. Sed hîc pro omni mensurâ syllabæ, pedis, metri propriè dicti, et carminis vsurpo.

De Syllaba.

Syllabarum quantitas septem modis agnoscitur. 1. Vocali. 2. Diphthongo. 3. Accentu. 4. Positione. 5. Derivatione. 6. Præpositione. 7. Metaplasmo.

1. Vocalis et 2. Diphthongus.

Satis aparuit in grammaticâ, quæ syllaba longa aut brevis censeri debet, ex vocalibus, quas longas aut breues esse diximus: 1. Poetæ tamen illa in (oi) desinentia licenter corripunt; quia in fluxu orationis accentus in pròpinquâ syllabâ eius longitudinem absorbet. At si syllaba accentu vîlo grammatico, vel rhetorico afficiatur, non corripitur; vt, (møi moni) - - -.

2. (Yy) in fine anceps est; vt (nyy, tryy):⁵ at consonâ in eâdem voce monosyllabâ sequente, longa est; vt, (syrr,⁶ pyrr). sic in dissyllabis, si accentum habeat: vt, (manyrr', refyyz') verbum: at accentus in priori, ultimam ancipitem relinquit; vt, in (ref'yyz, ref'yz)⁷ subst. 3. Vocalis, aut diphthongus, ante vocalem non cor-

¹ This is a sign not otherwise noticed, probably of Dr. Gill's own coinage, for the printer had clearly to "make" the mark, the first time from (and ;, the second time, in the example, from ; and ;.

² The original has "(Dhe (best said nii) dhat), etc., where the parenthesis is clearly incorrectly put.

³ Gill prints δ'efekt.

⁴ Gill seems to intend to say that (okaa'zion), which is really of four syllables, here reckons as three, from

the rapidity with which (i) is pronounced. See infra, p. 937, n. 1.

⁵ This vowel being represented by v in Gill never has the mark of prolongation placed over it; hence it has been uniformly transliterated (yy). A pure (y) in closed syllables does not seem to have occurred in English of so late a date.

⁶ Observe, an (s) not an (sh), and see *sutor*, supra, pp. 215, 922.

⁷ The word is only written once *réfyz* in Gill, but is repeated here to exhibit the "doubtful" quantity.

ripitur necessariò ut apud Latinos. Sed contrà, vocalis longa, aut diphthongus, ante vocalem semper producitur, si in se accentum habeat, vt (denoising, displaied).¹ 4. Vocalis, aut Diphthongus per synalœpham licentiâ poeticâ nonnunquam intercipitur: sed frequentissimè intercudit (u), in (tu) dativi *et* infinitivi signo; *et* (e), in articulo (dhe), tamen non semper. in (Dhou) ante (art) diphthongus sæpe deficit.²

3. Accentus.

Omnis syllaba, accentum acutum habens aut circumflexum, longa est: idque maxime si syllaba dictionis prima non sit. Nam prima naturâ suâ brevis, accentum sæpe admittit, vt (go'ing, du'ing, an'i, spir'it, bod'i), quæ etiamsi ex vocali breues esse intelligantur, accentu tamen subinde communes fiunt vt in illo Choriamb (Laa'di, ladii').³

2. In trissyllabis etiam, acutus in breui ante liquidam, syllabam aliquando ancipitem facit, vt in (mal'adai, sim'oni, dzhen'eral, ben'efit.)⁴

3. Vocalis brevis in vltimâ, ante duplicem, aut etiam ante solam liquidam, accentu anceps fit. Vt (beg'in, distil', defer, prolog'). Idipsum etiam in monosyllabis accentu acutissimis fiet; vt, (aks', dzhudzh', fel', sin', soq', war', dzhar'.) Quam formam quædam etiam ante mutam sequuntur; vt, (bud') gemma, (but') meta.

4. Omnis syllaba ante accentuatam brevis est: vt, (dezair', abroo'ad (?), abandon, devoi'ded, divain'loi, biliiv'ing, prevented): nisi obstet natura; vt, in (foorgo'ing, foorspee'king); aut positio, vt, (forgot'n forgiv'iq). Sed hic tantum valet accentus, vt in multis duplicatis alteram elidat, vt, (atend', apii'riq, opoo'zed, adres'ed); pro (attend; appii'riq, oppoo'zed, adres'ed): Sed vt consonam elidat vel non, poetæ in medio relinquitur.

5. Syllabæ quæ solis constant consonantibus, quia accentum nunquam recipiunt, breues iudicantur; vt, (sad'l, trub'l, moist'n).

6. Accentus Rhetoricus longas præcedentes sæpenumero corripit: vt, (If yi bi aal thiivz, what hoop hav oi?) vbi vocales naturâ longæ in (yii, bii, haav) ratione accentuum in⁵ (aal) *et* (oi) correptæ sunt.

4. Positio.

In diuersis dictionibus positio sæpe valet vt apud Latinos, in eâdem dictione, accentus positioni præualet; ita vt in trissyllabis,

¹ As Gill could not have used the word diphthong in the sense of digraph, more especially because he represents the (ai) in the first word by a simple sign *j*, we have here a confirmation of the theory that he pronounced his *a* as a diphthong (ai), and not as a simple vowel (ee).

² This implies the pronunciation of *thou'rt* as (dhart) and not (dhourt).

³ No accent marked in Gill. The assumption of the choriamb - ' - ' - ,

shews that the accents were intended as I have placed them. This passage should have been referred to suprâ p. 281, l. 34.

⁴ The exact meaning of this passage is doubtful, owing to the constant confusion of accent and quantity in Dr. Gill's mind, while he attempts to separate them.

⁵ Misprinted *in*, as if it were one of the English words, being put into a different type.

accentus in primâ sonorâ naturâ aut positione longâ, abbreviet utrasque sequentes; vt, in (Tshes·tertun, Wîm·bldun). Nec quisquam, qui Anglicè nouit, negare audebit (Ten·terden stii·pl) esse carmen Adonicum. nam hîc adeo violentus est accentus, vt etiam in diuersis dictionibus positionem auferat. Idipsum affirmabis, si Sussexios audias in (WAA·terdoun for·rest).¹ Adeo clarus est accentus in primo trissyllabo, licet positione non eleuetur. Hîc tamen cautelâ opus, nam si ad positionem (l, n) vel (q) concurrat, media syllaba producit: vt (Sem·priqam, Trum·piqtun, Ab·iqton, Wîm·undam, Wîl·fulnes) etc.² Quod dixi apparebit exemplo.

(What if a daai, or a munth, or a Jeer) hemistichium est, duobus constans dactylis, et choriambo, nemo dubitat. (Soo it befel· on a Pen·tekost dai). Nec quisquam hîc magnopere hæret, nisi quod particula (it) tardius sequi videtur ob positionem: at Metaplasmo occidentali (ivel·) pro (bifel·) nihil occurrit rotundius; nam positio illa in (kost), nullo modo tempus retardat propter accentum in (Pen). Positio aliàs valet ad Longitudinem; vt, (Gîlz·land, Lon·don, har·vest).

5. Deriuatio.

Deriuatiua eandem cum primitiuis quantitatem plerumque sortiuntur; vt, (dai, dai·iq; dezair·, dezair·ed; profaan·, profaan·lœi). Excipiuntur illa, quæ à longis enata, vocalem naturâ longam corripunt; vt, a (mair·zer, mîz·erabl, mîz·eri): Et anomala coniugationis primæ, quæ figuratiuam comutant: vt, à (reed, red); à (sweet, swet); à (wroit, writ; strœik, strîk), etc. His adde vnum tertiæ (duu, did). Secundo excipiuntur illa à peregrinis deducta, quibus syllabarum quantitas naturâ, positione, aut accentu mutatur; vt à noto as, (tu noot·ei),³ à magnifico (tu mag·nifai), à potens, (poo·tent) etc. At (im·potent, omni·potent), suam naturam sequuntur: quod etiam in alijs fortè pluribus obseruabis.

6. Præpositio.

Præpositiones inseparabiles (a, bi, re), etiam (un, dis, mis) si positio sinat, corripuntur. Reliquarum omnium quantitas ex suis vocalibus satis intelligitur.

7. Metaplasmus.

Est, quum necessitatis, aut iucunditatis gratia, syllaba, aut dictio à formâ propriâ in aliam mutatur. Huc refer omnes antedictas dialectos præter communem. Et licet omnis Metaplasmus ad syllabarum quantitatem agnoscendam non sit utilis: tamen quia plurimæ eius species hîc multum possunt, eas omnes simul explicabimus.

¹ Written *Wdterdoun*, the first vowel probably stands for *æ* = (AA·) in Gill's notation.

² In the vocabulary I have introduced a second accent mark thus (Sem·priq·-

am), to represent this presumed lengthening.

³ There seems to be some misprint here; the original is followed literally, with the exception of the accents, which were not marked.

Prothesis apponit caput id quod Aphæresis aufert:

Neque enim verum est quod scribit quidam, Syllabarum regnum illis concessum, qui primi suo exemplo illarum quantitatem definirent: Syllabæ enim naturâ suâ; id est, cuiuscunque linguæ idiomate, aut longæ sunt, aut breues, aut indifferentes, vtcunque mali poetæ illarum quantitate abutuntur.

¹ These are accentual hexameters, the author not named. Hence the final (-sion) of (habitaa'sion) reckons as a single syllable. Compare *suprà* p. 934, note 4.

² This requires much forcing of the stress to make an accentual hexameter, thus: (Aal gal'ant vir'tyyz, Aal kwal'itiz of bod'i and sooul). Gill doubles the (l) in (kwal'itiz) to make "position."

³ Probably (whatsoever, okaa'zion), but the actual "synæresis" is not written. There can be no thought of (okaa'zhon), which was probably never used, the (aa) having changed to (ee) before (z) was reduced to (zh). The pronunciation (whatsoever) is quite conjectural, as there is no authority for it. The hyphens represent Gill's apostrophes.

Sed si syllaba brevis vnus temporis concedatur, longa duorum; ego veritatem appello indicem, auresque musicorum testes: his causam omnem permitto. "The tendency to contractions [in the Lancashire dialect] is very great, rendering some sentences unintelligible to a 'foreigner.' *Luthie preo* (look thee, pray you): *mitch goodeetoo* (much good may it do you)." *Folk-Song and Folk-Speech of Lancashire*, by W. E. A. Axon, F.R.S.L., page 69. In a private letter Mr. Axon informs me that these phrases are pronounced, (ludh'i prii'u; mitsh gud'iitu) the last (ii) being long but unaccented. In the north (dii) is very common for (duu), so that the analysis of the words is (mitsh gud-dee-it-u). (Ludh'i) is also heard in Yorkshire.

² Probably a misprint for (dheer) in both cases.

³ This refers to "Cap. xxvii., Carmen Rythmicum," which would have been interesting, had not Dr. Gill's utter confusion of accent and quantity rendered it entirely worthless. Thus speaking of heroic and Alexandrine verses he says: "Scenicum, *et* Epicum, vno ferè carminis genere contenta sunt: illud est vt plurimùm pentametrum. Spenceri tamen Epicum, siue Heroicum, nonum quemque versum habet hexametrum: ad grauitatem, *et* quandam stationis firmitudinem. In scenico, poetæ malè negligunt *δμοιοτέλευτα*, quæ in Epico continuasunt." &c., p. 142. In Cap. xxviii., Dr. Gill treats "De Carminibus ad numeros Latinorum poetarum compositis."

Pedes, quibus Anglica poesis vtitur, sunt dissyllabi tres; spondeus - -, trocheus - -, iambus, - -. Trissyllabi quinque; tribrachus - -, molossus - -, dactylus - -, anapæstus - -, amphimacrus - -. Tetra syllabos tantum duos animaduerti: quorum vnus est pæon quartus - -, alter choriambus - - -.

CONTRACTED WORDS.

The following list is taken from *Abb.* 460-473. All omitted syllables are here inserted in parentheses. A star * prefixed, shews that this contraction is acknowledged either in the same or a similar word, by Jones 1701, and will be found in the Vocabulary of the xviiith century to be given in Chapter IX. When † is prefixed, the instance is not from Shakspeare himself. A subjoined (?) indicates that the passage cited in proof does not appear decisive.

Prefixes dropped. — *(em)boldened, *(a)bove, *(a)bout, (up)braid, †(re)call, (be)came, (be)cause, (con)cerns, (de)cide, (re)cital, †(re)collect, (be)come?, (en)couraging, *(ac)count, *(en)dear(e)d, (be)fall, (be)friend, (a)gain(st)-giving, (mis)gave?, (be)get, (a)gree, (be)haviour, (en)joy, *(a)larum, (a)las, (be)lated, (un)less, (be)longs, (be)longing, *(a)miss, *(a)mong, (be)nighted, *(a)nointed, *(an)noyance, (im)pairs, *(im)pale, *(ap)parel, (com)plain, (en)raged, *(ar)ray, *(ar)rested, *(as)sayed, *(e)scape, (ek)seuse = excuse, (in)stalled, †(fore)stalled?, *(a)stonished, (de)stroyed, *(at)tend, (re)turn, *(al)lotted, un(re)sisting?, (be)ware, (en)vironed, (re)course, (re)venge. In some cases, where the contraction is not written, Mr. Abbott assumes it, although the use of a trissyllabic measure would render it unnecessary.

Other contractions. — Barthol(o)mew, Ha(ve)rford, †dis(c)i(ple), ignom(in)y, †gen(tle)man, gentl(e)man, gent(le), †eas(i)ly, par(i)lous = perilous, inter(ro)gatories, can(dle)stick, †mar(ve)le, †whe(th)er, God b(e)with ye, see *supra* p. 773, in (hi)s, th(ou) wert, you (we)re, h(e) were, y(ou) are, she (we)re. In these five last cases, notwithstanding the orthography, the sound may have been, (dhou-rt, juu-r, xii-r, juu-r, shii-r). But in the passage cited for *she (we)re*, "Twere good *she were spoken* with: for she may strew," II 4, 5, 6 (836, 14), the trissyllabic measure, which would be naturally introduced by any modern reader, obviates all difficulties. Similarly in the passages cited for *this* = *this is*, a trissyllabic measure removes all difficulties. Mr. Abbot says (461),

"it (this contraction) is at all events as early as Chaucer, *Knichte's Tale*, 233." On referring to the *six-text* edition, v. 1091, we find three MS. (Hengwrt, Cambridge, Lansdowne,) to which we may add Harleian, reading in various spellings, "We mote endure it this is the schort and playn," where we may either contract "endure't," or make *is the schort* a trissyllabic measure; but the Ellesmere MS. omits *it*, which seems the best reading, as the *it* is clearly superfluous, and the Corpus and Petworth omit *the*, which is not so commendable. Hence it is by no means clear that Chaucer ever said *this for this is*. Relying on the provincialism 'se, 's for *shall*, in KL 4, 6, 85 (873, 246), and Lady Capulet's *thou's* for *thou shall*, which was evidently an accommodation of her language to the nurse's, RJ 1, 3, 6 (715, 9), Mr. Abbott would avoid several trissyllabic measures, by reading *I'se* for *I shall*, but this does not seem advisable. Wi(th), †w(ith) us, †w(ith) ye, were probably (wî, wîus, wî:rî). To these he adds d(o)off, d(o)on, d(o)out, proba(b)l(e).

Words contracted in pronunciation. — *Abb.* 462, desirous of limiting the use of trissyllabic measures and Alexandrine verses as much as possible, suggests many elisions which often appear doubtful, and are certainly, for the most part, unnecessary. A grammarian who would count the syllables of Italian or Spanish verses on his fingers, would be led to conclude that final vowels were always elided before initial vowels, and that frequently a whole word, consisting of a single vowel, was lost in pronunciation. Turning to the musical setting of Italian words, and seeing only one

note written for the two or three vowels which thus come together, he would be strengthened in this opinion. But if he listens to an Italian singing or declaiming, he would find all the vowels pronounced, sometimes diphthongizing, but, as a rule, distinctly audible, without any connecting glide. Such open vowels are, however, generally pronounced with extreme rapidity, and perhaps this is what Mr. Abbott means by "softening," a term which he frequently uses in a manner phonetically unintelligible to me, thus: "R frequently *softens* or *destroys* a following vowel, the vowel being *nearly lost* in the burr which follows the effort to pronounce the *r*," Abb. 463, as alar(u)m, warr(a)nt, flour(i)shing, nour(i)sh, barr(e)ls, barr(e)n, spir(i)t; "R often *softens* a preceding unaccented vowel," Abb. 464, as confid(e)rates; "Er, El, and Le final *dropped* or *softened*, especially before vowels and silent *h*," Abb. 465. "*Whether* and *ever* are frequently written or pronounced *wh'er* or *whers* and *e'er*. The *th* is also *softened* in *either*, *hither*, *other*, *father*, etc., and the *v* in *having*, *evil*, etc. It is impossible to tell in many of these cases *what degree* of 'softening' takes place. In 'other,' for instance, the *th* is so *completely dropped* that it has become our ordinary 'or' which we use without thought of contraction. So 'whether' is often written 'wh'er' in Shakespeare, *Some, but it is impossible to say what, degree of 'softening,'* though not expressed in writing, seems to have affected *th* in the following words, *brother*, *either*, *further*, *hither*, *neither*, *rather*, *thither*, *whether*, *whither*, *having*," Abb. 466, where he cites instances, which might certainly all have been used by a modern poet who naturally speaks the words dissyllabically. A few words as *or*, *ill*, *e'er*, have established themselves. It is impossible to say what liberty of contraction or change the xvth century poets allowed themselves in verse. "*I* in the middle of a trisyllable, if unaccented, is frequently dropped, or so *nearly dropped* as to make it a favourite syllable in trisyllabic feet," Abb. 467, where he cites, punishment, cardinal,

willingly, languishing, fantastical, residue, promising;—easily, prettily;—hostility, amity, quality, civility;—officer, mariners, ladyship, beautiful, flourishes, par(i)lous. "Any unaccented syllable of a polysyllable (whether containing *i* or any other vowel) may sometimes be *softened* and almost *ignored*," Abb. 468, as barbarous, company, remedy, implements, enemy, messengers, passenger, conference, majesty "a quasi-dissyllable," necessary, sacrificers, innocent, inventory, sanctuary, unnatural, speculative, incredulous, instruments. It is hardly conceivable that these vowels were habitually omitted in solemn speech. Abb. 469, thus explains the apparent docking of a syllable in proper names. Abb. 470, makes power, jewel, lower, doing, going, dying, playing, prowess, etc., frequently monosyllables or "quasi-monosyllables." Abb. 471, remarks that "the plural and possessive cases of nouns in which the singular ends in *s*, *es*, *es*, *ce*, and *go* are frequently written, and still more frequently pronounced, without the additional syllable," but his instances of plurals are not convincing. We know that *-ed* after *t*, *d*, was often lost in olden time, as we now say *it hurt* for *it hurted*, but the instances cited in Abb. 472, by no means establish its general omission, or indeed its necessary omission in those very cases. Compare, however, Abb. 342.—Final *-ed*, as we see from Gill, was so regularly pronounced, that we should always rather keep than omit it, although Gill allows it to be frequently elided (suprà p. 937, l. 35), and Abb. 474, shews that it was often omitted and pronounced in the same line. "*Est* in superlatives is often pronounced *st* after dentals and liquids. A similar euphonic contraction with respect to *est* in verbs is found in Early English. Thus 'bindest' becomes 'binst,' 'eatest' becomes 'est.' Our 'best' is a contraction for 'bet-est,'" Abb. 473, where he cites, sweet'st, kind'st, stern'st, secret'st, eld'st, dear'st, loyal'st, great'st, near'st, unpleasant'st, strong'st, short'st, common'st, faithful'st, far-rant'st.

TRISSYLLABIC MEASURES.

Unmistakeable trisyllabic measures occur in each of the five places, and occasionally two or even three occur in a single line. The complete lines are quoted and the trisyllabic measures are

italicised. As Mr. Abbott seeks to explain away many of these examples by contractions and softenings, I have added the reference to his book wherever he cites the example. But it will be seen that he has not noticed many of these instances.

First Measure Trissyllabic.

Barren winter with his wrathful nipping cold 2 H⁶ 2, 4, 1 (506', 3), *Abb.* 463.

Having God, her conscience, and these bars against me R³ 1, 2, 88 (560, 235), *Abb.* 466

The following instances are not so well marked as the preceding, and many readers would account for them by an elision; but, the commonness of trissyllabic measures being now established, there seems to be no ground for such a violent remedy. Such trissyllabic measures as the following are frequent enough in modern poetry, where the lightness of the first syllable in the measure (depending on the strong accent on the last syllable of the preceding measure,) would make the use of the three syllables as a measure and a half, appear weak or antiquated. But Shakspeare has no such scruples.

ALEXANDRINE VERSES.

Shakspere seems never to hesitate to use a pure Alexandrine or six-measure line when it suits his convenience. Such lines also occasionally contain trissyllabic measures. Some of these Alexandrines are well marked, in others the last word has such a strong accent on the last syllable but two that both final syllables fall on the ear rather as an addition to the last measure, a mere superfluous syllable, than a distinct measure by themselves. See *suprà* p. 649, l. 1. These two cases will be separately classed.

Mr. Abbott is always very unwilling to admit Alexandrines. He says: "A proper Alexandrine with six accents, such as 'And now | by winds | and waves | my lifeless limbs | are tossed'—*DRYDEN*, is seldom found in Shakespeare," *Abb.* 493, but he admits also that lines with *five* accents are rare, *suprà* p. 929, n. 1. As he intentionally confuses the number of accents (or syllables bearing a stress) with the number of measures, he and I naturally view verses from different points. The true Alexandrine has a pause at the end of the third measure. It consists therefore of two parts of three measures each. This is very marked in the heroic French Alexandrine, where there must be a natural pause in the sense as well as at the end of a word. Now such Alexandrines Mr. Abbott

calls "Trimeter couplets—of two verses of three accents each," *Abb.* 500, an entirely new conception, whereby normal Alexandrines are made to be no Alexandrines at all. The rule of terminating the third measure with a word is, however, not so strictly followed by English as by French and German writers. Every one admits that the final line in the Spenserian stanza is an Alexandrine, or at least has six measures. Now in the 55 stanzas of the Faery Queen, Book 1, Canto 1, I find 44 perfect Alexandrines (Mr. Abbott's Trimeter Couplets), 9 in which the third measure does not end with a word, and 2 (stanzas 30 and 42) in which, although the third measure ends with a word, the sense allows of no pause. This is quite enough to establish the rule for Shakspeare's contemporaries, to shew that Mr. Abbott's Trimeter Couplets must be considered as regular Alexandrines, and to admit of the non-termination of a word with the third measure, which is inadmissible in French. Mr. Abbott begins by noting Alexandrines which are only so in appearance, "the last foot containing two extra syllables, one of which is *slurred*," (a term phonetically unintelligible to me) *Abb.* 494. These are those previously mentioned, and instanced below. But Mr. Abbott allows these two superfluous syllables to be inserted "at the end of the third or fourth foot," *Abb.* 495, without having any value in the verse. Thus, "The flúx | of cómpany. | Anón | a cáre|less héd," AY 2, 1, 6 (210', 52), is made to have only five "feet," i.e. measures, as is also "To cáll | for récompense: | ap-péar| it tó | your mínd," TC 3, 3, 1 (637', 3), and so on. This may do for "scanners," but will not do for listeners. These lines have distinctly six measures, with the true pause. "In other cases the appearance of an Alexandrine arises from the non-observance of contractions," *Abb.* 496. These "contractions" would have a remarkably harsh effect in the instances cited, even if they were possible. No person accustomed to write verses could well endure lines thus divided: "I dáre| abíde| no lónger (454).| *Whither* (466) should| I flý," M 4, 2, 34 (803', 73). The line belongs to two speeches, and *should* may be emphatic. "She lé|vell'd at | our *púr|pose(s)* (471), ánd, | béing (470) roýal," AC 5, 2, 123 (943, 339). Here there are two trissyllabic measures, and no Alexandrine. "All mór|tal cónse|quence(s) (471) háve | pronóunced | me thús," M 5, 3, 1 (807, 5). "As mís|ers dó | by béggars (454); | *neither* (466) gáve | to mé," TC 3, 3, 30 (639, 142). Here *to me* are two superfluous syllables. I should be sorry to buy immunity from Alexandrines at the dreadful price of such Procrustean "scansion." *Abb.* 497, adduces a number of lines which he calls "apparent Alexandrines," and says they "*can be explained*," that is, reduced to five measures, "by the omission of unemphatic syllables." The effect is often as harsh as in those just cited. *Abb.* 498, calls a number of Alexandrines "doubtful," because by various contrivances, reading "on" for "upon" and so on, he can reduce them to five measures. But is this a legitimate method of deducing a poet's usage? Another contrivance is to throw the two first or two last syllables into a line by themselves, *Abb.* 499. Finally we

have the "Trimeter Couplet" (500, 501), "the comic trimeter" (502), and "apparent trimeter couplets" (503), of which enough has been said. In order that the reader may see Mr. Abbott's method of avoiding the acknowledgment of Alexandrines in Shakspeare, reference is made to all the passages in which he cites the following examples with that intention.

Shaksperean "Resolutions," Dissyllables corresponding to Modern Monosyllables.

The following instances of the resolution of one syllable into two, (as they seem to modern readers, who in fact have run two syllables together,) are so marked that it is impossible not to recognize that they were cases of actual accepted and familiar dissyllabic pronunciation. They occur in the most solemn and energetic speeches, where the resolution at present would have a weak and traily effect, such as no modern, even in direct imitation of an old model, would venture to write. We must therefore conclude that all the cases were habitually dissyllabic, and that those numerous cases, where they appear to be monosyllabic as at present, must be explained as instances of trissyllabic measures, Alexandrines, or lines with two superfluous syllables.

Mr. Abbott, however, by his heading "lengthening of words," *Abb.* 477, seems to consider the modern usage to be the normal condition, and the resolution to be the licence. Historically this view is incorrect, and the practise of orthoepists, though subject to the objection that "they are too apt to set down, not what is, but what [they imagine] ought to be," *Abb.* 479,—is all the other way. See Gill on Synæresis, *suprà* p. 937. *Abb.* 481, observes that "monosyllables which are emphatic either (1) from their meaning, as in the case of exclamations, or (2) from their use in antithetical sentences, or (3) which contain diphthongs, or (4) vowels preceding *r*, often take the place of a foot." The examples *Abb.* 481-486, are worth studying, but except in the case of *r*, they appear to be explicable rather by pauses, four-measure lines, accidentally or purposely defective lines, and such like, than by making *go-od*, *bo-ot*, *go-ad*, *fri-ends*, etc., of two syllables, or *daughte-r*, *siste-r*, *murde-r*, *horro-rs*, *ple-asure*, etc., of three syllables, which would be quite opposed to anything we know of early pronunciation. I have, however, referred to all Mr. Abbott's observations on the following citations.

where he cites: You have done our
ple-asures much grace, fair ladies
Tim 1, 2, 37 (745', 151). Although
he corroborates this division by some
passages of Beaumont and Fletcher,
cited from (S.?) Walker, without com-
plete reference, it must surely be a mis-
take. In the passages from Beaumont

and Fletcher *pleasures* is the last word
of the line, which may in each case
have had only four measures with
one superfluous syllable. The word
pleasure occurs very frequently in
Shakspere, and, apparently, always
as a dissyllable, except in this one
passage. This leads us to suppose
the line to have only four measures,
thus: You have done | our plea-
-sures much grace | fair la-|dies,
just as the next line but three: You
have ad-|ded worth | unto't | and
lus-|tre; which again is closely fol-
lowed by a line of three measures:
I am | to thank | you for't |, shewing
the, probably designedly, irregular
character of the whole complimen-
tary speech.

Observe that the rhyme is here an identical one, on the final syllable *-on*, as in the two preceding cases, and that it is *not* a double rhyme (pash-un, fash-un) like the modern (pash-en, fash-en), as this would make each line defective by a measure. The following examples shew that *pas-si-on*, *fash-i-on*, were really trissyllables. The apparent double rhyme *passion*, *fashion*, which occurs three times, is really an assonance of (-as-, -ash-), and will be so treated under assonances, see S with SH and Z, below. It is necessary to be careful on this point, because readers not aware of the trissyllabic nature of *passion*, *fashion*, or the use of assonances in

Shakspeare, might by such rhymes be led to imagine the change of *-sion* into (*-shun*), of which the only trace in Shakspeare's time, is in the anonymous grammar cited, *suprà* p. 916.

These numerous examples of unmistakable resolutions, trissyllabic measures, and Alexandrines, will shew us that we must consider the following, which are only an extremely small sample out of an extremely large number, as trissyllabic measures, and Alexandrine verses, or lines with two superfluous syllables, arising from real, though frequently disregarded, resolutions.

SHAKSPERE'S RHYMES.

After the preceding examination of Spenser's rhymes, pp. 862–871, we cannot expect to find any very great regularity in a poet of nearly the same date, who was doubtless familiar with Spenser's Faery Queen. Shakspeare, however, did not allow himself quite so many liberties as Spenser, although his rhymes would be in themselves quite inadequate to determine his pronunciation. His poems are not in this respect more regular than the occasional couplets introduced into his plays. But the introduced songs are the least regular. He seems to have been quite contented at times with a rude approximation. Consonantal rhymes (where the final consonants are the same, but the preceding vowels are different,) are not uncommon. Assonances (where the vowels are the same, but final consonants different,) are liberally sprinkled. The combination of the two renders it quite impossible, from solitary or even occasional examples, to determine the real pronunciation of either vowel or consonant. It is therefore satisfactory to discover that, viewed as a whole, the system of rhymes is confirmatory of the conclusions drawn from a consideration of external authorities only in Chapter III, and to arrive at this result, the labour of such a lengthened investigation has not been thrown away. As it would be impossible for the reader to accept this statement, merely from my own impressions, I have thought it right to give a somewhat detailed list of the rhymes themselves, and I am not conscious of having neglected to note any of theoretical interest. The observations on individual rhymes or classes of rhymes will be most conveniently inserted in the lists themselves. As a rule, only the rhyming words themselves are given, and not the complete verse, but the full references appended will enable the reader to check my conclusions without difficulty.

Have *rhymes with* cave AY 5, 4, 50 (228', 201); slave AY 3, 2, 34 (216', 161); VA 101 (1004); RL 1000 (1023'); grave R² 2, 1, 20 (363, 137); RJ 2, 3, 15 (722, 83); S 81, 5 (1041); Cy 4, 2, 104 (966, 280); VA 374 (1006'), 757 (1010); gave RL 1511 (1028); crave PP 10, 7 (1054, 137). Kate ha't TS 5, 1, 87 (253, 180), *supra* p. 64, n. 2. In all these cases of *have* and its rhymes we have long (aa).
Haste *rhymes with* fast CE 4, 2, 16 (103, 29); MN 3, 2, 93 (173, 378);

See the remarks on these words *supra* p. 949, col. 2, in proof that they should be considered assonances, and not rhymes. This assonance was almost a necessity, and may have been common. In Walker's *Rhyming Dictionary*, the only words in *-assion* are *passion* and its compounds, and the only word in *-ashion* is *fashion*.

rose clothes H 4, 5, 19, *song* (836, 52).
leap swept MW 5, 5, 13 (65, 47). Perhaps pronounced *sweep*, which is even yet not unfrequent among servant girls. The rhyme occurs in ludicrous verses.
downs hounds VA 677 (1009'). This is in serious verse. Compare *sound* from *son*, *swound* and *swoon*, and the vulgarisms *drown-d gown-d*.
time climb RL 774 (1021'); him limb R² 3, 2, 24 (370, 186). Both of these were probably correct rhymes, final *mb* being = (m).

KJ 4, 2, 52 (349, 268); RJ 2, 3, 18 (722, 93); VA 55 (1003'); fast blast RL 1332 (1026). Taste *rhymes with* last VA 445 (1007); S 90, 9 (1042); LC 167 (1051'); fast VA 527 (1008). The length of the vowel in all these cases is uncertain. Gill has (naast-ed, naast-nd, nast-i, last). The modern development has been so diverse, however, (*heest*, *teest*, *laast* last *laest*. *faast* fast *fæst*, *blaast* blast *blaest*) that a difference of length is presumable.

The insertion of the (u) sound be-
tween (a) and (n), seems to have
exerted no influence on these rhymes.

troducing (u) after (a), or in chang-
ing (al) to (aal), does not seem to
have been regarded in rhyming.

spelling was *gate*; see suprà p. 73, n.
Waist *rhymes with* fast LL 4, 3, 41

these two cases the old spelling was
wast, suprà p. 73, note.

Again *rhymes with* vein main LL 5, 2,

(169', 841); mane VA 271 (1005').
[*maine* in quartos, see suprà p. 73];
alain VA 473 (1007). We must
remember that *again* had two spell-
ings, with *ai*, and *e*, from very early
times, and has still two sounds
(*ee*, *e*).

Said *rhymes with* read LL 4, 3, 50
(148', 193); maid MN 2, 2, 13 (167,
72); H^a 4, 7, 6 (489, 37). The
word *said* was spelled with *ai* and *e*
from very early times, suprà pp. 447,
484. It has still two sounds with
(*ee*, *e*). Gill especially objects to call-
ing *said*, *maid* (sed meed), though
he acknowledges that such sounds
were actually in use.

Bait *rhymes with* conceit PP 4, 9
(1053, 51); state CE 2, 1, 36 (96,
94). It is impossible that both of
these rhymes should be perfect. The
pronunciation of *conceit*, *state* was
then (conseet, staat). It is there-
fore possible that Shakspeare may
have pronounced (bait), as Gill did,
and left both rhymes false.

Wait *rhymes with* conceit LL 5, 2, 192
(155', 399); gate P 1, 1, 11 (978,
79). We have just the same phe-
nomenon here, as in the last case.
Smith and Gill both give (wait), the
other words were (konseet, gaat).

repeat deceit P 1, 4, 15 (981, 74). In
these words Gill writes (-*seev*, -*seet*)
throughout; the pronunciation had
therefore definitely changed, and the
rhymes are all perfect.

Leisure *rhymes with* measure MM 5,
1, 135 (91, 415); treasure TS 4, 2,
23 (246', 59); pleasure S 58, 2

[These rhymes were "allowable,"

perhaps, in the same sense as poets in

the xviiith and xviiith centuries al-

lowed themselves to use, as rhymes,

words which used to rhyme in preceding

centuries. If I have not been greatly

mistaken, the following words would

have rhymed to Palsgrave and Bullockar,

perhaps even to Mulcaster, though it is

not likely that any actor of Shakspeare's

company would have pronounced them

so as to rhyme. We find Tennyson

allowing himself precisely similar

rhymes to this day, *suprà* p. 860, c. 1,

and, as there shewn, the singularity of

the present pronunciation (*wind*), leads

poets to consider it to be (*waind*), as

many always pronounce it when reading poetry. The existence of such rhymes, which could not be accounted for by any defect of ear, gives a strong presumption therefore in favour of the old sound of long *i* as (ii) or (ii), and not as (ai).]

Final unaccented Y with long I.

[These rhymes, which are fully accepted by Gill, who generally pronounced both as (ai), are very frequent in Shakspeare as well as in Spenser, *suprà* p. 869. But final unaccented *y* also rhymes with long *ee* or as (ii), and hence we gather that the original (-e, -ii, -ii-e), out of which these were composed, were still in a transition state. Though they have now become regularly (-i), yet, as we have seen by numerous examples from Moore and Tennyson, *suprà* p. 861, the old licence prevails, although the rhyme (-i, -ii) is now more common than (-i, -ai), thus reversing the custom of the xvith century.]

Long O with open OW=(ou).

[These rhymes shew that the after-
sound of (u) had become faint, justifying
its entire omission by the orthoepists of
the xviiith century. It is curious, how-
ever, to find that in the xixth century
the (u) has reappeared, not merely
where there was formerly (ou), but
also where there was only (oo). It has
no connection with either of the above
sounds, having been merely evolved
from (oo), which replaced both of them
in the xviiith century. The changes
of (ee, oo) into (ei, ou) are local, be-
longing only to the Southern or Lon-
don pronunciation of English, although
widely spread in America, and ortho-
epists are not agreed as to their recep-
tion; the further evolution into (ei, ou),
or nearly (ei, eu), is generally con-
demned. But orthoepists have a habit
of condemning in one century the rising
practice of the next.]

Long U, UE, EW, IEW, and YOU.

[The following examples shew, that whatever was the pronunciation, Shakspeare found these rhymes sufficiently good for his purposes. According to Gull, he must have rhymed (yy, eu, juu). The modern pronunciations are (iu, uu, juu) in various words, and are generally held to rhyme. But the rhymes in Shakspeare can no more justify us in supposing that he pronounced them identically, than the universal custom of German poets in rhyming *ö, ü, eu* with *e, i, ei*, would admit of us supposing that they would endure the former vowels, received as (*œ œ, yy y, ay oy oi*), to be reduced to the second, which are received as (*ee e, ii i, ai*). This is a most instructive example, because this custom of rhyming is universal among German poets. The corresponding pronunciation is extremely common, and it is as much shunned by all who have any pretence to orthoepical knowledge, as the omission or insertion of the aspirate in English speech. We may, therefore, well understand Shakspeare using rhymes and making puns due to a perhaps widely spread pronunciation, while he would, as manager, have well "wigg'd" an actor who ventured to employ them on the stage in serious speech,—a fate impending on any German actor who should "assist" his author's rhymes by venturing to utter *ö* as (*ee*), *ü* as (*ii*), or *eu* as (*ai*).]

MR. RICHARD GRANT WHITE'S ELIZABETHAN PRONUNCIATION.

The following is an abstract of Mr. White's *Memorandums on English Pronunciation in the Elizabethan Era*, which forms an appendix to the 12th Vol. of his *Shakespeare*, suprà p. 918, n. 1. Passages in inverted commas are nearly in the words of the original; those in brackets, and all palaeotypic symbols, are additions.

A.

A was generally (ee) as in *ale, make, tame*; sometimes (AA) as in *awe, saw, full*; the Italian (aa) and short (æ) are rarely indicated.

A final was almost always (ee.) This is shewn by the rhymes: say Seneca, Drayton's *Élegies*, 1627, p. 197; Remora delay, *Pastor Fido*, 1647, p. 215; from height of Idey = Ida, Seneca's *Ten Tragedies*, 1581, fol. 115. [See suprà p. 912, under AI. In a note on MV 3, 1, 23 (192. 81), Mr. White observes that both folios and quartos spell *Genowa* or *Genoway*, and thinks this indicates the pronunciation *Geno'a* or *Geno'ay*, a position of the accent now common among the illiterate. But if we remember that the Italian is *Genova*, we may suppose *Gen-o-wa* to have been intended, or apply the suggestion, suprà p. 133, note. According to the Cambridge editors, the quartos and first three folios have *Genowa*, and the fourth *Geneva*, a mistake for *Genova*. None end the word with *ay*. He adds:] "I am convinced that the final *a* of proper names had then almost always the pure sound of the vowel; and the more, because such a pronunciation still pervades New England, where even the best-educated men, who have not had the advantage of early and frequent intercourse with the most polite society of Boston and the other principal cities, say, for instance, Carolinay for Carolina, Augustay for Augusta, and even Savannay for Savannah—the last syllable being rather lightly touched, but being still unmistakeably *ay* (ee) instead of *ah* (aa). If told of this, they would probably be surprised, and perhaps deny it; but it is true; and the pronunciation, although somewhat homely, is merely a

remnant of Shakespearian English." [Say rather of English of the xviith century, and that peculiar, if we may trust orthoepists at all. Compare the observations on German *e* final, suprà p. 119, note, col. 2.]

In *angel, stranger, danger, manger*, *a* = (æ) or (A), shewn by the co-existence of the spellings *an, aun* [no instance of *aungel* is cited].

In *master, plaster, father*, *a* = (ee). In *Pastor Fido*, v. 6, p. 202, ed. 1647, we find the rhyme: father either. Also in *have*, *a* = (ee). "He [the painter West] also pronounced some of his words, in reading, with a puritanical barbarism, such as *haive* for *have*." Leigh Hunt's Autobiography, p. 85, ed. 1860. "My mother, who both read and spoke remarkably well, would say *haive* and *shaul* (for *shall*) when she sang her hymns." *Ibid.* [Both xviith century sounds, (neev) being the late form of (hææv). The modern (hæv) shortened the vowel, without altering its quality. We have (feedh·r) now as a provincialism, see suprà p. 750, n. 8.]

CH

had more frequently than now the sound *k*. [The instances cited—*beseke, belk, stinch, roches*, for *beseech, belch, stink, rocks*,—are only cases of old *k* not changed into (tsh). The *ch* can hardly be supposed to represent *k*; yet Mr. White observes that *chaste* is *cast* in the first and second folios of WT 3, 2, 19 (315, 133), which might have been a misprint, and suggests that we should read, "he hath bought a pair of *chaste* lips of Diana, for "cast lips," in AY 3, 4, 10 (219', 16), which would spoil the joke of comparing Dian's lips to cast-off clothes. It cannot be supposed that there was any

variation between (tsh) and (k) in this and similar words. In LL 5, 1, 10 (150', 35'), he supposes *chirrah* to represent *shirrah*.]

E.

The *-ed* was "rigorously pronounced," unless the contraction was indicated. Thus *purpled*, *shuffled*, were *purp-l-ed*, *shuff-l-ed*. [See *suprà* p. 952.]

EA.

Generally *ea* = *ee*. [Here Mr. White recants a hasty opinion that *ea* = (ii), made in a note on LL 4, 1, 60 (145', 148'), on finding that Mr. Collier's folio supplied *declare* as a rhyme to *swear* in that passage, thus :

To see him kiss his hand! and how
most sweetly 'a will swear,
*Looking babies in her eyes, his passion
to declare.*]

But in *thread*, instead, *ea* was (ii), as inferred from the very frequent misspellings *threed*, *threde*, *insteede*, *instede*. [The inference is unsafe, because the spelling *ea* was not well fixed, see *suprà* p. 77.] In *heart*, *heard*, *earth*, *dearth*, *hearth*, *ea* appears to have had "the broad sound of *a*." [this "broad sound" should mean (AA), but (aa) is probably intended, as he spells] *hart*, *hard*, *arth*, etc. "The first and last are still preserved, and the others linger among the uncultivated. But *heard* and *earth* were conformed to analogy by some speakers and writers, and pronounced *haird* and *airth*; and this usage is not yet extinct in New England. *Beard* appears to have had four sounds, *beerd* (rarely), *baird* (the most usual), *bard* and *burd*—the sound of the same letters in *heard* at this day." In *creature*, *e-a* were two sounds [*suprà* p. 947]. See the rhyme: began ocean, Milton's *Hymn on the Nativity*, st. 5, and : ocean run; Browne's *Pastorals*, 1, 25, ed. 1772. [See: ocean motion, *suprà* p. 954, col. 1, and: physician incision, *suprà* p. 949, col. 2.] *Ëa* was short (e) in *leap'd*, *heap't*.

EAU.

[In a note on H⁴ 1, 2, 7 (383', 28'), Mr. White conceives that "squires of the night's body" and "thieves of the day's beauty," contained a pun on *body*, *beauty*, by giving the latter its modern French sound *beauté*. But *eau* in the English pronunciation of that time was not the French, as we have seen, *suprà*

p. 138, and the French sound of that time was not the modern one, *suprà* p. 822 and p. 922.]

EI

was probably always (*ee*).

EW

was often (*oo*), as it is now in *shew*, *strew*, as shewn by rhymes, and spelling *shrow* = shrew, *Albion's England*, 1602, p. 41; *tew* = tow, *Ib.* p. 144; *shewres* = showers, *Ib.* p. 193, [*suprà* p. 960, col. 2, under the rhymes to *So*.] But *ew* was also (*uu*), "and even *shew*, the preterite, had that pronunciation, which it still preserves in New England." In *sue*, *rue*, *true*, *Louis*, *ew* was "very commonly used" for (*uu*).

GH

was more frequently *f* than at present. Compare the rhymes: daughter after, *Pastor Fido*, 1647, p. 150, *Romeus and Juliet*, ed. Collier, p. 65; taught soft, Browne's *Pastorals*, 1, 68; and the spelling: *raughter* = rafter, Lilly's *Galathea*, act 1, sc. 4. But *gh* was also silent. The following rhymes are cited from Collier, Coleridge, and Shakespeare, 1860: oft naught, *Passionate Pilgrim*; taught aloft, Surrey's *Forsaken Lover*; shaft caught, Chapman's *Hero and Leander*; aloft thought, Chapman's *Hesiod*; after manslaughter, Barclay's *Eclogue II*. [See Shakspere's rhymes, *suprà* p. 963, col. 2.]

H.

Probably more often dropped than at present.

I

had the sound (ii) in monosyllables and many other places, as shewn by the misspellings in the folio 1623: the world to *weet* (= wit) AC 1, 1, 11 (911', 39); *spleets* (= splits) what it speaks AC 2, 7, 67 (924, 129); the *breeze* (= brize) upon her AC 3, 10, 6 (928', 14); a kind of *wecke* (= wick) or snuffo H 4, 7, 29 (839, 116), quarto 1604; At whose abuse our *flying* (=fleering) world can winke, Churchyard's *Charity*, 1595; Doth neither church, *queer* (=quire, choir), court, nor country spare, *Ibid*; In David's Psalms true *miter* (= metre) flows, Churchyard's *Praise of Poetry*, 1595. The spelling *spreet* for *spirit*, *sprite*, or *spright*, is very common. "Which the *High* goat (= he-goat) as one

seeing, yet reserving revenge, etc.." Braithwaite's *Survey of History*, 1638, p. 342. [See *Wheson*, *suprà* p. 930.]

IE

was generally (ii), but *pierce*, *ferce*, were "very generally pronounced *purse* and *furas*" [meaning (pɜs, fɜs), or (pɛɜs, fɛɜs), but the xvth century sounds were professedly, (pɛɜs, fɛɜs)].

L

was more often silent than now, as shewn by the spellings *fautes* = faults, *haully* = haughty, *Ralph*, *Rafe* = Ralph; but was heard in *could*, *should*, *would*, down to past the middle of xvth century. [In a note on LL 5, 1, 5 (150, 22), Mr. White mentions that *i* in *could*, *would*, is heard in the old pronunciation of the eastern United States, see *suprà* p. 871, col. 2, and p. 961, col. 2, under OO.] The spelling *jelious* (*Albion's England*, c. 84, p. 349, ed. 1606) may indicate the sound still retained in *rebellious*, *stallion*.

O, OA.

There was great irregularity in the spelling. "Some well-educated old-country folk (Mrs. Kemble for instance) pronounce *toad* with a broad dissyllabic utterance of both vowels, the first long, the second short—tō-ăd. The same pronunciation obtains in a less degree with regard to *throat*, *road*, *load*, and other like words." But Shakspeare used "the simple sound of o" [meaning perhaps (oo), but see *suprà* p. 94]. *One* was the same as *own*. The modern prefixed *w* is like the Dorsetshire *whot*, *wold*, *whome*, *dwont*, *pwint*, *cwot* = hot, old, home, don't, point, coat.

OI

was simple *i* in *join*, *point*, *boil*, etc., down to Pope's time, *suprà* p. 134.

OO.

Early in the Elizabethan era *oo* expressed "those sounds of *u*—as in *cud* and *blood*, *intrude* and *brood*—for which it now stands," that is (ə, uŋ?). The use of *o-e*, was meant perhaps to indicate the old sound (oo). "Although we often find *room* spelled *rome*, we never find *Rome* spelled *Room*, or either word *rum*e or *rum*." The sound (Ruum) was one "of the many affectations" of the xviii th century. *Moon*, frequently spelled *mone*, rhymes with

Birone LL 4, 3, 70 (148', 230), and probably had the long *o* sound. [In a note on the passage, he repudiates the notion that *Birone* should be read (Birūn'), apparently because the name here rhymes with *moon*, or because Mr. O. J. Fox said *Toulcon* in the House of Commons; but see *suprà* p. 961. In a note on MN 5, 1, 28 (177', 139), the rhyme: know woo, makes him suppose that *woo* and *woe* had the same sound. But see rhymes to *woo*, *suprà* p. 961, and *Salisbury*, p. 785. And on KJ 5, 7, 1 (354', 2), reading '*poor* brain,' instead of '*pure* brain,' he observes: "The original has *pore*, the commonest spelling of '*poor*' in the folio, and in other books of the time, representing the old pronunciation of that word, which is still preserved in some parts of the United States." The Cambridge editors say that in all the copies known to them the reading is *pure*, and not *pore*.]

OU

had either the sound (ou) or (uŋ).

QU

was (k) in **banquet*, *quality*, *quantity*, **quay*, *quern*, *quintain*, **quoif*, *quod*, **quoit*, **quote*, and perhaps *quart*, and *quit*. [Those words marked * are still frequently so pronounced.] LL 5, 2, 142 (154, 279), perhaps contained the pun *qualm*, *calm*; as also 2 H⁴ 2, 4, 11 (419, 40), where the Hostess has *calm*, meaning *qualm*, and Falstaff takes the word as *calm*. [Price, 1668, gives "*qualm* sudden fit, *calm* still quiet," among his list of differences between words of like sound.]

S

"before a vowel had often the sound of *sh*, as it has now in *sugar* and *sure*. Such was its sound in *sue*, *suit*, and its compounds, and I believe in *super* and its compounds, and in *supine* and *supreme*. *Sewer* was pronounced *shore* in the Elizabethan era. Hence, too, *shekels* was spelled *sickels*" in the fo. MM 2, 2, 64 (74', 149). [The Cambridge editors quote from *Notes and Queries*, vol. 5, p. 325, the observation that *shekels* is spelled *sickles* in Wycliffe's Bible. This is not an instance of *s* and *sh* interchanging in sound, but of different transcriptions of a Hebrew word (shek'el) which Jerome Latinized into *siclus*, of course the im-

mediate origin of Wycliffe's spelling, and hence probably of the folio reading. Referring to LL 4, 1, 37 (144', 109), see *supra* p. 215, note, he says that in LL 3, 1, 77 (143, 191), *sue* is printed *shue*. It is not so in the fo. 1623, and the Cambridge editors do not note the form.]

TH

probably more frequently had the sound of (t) than at present. Compare the common spellings: *nostrils* nosethrills, *apotecary* ap^ohecary, *authority* authority, *t'one* the one, *t'other* the other [*t'one*, *t'other*, are thought to have been *that one*, *that other* = *'t one* *'t other*], *trill* thrill, *swarty* swarthy, *fift* fifth, *sixt* sixth, *eight* eighth [the last three are quite modern spellings and sounds], *Sathan* Satan, *stalworth* stalwart, *quot*, *quote*, *quod*, *quoth*. Less usual examples: *whats* *tys this*, twice in *Wyt and Science*, Shak. Soc. ed. p. 21 [compare the change of *ð* to *t* after *d*, *t* in Orrmin, *supra* p. 490, l. 22, and p. 444, n. 2, but here *tys* may be simply a misprint]; a pytheus *piteous* crye, *Robert the Devyll*, p. 6; in golden throne *throne*, Seneca's *Ten Tragedies*, 1581, p. 124 [compare Salesbury, *supra* p. 760, n. 3]; *th' one* autenticque *authentie*, Daniel's *Rosamond*, 1599, sig. Cc 2; *dept* *depth* of art, Browne's *Pastorals*, 2, 52; Be as cauterizing *cauterizing*, Tim 5, 1, 48 (761', 136), ed. 1623 [it is really misprinted as a *Cantherizing* in that folio, the other three folios read as a *catherizing*, *cauterizing* was Pope's conjecture, other editors read *cancerizing*, the instance is therefore worthless]; the Thuskan *Tuscan* poet, Drayton's *Nymphidia*, 1627, p. 120; with amatists *anethysts*, *Arcadia*, 1605, p. 143; call you this gamouth *gamut*, four times, TS 3, 1, 24 (240', 71), ed. 1623 [the other folios have *gamoth*, the derivation is obscure]. Observe the interchange of *t*, *th*, in Japhet, Batseba, Hithite, Galathians, Loth, Pathmos, Swethen, Goteham, Gotes, Athalanta, Protheus, Antony, Anthenor, "throughout our early literature." See also in Sir Balthazar Gerbier's *Interpreter of the Academie for Forrain Languages and all Noble Sciences and Exercises*, 1648, 4to., where the writer, a Fleming, whose "associations were with the highest-bred English people of his day, . . . intended to ex-

press with great particularity the English pronunciation of the day, and it specially became him to give the best." Thus he spells *leftenant*, *Nassow*. "In this singular book, which is printed with remarkable accuracy, we find words spelled with *th* in which we know there was only the sound of *t*, and, what is of equal importance, words written with *t* which were then, as now, according to received usage, spelled with *th*, and which have been hitherto supposed to have been pronounced with the *θ* (th) sound." The examples are *With Sundayes* = Whit Sundays, may *seth* = set, will *theach* = teach, *strenckt* = strength, *yought* = youth, *anathomie* = anatomy, *fourthy* = forty, *seventhy* = seventy, *seuentheen* = seventeen, *dept* = depth, *hight* = height, *sigth*, *sighed* = sight, sighted, *rethorike* = rhetoric, *braught* = broth, the French is *potage*.

To this refer the puns "that most capricious [punning on *caper* = a goat] poet Ovid among the *Goths*," AY 3, 3, 3 (218', 9); and "Note, notes, forsooth, and *nothing*," MA 2, 3, 16 (118', 59). Compare "no hearing, no feeling, but my sir's *song*, and admiring the *nothing* of it," WT 4, 4, 164 (324', 625). Let the reader "discover if he can what this means, if *nothing* was not pronounced *noting*. Let him explain too, if he can, the following passage (which no one has hitherto attempted to explain), '*Armado*.—But to have a love of that colour, methinks Samson had small reason for it. He surely affected her for her wit. *Moth*.—It was so, sir, for she had a green wit,' LL 1, 2, 51 (138', 91), except on the theory that the *th* was pronounced as *t*, and that the Page puns, and alludes to the green withes which Dalilah vainly used as bonds for Samson. And here compare Gerbier's [here misspelled *Bergier's* in the original work] spelling *With-Sundayes*, and conversely the frequent spelling of the preposition 'with' *wit* in writings of an earlier date." Notice *d* for *th*, and conversely, in *murder*, *further*, *fathom*, *hundred*, *tether*, *quoth*. "I believe that in the Elizabethan era, and, measurably, down to the middle of the seventeenth century, *d*, *th*, and *t*, were indiscriminately used to express a hardened and perhaps not uniform modification of the Anglo-Saxon *ð*, a sound like which we now hear in the French pronunciation of

meurtre, and which has survived, with other pronunciations of the same period, in the Irish pronunciations of *murder*, *further*, *after*, *scater*, in all of which the sound is neither *d*, *th*, nor *t*." [He alludes to the very dental *t*, *d* = (t, d) common on the Continent, still heard in some combinations in Lancashire, Yorkshire, Westmoreland, and the Peak of Derbyshire, and probably much more widely; the Irish seems to be complicated with a post-aspiration (tʰ, dʰ). In Yorkshire *water* is sometimes (waa'tʰer) and almost (waa'tʰer), and Southerners, in trying to imitate it, call it (waa'tʰi). In the following notes, Mr. White pursues this subject further.] LL 1, 2, enter Moth (137). "I have not the least doubt that the name of *Armado's* Page is not *Moth*, but *Mote*—a 'congruent epitheton' [LL 1, 2, 9 (138, 14)] to one whose extremely diminutive person is frequently alluded to in the play by phrases which seem applicable only to Tom Thumb. That 'mote' was spelled *moth* we have evidence twice in one line of this play [LL 4, 3, 39 (148, 161)], which stands in the original [in the quartos and folios]: 'You found his *Moth*, the King your *Moth* did see;' also in the following from KJ 4, 1, 29 (346, 92): 'O heaven, that there were but a *moth* in yours;' and, in fact, in every case in which the word appears in the first folio, as well as in all the quartos. Wicliff wrote in Matthew vi.: 'were rust and mought distryeth' [in Forshall and Madden's ed., Matt. vi. 19, older version, "wher rust and mouȝthe distryeth," later version, "where ruste and mouȝte destrieth," where we have the very same diversity of *th* and *t*]. Indeed, it seems far from improbable that the two words were originally one, and that 'mote' is not, as Richardson supposes, from 'mite.' For both 'mite' and 'mot[e]' are found in Anglo-Saxon, in which language 'moth' is *moghte* [mogðe, mohðe, or moððe, according to Ettmüller, p. 232, who refers the word to the root *mûgan*, *mûhan*, to be able, to cover, to heap up; this accounts for the *z* so often found in old writings, and the two sounds (moot, mooth) are similar to the two sounds (draat, dræuth), see *supra* p. 963; *mite*, ags. *mîte*, from *mitan*, to eat; *mote*, ags. *mot*, is of very uncertain origin]. But whether the name is *Moth* or *Mote*, it is plain

that the pronunciation was *mote*." In a note on the fairy's name, Moth, MN 3, 1, 49 (169, 165), Mr. White notes that the Moth of the old editions means *mote*, and quotes from Withal's *Shorte Dictionarie for Young Beginners*. London, 4to., 1568. "A moth or motte that eateth clothes, *tinea*. A barell or great bolle, *Tina*, *uz*. *Sed tinea, cum c, vermiculus est, anglice, A mought;*" and from Lodge's *Wits Miserie, or the World's Madnesse*, "They are in the aire like *atons* in *sole*, mothes in the sun." On TS 2, 1, 16 (237, 43), he remarks that 'Katharina,' had the *th* sounded as *t*, as shewn by the abbreviation Kate. [So also Jones, *supra* p. 219.] On *pothor*, KL 3, 2, 9 (862, 50), he remarks: "This word was spelled *powther*, *pothor*, *podther*, and *pudder*. In the first three cases it seems to have been pronounced with the *th* hard; and I believe it to be no more nor less than the word 'potter,' which is used in this, but not, I believe, in the mother country." [But the modern (pædʰr) favours an old (puðʰr), which, with the interchange of (d) and (dh), explains everything.] *Bermoothes*, T 1, 2, 53 (4, 229), is the same as *Bermudas*. In the introduction to MA, vol. 3, p. 227, Mr. White very ingeniously shews that if we read *Nothing* as *Noting*, the title becomes intelligible, "for the much ado is produced entirely by noting. It begins with the noting of the Prince and *Claudio*, first by *Antonio's* man [overheard MA 1, 2, 4 (113, 9)], and then by *Borachio*, who reveals their conference to *John* [heard MA 1, 3, 19 (114, 64)]; it goes on with *Benedick* noting the Prince, *Leonato*, and *Claudio* in the garden [the fowl sits MA 2, 3, 26 (119, 95)]; and again with *Beatrice* noting *Margaret* and *Ursula* in the same place [Beatrice runs to hear MA 3, 1, 3 (120, 25)]; the incident upon which its action turns is the noting of *Borachio's* interview with *Margaret* by the Prince and *Claudio* [see me MA 2, 2, 14 (118, 43); you shall see MA 3, 2, 51 (122, 116); saw MA 3, 3, 57 (123, 160); did see MA 4, 1, 41 (126, 91)]; and finally the incident which unravels the plot is the noting of *Borachio* and *Conrad* by the Watch [act 3, sc. 3]. That this sense, 'to observe,' 'to watch,' was one in which 'note' was commonly used, it is quite needless to shew by reference to the literature and lexicographers of Shake-

spere's day; it is hardly obsolete; and even of the many instances in Shakespeare's works, I will quote only one, 'slink by and note him,' from AY 3, 2, 77 (217, 267)." [Compare also LL 3, 1, 6 (142, 25), "make them men of note—do you note me?" Mr. White then quotes the *assonance*, which he regards as a rhyme: doting nothing S 20, 10 (1033'), see *suprà* p. 955].

[The whole of this ingenious dissertation apparently arose from the passage:—

"*Balthazar*. Note this before my notes;

There's not a note of mine that's worth the noting.

D. Pedro. Why, these are very crotchets that he speaks;

Note, notes, forsooth, and nothing."—MA 2, 3, 15 (118', 57').

This is the reading of the Quarto and Folios, for which Theobald proposed *noting*, a correction which seems indubitable. *Nothing* is given as (noth'iq) with a short vowel, the precursor of our (neth'iq), by both Bullokar and Gill, and although the shortness of the vowel did not stand in the way of Shakspeare's assonance, just quoted, nor would have stood in the way of such distant allusions as those among which it is classed, *suprà* p. 922, yet it is opposed to its confusion with (noot'iq). Still I have heard a Russian call *nothing* (noot'iq), with the identical (oo) in place of (oo) as well as (t) for (th). Acting upon this presumed pun, *noting*, *nothing*, Mr. White inquires whether the title of the play may not have been really "Much ado about *noting*," and seeks to establish this by a wonderfully prosaic summary of instances, all the while forgetting the antithesis of *much* and *nothing*, on which the title is founded, with an allusion to the great confusion occasioned by a slight mistake—of Ursula for Hero—which was a mere nothing in itself. The Germans in translating it, *Viel Lärm um Nichts*, certainly never felt Mr. White's difficulty. It seems more reasonable to conclude that in MA 2, 3, 16 (118', 59), and WT 4, 4, 164 (324', 625), *nothing* was originally a misprint for *noting*, which was followed by subsequent editors. It is the only word which makes sense. In the first instance, it is required as the echo of the preceding words; in the second, Autolycus says: "My clown . . . grew

so in love with the wenches' song that he would not stir his pettitoes till he had both *tune* and *words*; which so drew the rest of the herd to me, that all their other senses stuck in ears; . . . no hearing, no feeling, but my sir's *song*, and admiring the *noting* of it;" where *song* and *noting* correspond to *words* and *tune*; and this serves to explain the joke in MA, where Balthazar, by saying that "there's not a note of his that's worth the noting," having already punned on *note* = observe, and musical sound, puns again on *noting* = observing and putting into music; and in D. Pedro's remark, the only pun is on *crotchets*, i.e., either the musical notes or the puns which Balthazar is uttering. The joke on *noting*, and *nothing*, supposing the jingle to answer, is inappreciable in both cases. But dismissing all reference to *noting* and *nothing* as perfectly untenable, there is no doubt that Mr. White has proved *Moth* in LL to mean *Mote* or *Atomy*, RJ 1, 4, 23 (717, 57), and in all modernized editions the name should be so spelled, as well as in the other passages where *moth* means *mote*. Again, in the passage LL 1, 2, 52 (138', 94), there can be no doubt that *green wit* alludes to Dalilah's green withe. This interpretation is also accepted by the Cambridge editors. But how should *wit* and *withe* be confused? Have we not the key in that false pronunciation of the Latin final *-t* and *-d* as *-th*, that is, either (th) or (dh), which we find reprobated by both Palsgrave and Salesbury (*suprà* p. 844, under D and T, and p. 759, note 4)? There is no reason to suppose that *wit* was even occasionally called (with); we have only to suppose that *Mote*—who is a boy that probably knew Latin, at least in school jokes, witness "I will whip about your Infamie Vnum cita," LL 5, 1, 30 (150', 72) [the Latin in this play is vilely printed, by-the-bye, and this *vnum cita* is sufficiently unintelligible; Theobald reads *circum circa*; another conjecture is *manu cita*; perhaps *intra extra* may have been meant, compare Liv. 1, 26, "*verbera, vel intra pomoerium . . . vel extra pomoerium*," but it was, no doubt, some well-known school urchin's allusion to a method of flogging]—would not scruple, if it suited his purpose, to alter the termination of a word in the Latin school fashion, and make (wit) into (with) or (width) or to merely add

on the sound of (th), thus (withh), as we now do in the word *eighth* = (*etth*). We find him doing the very same thing, when, for the sake of a pun, he alters *wittoll*, as the word is spelled in the fo. MW 2, 2, 83 (61', 313), into *wit-old*, LL 5, 1, 26 (150', 66). But the word *withe*, ags. *wīðig*, with a long vowel, is otherwise remarkable. It is now called (with) by most orthoepists, Perry giving (with) and Smart (wēidh). The long ags. *i* would make us expect (ai), but it is one of the words which has remained unchanged. Even Smart gives (widh*i*), which is the complete word, though Worcester writes (with*i*). These varieties are due to its being a word which orthoepists are probably not in the habit of hearing and using. The Scotch say (wid*i*, wəd*i*). Could *withe* have ever been called (wit)? It is possible, just as *fist*, *sixt*, cited by Mr. White, had (t) in ags. and as late as Gill, but have now (th). That *th*, *t*, were used in a very haphazard way in Latin, Greek, and Hebrew words in the xvth and even xvith century is well known (suprà p. 219), and probably there was great uncertainty of pronunciation in such words, partly through ignorance, and partly perhaps, because, notwithstanding what Bullokar says, suprà p. 842, l. 19, *th* in Latin and Latinized words may have been by a large section of scholars called (t). To this category may be referred the pronunciation of *Goth* as (goot), AY 3, 3, 3 (218', 9), which is certainly intended. The usages of the Fleming Gerbier are not entitled to much weight. He probably could not pronounce (th), and identifying it with his own (tʃ), which was also his pronunciation of (t), became hopelessly confused. In his own Flemish, *th* and *t* had the single sound (tʃ). His *With-Sunday* may be a mere printer's transposition of letters for *Whit-Sunday*. There does not appear to be any reason for concluding that the genuine English *th* ever had the sound of (t), although some final *t*'s have fallen into (th).—As regards the alternate use of *d* and *th* in such words as *murther*, *further*, *father*, etc., there seems reason to suppose that both sounds existed, as they still exist, dialectically, vulgarly, and obsolescently. But we must remember that (b, d, g) between vowels have a great tendency in different languages 'o run into (bh, dh, gh). Thus in German, *aber*,

schreiben, become dialectically (*aa*-bher shrai-bhen). See examples in Pennsylvania German, suprà p. 557. In Danish *d* medial and final is generally (dh), though not distinguished in writing, and similarly *g* in the greater part of Germany becomes (gh, gih) in the same positions. In Hebrew the pairs (b bh, d dh, g gh) had only one letter a piece. Hence (d, dh) forms no analogy for (t, th). The upshot of Mr. White's researches seems, therefore, to be that writers of the xvth and xvith centuries were very loose in using *t*, *th*, in non-Saxon words. That this looseness of writing sometimes affected pronunciation, we know by the familiar example *author* and its derivatives. Thus Mätzner notes, *Eng. Gram.* 1, 132: "In words derived from ancient languages," observe the limitation, "*th* often replaces *t*: *Anthony* (*Antonius*), *author* (*autor*), *prothonotary* (*protonotarius*); we also find *lanthorn* as well as *lantern* (*lanterne*, lat. *laterna*, *lanterna*)." Could this last spelling have arisen from a false etymology, arising from the common employment of transparent horn in old lanterns? The *h* does not appear to have ever been sounded. "Old English often writes *t* in this way: *rethor* (*rhethor*), *Sathanas* (*Satanas*), *Ptholomee*, etc. The modern English *anthem*, old English *antem*, ags. *antifēn*, arose from *antiphona*."]'

U.

"U, when not followed by *e*, had very commonly that sound (very unfitly indicated by *oo*) which it has in *rude*, *crude*, and the compounds of *lude*, and of which the 'furnitoor, literatoor, matoor,' of old-fashioned, though not illiterate, New-England folk is a remnant. Such phonographic spellings as the following, of which I have numerous memorandums, leave no doubt on this point: ugly *ougly*, gun *goon*, run *roon*, clung *cloong*, spun *spoon*, curl *coorle*, and conversely poop *pup*, gloom *glum*, gloomy *glumy*." [In all but the last two instances the sound was (u), and they are corroborations of the statement that short *u* was (u) or (ʊ) in the xvth century. See suprà p. 167. In a note on *Puck*, MN 2, 1, 3 (164', 18), vol. 4, p. 101, Mr. White says that previously to Shakspeare it was always spelled *powke*, *pooke*, or *pouke*; and in vol. 6,

p. 143, in a note on "muddied in Fortune's mood," AW 5, 2, 1 (276, 4), he notices the pun, *mood*, *mud* (see *suprà* p. 926), spoiled by Theobald's correction into *moat*, adopted by Warburton. Probably we have the same pun, or error spelling, 2H⁴ 2, 4, 13 (419, 43), where "muddy rascal" is probably a joke on "moody rascal."]

URE.

"That *ure* final was generally, if not universally, pronounced *er* among even the most polite and literate of our Elizabethan ancestors, no observant reader of the books of their day, or even those of the latter part of the seventeenth century, need be told." [The usage was not general, or con-

firmed till the xviiith century. The transition was (-tyr, -tuur, -tar), compare Mr. White's remarks on U.] Compare the spellings *venter* venture, Milton's *Comus*, v. 228, ed. 1673, also in other books, *nurter* nurture, *futer* future, *tortor* torture, *vultur* vulture; *joynter* jointure TS 2, 1, 127 (239', 372) in fo. 1623; *rounder* roundure KJ 2, 1, 62 (337, 259), in fo. 1623, *wafter* wafture JC 2, 1, 63 (771', 246) in fo. 1623; also *monsture* monster. *Albion's England*, ed. 1602, p. 162. [See *suprà* p. 200, l. 11, and the rhymes: departure shorter, enter venture, *suprà* p. 954. Thomas Gray, 1716-42, in his *Long Story*, rhymes: satire nature, ventured enter'd.]

Mr. White adds: "Some readers may shrink from the conclusions to which the foregoing memorandums lead, because of the strangeness, and, as they will think, the uncouthness, of the pronunciation which they will involve. They will imagine *Hamlet* exclaiming:—

—'A *baste* that wants *discoorse* of *rayson*
Would *haive* *moorn'd* longer!
'O, *me* prophetic *sowl*! *me* *ooncle*!
'A broken voice, and his whole *foonction* shooting
Wit forms to his *consayt*, and all for *noting*!

and, overcome by the astonishing effect of the passages thus spoken, they will refuse to believe that they were ever thus pronounced out of Ireland. But let them suppose that such was the pronunciation of Shakespeare's day, and they must see that our orthoepy would have sounded as strange and laughable to our forefathers, as theirs does to us." Of these pronunciations we have no authority for *haive*, *me*, *shooting*, *wit*, *noting*, as representatives of *have*, *my*, *suiting*, *with*, *nothing*, — (hæv) or (hææv), (mæi) or (mi), (syyt'iq, with, noth'iq), being the only pronunciations which external authorities will justify. The example is, however, quoted, as the first attempt which I have seen to give complete sentences in Shaksperian pronunciation, the un-Italicized words being supposed to have their present sounds.

SUMMARY OF THE CONJECTURED PRONUNCIATION OF SHAKSPERE.

It now remains from these indications to draw up a scheme of Shaksperian pronunciation, sufficiently precise to exhibit specimens in palaeotype. Shakspeare was born in 1564, became joint proprietor of Blackfriars Theatre¹ in 1589, and died in 1616. He was a

¹ This is the usual belief. Mr. Halliwell, in a letter in the *Athenæum* of 13 Aug., 1870, p. 212, col. 3, says that he had recently discovered a series of documents concerning the establishment

of the Globe and Blackfriars theatres, which dissipate a mass of conjecture and throw much light on the history of the Elizabethan stage. "It is now certain," he says, "that Shakspeare,

Warwickshire man, and our chief authority for the pronunciation of the time, Dr. Gill, a Lincolnshire man; but such local and personal peculiarities must be disregarded. What we want to assign is the pronunciation in which his plays were acted, during the last decade of the xvith and the first of the xviith century. This pronunciation may be fairly assumed to be that determined by the preceding quarter of a century, during which the actors must have acquired it, and, judging from stage habits in the xixth century, it will probably have been archaic.

CONSONANTS do not present the slightest difficulty, except in respect to syllabic R (p. 951) and L (p. 952), the guttural or mute GH, and S, T. Although we have much reason to suspect a use of vocal R (= r) similar to that now in vogue (p. 196), especially from the influence of final r on the pronunciation of the preceding letters, as in the rhymes pp. 964-6, yet we have absolutely no authority for such a conclusion. Even Cooper's words (p. 200), which seem to convey the distinctest intimation, are not decisive. Hence no attempt will be made to distinguish R into (r, r), but the modern Scotch (r) will be assumed in all cases. Syllabic R and L will, therefore, be written (er, el). Thus—

Juu sent mi dep'yyti for Eierland H³ 3, 2, 73 (610, 260).

As respects GH, there seems to be no doubt that it was still indicated in speech. The interpretation of Salesbury's words, cited on p. 210, was slightly modified by Dr. Davies in revising p. 779, and it is evident that we must assume the (kh) to have been very lightly touched. All those who are familiar with the various local pronunciations of German, know well that there are extreme differences in the force with which the breath is expelled when pronouncing (kh). Shakspeare certainly did not find his utterance of this sound sufficiently strong to debar him from disregarding it altogether in rhymes (p. 963), which however does not shew that it was not pronounced; compare the analogous rhymes (oo, oou), p. 961, and the assonances, p. 955. But we should probably be more justified in following the example of Smith and Hart, who wrote (H) or (H'), p. 210, than that of Gill, who identified the sound with the Greek x

who is more than once alluded to by name, was never a proprietor in either theatre. His sole interest in them consisted in a participation, as an actor, in the receipts of 'what is called the house.' And in the *Athenæum* of 24 Sept., 1870, p. 398, col. 1, he explains that "this does not mean what is now implied by the ordinary expression of an actor sharing in the receipts of the

house. In Shakspeare's time, the proprietors took absolutely the entire receipts of certain portions of the theatre. 'The house' was, therefore, some other part or parts of the theatre, the receipts of which were divided amongst Shakspeare and other actors, and in which a proprietor had no share, unless, of course, he was an actor as well as a proprietor."

=(kh), *ibid.* Hence (h) will be adopted in the examples.¹ See also *suprà* p. 477, and note 1.

The S was apparently often (z) under the same circumstances as at present. T, S, were also often (s) where they are now so pronounced in French. The numerous examples of "resolutions," pp. 947-950, must be held to prove conclusively that in these cases the modern (sh) sound was unknown or at least unrecognized. See the remarks on *fashion*, p. 949, col. 2, last entry, and p. 955, and on *resolution*, *imagination*, p. 953.²

Initial K, G, in *kn*, *gn*, was certainly pronounced, and initial WR was probably (rw), but may have been (w'r). There is, however, no internal authority for this conclusion, but on the other hand no puns such as: *knave nave*, *write rite*, against it.³

VOWELS present greater difficulties, and must be considered more in detail.

A was certainly either (aa, a) or (aah, ah). It could not have passed into (ææ, æ), and still less into (ee, æ). The puns with A, p. 923, and the rhymes on A, p. 955, independently of external testimony, can leave no reasonable doubt on this point.⁴

AI, AY, present much ground for hesitation. They must now be distinguished from *ei*, *ey*, with which Salesbury confounds them, while Smith makes the difference slight. After Gill's denunciation of Hart's pronunciation of *ai*, *ay*, as (ee), p. 122, we cannot admit that sound as general in Shakspeare's time, notwithstanding the presumption in favour of Sir Philip Sidney's use of (ee), p. 872, and the obscurity of Mulcaster, p. 912. Wallis and Wilkins, who are both later, and both apparently said (æi), confirm this opinion. We see by puns that the pronunciation (ee) was well known to Shakspeare, but we cannot fix it in more than two or three cases. The remarks on p. 924 justify the retention of (ai) for general purposes, that is, the acceptance of Gill's practice.⁵ See also *suprà* p. 474, note, col. 2.

¹ Messrs. Noyes and Peirce (*suprà* p. 917, n. 1) say, "The sound of this guttural must have been atonic and faint, for Baret, Smith and Jonson make it equivalent to *h*. . . Its sound must have been disappearing in Shakspeare's time, for in 1653 it was a provincialism (Wallis, p. 31). . . It is probable that *f* was frequently substituted for *gh*." See *suprà* pp. 963, 967.

² Messrs. Noyes and Peirce "conclude,—1st that *-tion*, *-sion*, are dissyllabic, but could be contracted to one syllable; and, 2nd, that they had nearly, if not quite, the modern French sound."—See Gill's remarks on synæresis, *suprà* p. 937, and n. 3.

³ Messrs. Noyes and Peirce say "*k* before *n*, and *w* before *h*, would seem to have been invariably sounded."

⁴ The short *a* is considered to have been (æ) by Messrs. Noyes and Peirce, who, relying principally on Wallis, say that "in this case, it is a defect in Gill's system, that it does not distinguish between the *a* in 'cat,' and that in 'cart.'" But as regards *a* long, they consider it had "a sound nearly like *ale*," and then stating that this *a*, "*aa* now sounded, ends with a very short *i* sound," conclude that this was not the case then, and seem, on the authority of Wallis, to make it (ææ). The case of long *a*=(*aa*) they consider under AU, see the next note but one.

⁵ Messrs. Noyes and Peirce conclude that "*ai* was a true diphthong, more resembling our *a* long than our *i* long," meaning probably (æei), which would not be quite the same as our *a* long, which they consider to be (esi).

AU, AW, ought to be (au) if *ai*=(ai). But the usage of language is independent of such analogies, and changes may be complete in one case, but not in the other. Hart finds no difficulty in pairing (ec, au), and Gill, though he wrote (au), apparently meant (AA), p. 145. But he evidently hesitated at times between (au) or (AU) and (AA), for he says, referring to "HALL Henriculus, HALE trahere, et HALL aula," that "exilius est *a* in duabus vocibus prioribus, in tertiâ *ferè* est diphthongus." Compare a similar expression respecting the undoubtedly diphthongal long *i*, *suprà* p. 114, l. 10 from bottom. The (au, au, AU) have the true archaic stage twang, and each of them may be occasionally heard, at least before (l), from modern declaimers. Still as I have felt constrained to accept (AA) as the most probable representative of Dr. Gill's use, and as Ben Jonson, the friend and contemporary of Shakspeare, seems to have had no notion of any diphthongal sound (*suprà* p. 146), I have adopted (AA) in Shakspeare. There is at least one rhyme, *la! flaw*, p. 957, which favours this supposition, though it would be quite inadequate to establish it. Puns give no results, p. 923.¹

E, followed the rule of (ec, ii, e) given *suprà* pp. 225, 227. There was, however, occasionally a tendency to mince it into (i) when short, compare the puns: *clept clipt, civil Seville*, p. 925, and the rhymes p. 958. This mincing became very prevalent in the xvii th and xviii th centuries, but is inadmissible as an acknowledged pronunciation in stately verse.²

¹ Messrs. Noyes and Peirce, after a long investigation, say: "We must endeavour to explain our facts on the presumption that its sound [that of *au*] underwent no change. Now this can only be done by supposing that the French *a*, from 1620 to 1690, represented such a sound as might at once be described as 'daunt' and be made equivalent to 'dawn.' Such a sound is, perhaps, given to 'balm' in Georgia and Alabama." By *daunt*, *dawn*, I suppose these writers mean (aa, AA); by the last-mentioned sound of *balm*, they possibly mean (aa). They proceed thus: "Soon after 1690 it took another step in the same direction as that which was taken after the wars of the Huguenots, perhaps, and now bore no resemblance to the *a* in *father*. It appears, however, that this change had not struck completely into the provinces; for, as the Revolution gradually passed off, this orthoëpy also died out, and left the pronunciation as it was during the reign of Francis I. If we accept this theory, our conclusion respecting the English *aw* will be that it was always pronounced as at present," that is (AA). They incidentally

call the pronunciation of *dance* as (dæns), which is thought refined by many English speakers, "a prevalent vulgarism" in America. On the sound of French *a*, see *suprà* p. 820, and on the English conception of the sound so late as the end of the xviii th century, see Sir William Jones's English spelling of French, *suprà* p. 835. At present there is a great tendency in French to make the sound very thin. The use of (aa) is disliked, and the short sound has dwindled from (a) to (ah), on its road, apparently, to (æ), precisely as in older English. See Tito Pagliardini's *Essays on the Analogy of Language*, 1864, p. 6.

² Messrs. Noyes and Peirce say that *e* short "has undergone no perceptible change." And of the sound of *e* long, as in *Eve*, *deer*, they say: "There can be no doubt that this sound was heard in almost all the words where it now occurs, including 'people' and 'shire' in combination, for Gill gives to all these words the long sound of the short *i*. The principal exceptions were words in *ea*, several in *ei*, *Cæsar*, *cedar*, *equal*, *fierce*, *Grecian*, *interfere*, *these*, etc., which had the peculiar sound of *ea*," explained in the next note.

EA was mostly long (ee) and occasionally short (e). We must here accept the external testimonies, which are clear and distinct. The rhymes, p. 957, are singularly inconclusive as respects the length of the vowel. The rhymes of *ea* with *ee*, pp. 957-8, are all clearly false. A few words had the sound of (ii), p. 81. The vocabulary must be consulted for the authorities. All such usages were clearly orthographical mistakes or disputes, the appropriation of *ea* to long (ee) at the close of the xvth century not having been universally recognized. In *heart*, *heard*, the sound of (a) prevailed, see the puns p. 925, but see also the rhymes p. 964, col. 1, and p. 965, col. 2. For the interchange of the sounds (iir, eer) in the terminations *-ear*, *-ere*, see the rhymes p. 964, col. 2. In these cases there is no choice but to follow external authorities.¹

EE must be regarded as always intentionally (ii).²

EI, EY, ought to have followed the fortunes of *ai*, *ay*, with which we have seen they were once interchangeable. Gill is not consistent. He marks *prey* as (prai), *suprà* p. 900, but in *they* he uses (ei, eei), and in *receive*, *conceive* simple (ee). The rule that where *ei* is now (ii) it was then (ee), and where it is now (ee, eei) it was then (eei), will not be far wrong. Neither rhymes nor puns help us here. Hart's ordinary orthography, as shewn by his own MS., *suprà* p. 794, note, proves that *ei* was to him identical with (ee).³

EO had become (ii) in *people*, and perhaps in *yeoman*, of which the modern sound (*joo'man*) is clearly erroneous. We find *leopard* trissyllabic, H^o 1, 5, 5 (475, 31), *suprà* p. 947. The combination is very rare, and there is nothing to be gleaned from rhymes or puns.

EU, EW, if we believe external testimony, were clearly (eu) or (yy), and this view will be adopted. See the observations on the rhymes which apparently militate against this conclusion, p. 962.⁴

I, Y, long will be assumed as (ei). Smith and Shakspeare identify *I*, *eye*, *aye*, pp. 112, 926, 963. For Gill's sound Wallis's (ei) has been adopted, but the more indeterminate (ei) has been retained in Shakspeare. The short I was of course (i). But rhymes present difficulties. We have a few cases of long I and short I rhyming in closed syllables, pp. 958-9, some of which must be esteemed false, but in

¹ Messrs. Noyes and Peirce say that "Mr. Marsh, looking at the grammars, at once discovered that it [the sound of *ea*] was neither the one [long *a*] nor the other [double *ee*], but an intermediate sound, like *e* in *met* prolonged. [This gives (ee) exactly.] . . . When *ea* is found rhymed with *ai*, it is owing to a common mispronunciation of the latter diphthong noticed by Gill." Shakspeare's rhymes of *ea* with *ai*, are so rare as to be quite valueless, coming under the category of consciously imperfect rhymes, *suprà* p. 956. Even Sidney's, were not frequent, p. 872.

² Messrs. Noyes and Peirce do not

treat this combination independently of long *e*.

³ Messrs. Noyes and Peirce say, "the *ei* in *receive*, *deceive*, etc., was a diphthong in Gill's time,"—these two words are, however, exceptionally pronounced with monophthongal (ee) by Gill,—"it was used interchangeably with *ai*, as both Smith and Mulcaster observe." See *suprà* p. 120 for Smith, and p. 912 for Mulcaster.

⁴ Messrs. Noyes and Peirce say that "*eu* differed from *u* in 'use' apparently in beginning with the vowel 'end' instead of the consonant *y*." See below p. 980, n. 2.

others there may have been a variety of pronunciation. The termination *-ind* seems to have been generally (eind), corresponding to the modern pronunciation. The final *-Y*, however, offers the same varieties of rhyme as in Spenser, p. 869, and in modern verse, p. 861. There are occasional rhymes with (-ii), p. 959, col. 2, but many more numerous examples of rhymes with (-ei), p. 959, col. 1, without any reference to the origin from French *-é*, *-ie*, or Anglo-saxon *-ig*. As Gill constantly adopts the pronunciation (-ei) in such cases, I shall follow his lead. Compare the puns on *noddy*, *marry*, p. 926.¹

IE, when not final, was probably (ii), according to the external authorities. When medial, it was still a rare form, and had not regularly replaced *ee*, p. 104; *friend*, *fiend*, were probably (frend, fend), see the rhymes, p. 958. When final, it was generally (ei) accented, and (i) unaccented, see Mulcaster's remarks, *suprà* p. 913, col. 2.

O long and short must be generally assumed as (oo, o), compare the rhymes, pp. 959, 960, and the puns, p. 925. Before *l*, long *o* becomes (oou), according to Gill. Shaksperc in his rhymes disregards the difference (oo, oou), p. 960. We must, therefore, follow external authorities. Long O was also occasionally (uu), compare the puns,

¹ Messrs. Noyes and Peirce say of *i* in *in*, that "words to which we now give this sound had in general the same pronunciation in Shakespeare's day." On the long *i*, they first remark on the gliding characteristic of diphthongs, referring to Mr. J. Jennison in Hillard's Reader: "None of our diphthongs are combinations of two vowels, but run from the first sound to the last through an infinite number of gradations. 'Ice,' according to this view, instead of being *ah-ee*, is more nearly *ah, ap, err, end, in, eve*," that is, instead of (ai), is more nearly (aææri). "But it is not to be supposed that any abrupt change was made from the Saxon *i* long to this very complex combination. It is more rational to suppose that the sound grew up by insensible gradations somewhat in this manner," translating the symbols, they become (1. i, 2. ii, 3. eii, 4. æei, 5. aæei, 6. aææri). Then quoting Palsgrave as *suprà* p. 109, 110, they say: "The unmistakable drift of these citations is to the effect that 'ice' was pronounced like *i* in 'wind,' or perhaps 'end-in-eve,'" that is, as (i)? or (ei)? Further on they say, "the Palsgravian pronunciation of 'ice' in words where the *i* is now sounded long, appears to have been confined with Mulcaster to a few words ending in *nd*. 'Wind, frind, bind,' he laconically re-

marks, 'and with the qualifying *e*, kinde, finde,' etc. (Elementarie, p. 133). [*Suprà* p. 913.] So Coote, who, however, like Gill, preferred the longer pronunciation in all words of this class, not excepting 'wind.' 'And some pronounce these words *blind, find, behind*, short: others *blinde, finde, behinde*, with *e* long.' (Coote, p. 19)." They adopt (w) as Gill's *j* or long *i*. These conclusions are not sensibly different from mine. In this relation, the following observation of Ben Jonson, alluded to by Messrs. Noyes and Peirce, shewing apparently that he recognized both sounds (mæs mees; lais lees), is noteworthy: "Many words ending in *Diphthongs*, or *Vowells*, take neither *z*. nor *s*. [in the plural,] but only change their *Diphthongs* or *Vowells*, retaining their last *Consonant*: as *Mouse. Mice*, or *Mece. Louse. Lyce*, or *Leece. Goose, Geece. Foot, Fect. Tooth. Teeth*." B. Jonson, *Gram.* Chap. XIII. But from the same writer conjugating "Pr. *Lye*. Pa. *lay*. Par. pa. *lyne* or *layne*," we cannot conclude that *layne* was pronounced by any one like *lyne*, but that *lyne* was a form which he preferred, as one may see from his conjugating: "Pr. *Fly*. Pa. *flew*. Par. pa. *flyne* or *flowne*," where *flyne* could never have been the pronunciation of *flowne*. B. Jonson, *Gram.* Chap. XIX.

p. 925, and the rhymes in *-ove*, and of long *o* with *oo*, both on p. 961. On the other hand, short *o* often rhymed with (*u*), and was frequently so pronounced (compare the puns, p. 926), though some of the rhymes, especially those in *-ong* (p. 962), are undoubtedly false.¹

OA seems to have been regularly (*oo*).

OE is only (*oo*).

OI, OY will be taken as (*oi*) or (*uii*), according to Dr. Gill's usage. When there is no immediate authority, the pronunciation (*ui*) or (*oi*) in the xviith or xviiith century, may be held to imply a xvith century (*ui*) or (*uii*), *suprà* p. 134, l. 1, and p. 473, note, col. 2, and *infra* p. 992, note 2, and p. 995, note 3. The rhymes, p. 963, are not at all conclusive, but seem to indicate an unsettled pronunciation.²

OO was regularly (*uu*), but there are a few rhymes with long *u*, see p. 963.

OU, OW, had of course the two sounds (*ou*, *oou*), but Shakspeare quite disregarded the difference between these two diphthongs in rhyme, p. 961, and also the difference between (*oo*, *oou*), p. 960. In a few instances he has even rhymed (*oo*, *ou*), p. 961. It would of course be wrong to conclude from these rhymes that he did not differentiate the sounds (*oo*, *ou*), which have been so carefully distinguished in speech down to the present day; and even, though (*oo*) and (*ou*) are now beginning to coincide, in an unrecognized pronunciation of long *o*, the cases of (*oo*, *ou*) are kept apart as (*oou*, *ou*) or (*ou*, *au*). Hence I shall here follow my external authorities.³

¹ Messrs. Noyes and Peirce do not seem to be acquainted with the common English provincial and Scotch sounds (*oo*, *o*), although they know (*oo*, *o*), the short (*o*) being the "Yankee pronunciation of 'whole' and 'coat'." Finding that in Wallis the pronunciation of short *o* was (*Λ*) or nearly (*o*), they leave the point in doubt whether Gill may not really have paired (*oo*, *Λ*) in error, and have meant those sounds by his *ö*, *o*. The long *o* they take without any aftersound or "vanish," that is, as (*oo*) not (*oou*). But the diphthongal *o* before *l*, and *ou*, *ow*, which are now professedly (*oo*), they assume "must have been the same with which the Irish now pronounce the word *bold*." I have not had an opportunity of strictly analyzing the Irish sound, but it appears to me to be rather (*ou*), or (*ou*), with a short first element, than (*oou*), or (*oou*), with a long first element. It is probably the same sound as orthoepists in the xviiith century analyzed as (*au*, *ou*), *suprà* p. 160. But if so, it is more nearly the closed sound of *ou* than the open sound, that is, nearer (*ou*) than (*oou*). Messrs.

Noyes and Peirce do not seem to notice the (*uu*, *u*) sounds of *o*.

² Messrs. Noyes and Peirce recognize the double sound of *oi*, and quote the passage from *Mulcaster*, *suprà* p. 915.

³ These distinctions are recognized by Messrs. Noyes and Peirce, who, however, infer from the passages quoted from *Mulcaster*, *suprà* p. 914, that he agreed with Bullokar and Palsgrave in pronouncing *ou* as (*uu*), where most writers gave (*ou*), just as when *i* preceded *nd* he at least occasionally pronounced (*i*), and not (*ei*, *ai*), *suprà* p. 913. They also imagine that Shakspeare may have occasionally played on the pronunciation of *fowl* as *fool*. Mr. Noyes, in a private letter, thinks that the reading *foule* found in three quartos in H⁴ 4, 2, 7 (402, 21), which is *foole* or *fool* in all the other authorities, arose from this source, and that *fool* is the better reading. The words would then thus run: "such as fear the report of a caliver worse than a struck fool or a hurt wild duck," where this sound would create an obvious pun. But we have no examples of indisputable puns of this sort.

U long must be taken on external authority as (yy). See remarks on the pun *you, u*, p. 926, and on the rhymes, p. 962. There is of course just the chance of an (iu) pronunciation, which we know existed, not only from Holyband's express assertion (suprà p. 228, note, col. 1, and p. 838), but from the impossibility of otherwise accounting for Wilkins's ignorance of (yy), p. 176. Still the testimony of Gill and Wallis is so distinct that we should not be justified in assuming any but (yy) to be the received pronunciation.¹ But U short was either (u) or (u). The puns or allusions *moody, muddy*, p. 926, strongly confirm this. None of the rhymes, p. 962, are convincing.²

UI receives no light from the rhyme *voice juice*, even when supplemented by Hodges's confusion noted on p. 963, col. 1, and the conclusions of p. 136 will be adopted.

¹ The possibility of Wallis's (yy) and Wilkins's (iu) coexisting, without either noticing the difference of pronunciation in the other, though both were in frequent communication, is established by the following fact. In Norfolk *two, do*, are constantly called (tyy, dyy), as I know from personal experience, and much concurrent information. The gentleman who supplied Prince Louis Lucien Bonaparte with a specimen of the dialect, repudiated this sound, and only allowed the existence of (tiu, diu'), sounds of which I am ignorant. But I have noticed a confusion between (yy, œ) here as elsewhere. Again, it is generally asserted that in Devonshire they call *moon* (myyn); but Dr. Weymouth, a Devonshire man, denies the fact, and his pronunciation is (mæən), as nearly as I could judge. The sounds (œ, yy) are constantly confused. See remarks on the Devonshire pronunciation of *oo*, suprà p. 636, note. Kenrick, in his Dictionary, 1773, p. 39, identifies a quickly spoken *u* with the French sound. Even as late as 1775, Joshua Steele heard French *u* or (yy) in *superfluous, tune, supreme, credulity*, though he states it to be "very rare in English," and "seldom or never sounded . . . except in the more refined tone of the court, where it begins to obtain in a few words." *Prosodia Rationalis*, pp. x. and xii. See below Chap. X. I heard (yy) pronounced in *purify* in 1870, from the pulpit. Attention should also be paid to an extremely difficult provincial diphthong, common in the Peak of Derbyshire, Westmoreland, and Cum-

berland, and probably in many parts of the north of England, which replaces long *u*. At first a Southerner takes it for (iu), then he is apt to consider it simply (yy) or (œ) or (uu), according to his familiarity with these sounds. I have not yet been able to analyze it satisfactorily, but it appears to me to partake of such characters as (yu, yu, uu). The first element of diphthongs is notoriously difficult to seize, even when the diphthongs are extremely familiar (suprà p. 108), and hence the uncertainty of this sound, which may perhaps be provisionally received as (yu). Yet Mr. Thomas Hallam (suprà p. 473, n. 1, col. 2), from whose pronunciation I endeavoured to analyze the sound, himself analyzed it as (u), which did not satisfy my ear, although the corresponding diphthong (ii) for (iu) seemed, after much observation, sufficiently established. It is possibly to some such intermediate diphthong that all the confusion between (yy) and (iu) is to be traced.

² Messrs. Noyes and Peirce say: "the pronunciation of 'use' is described with some unanimity as that of the French *u*, as indeed it may well have been once; but that certainly was not its sound in Shakespeare's day, for Baret describes it in terms of more than ordinary clearness as being a diphthong compounded of *e* and *u*." But see the passage quoted and remarks on it, suprà p. 168. The short *u* Messrs. Noyes and Peirce fully recognize as (u) or (u), which of course they do not distinguish.

These considerations give the following results:—

A=(aa a).	-Y final, generally=(ei).
AI=(ai), and rarely=(ee).	IE medial=(ii), final=(ei) or (i).
AU=(AA).	O long, generally=(oo), occasionally=(uu).
E long=(ee), rarely=(ii).	O short generally=(o), occasionally=(u) or (u).
E short=(e).	OA=(oo).
EA generally=(ee), rarely=(ii), and more rarely=(a), occasionally=(e).	OE=(oo).
EE=(ii).	OI=(oi), but occasionally=(ui).
EI=(ei) or=(ee), rarely=(ai).	OO=(uu).
EO=(ii) or (ee).	OU=(ou, ou).
EU=(eu) or (yy).	U long=(yy).
I long=(ei).	U short=(u) or=(u).
I short=(i).	

Any deviations from these customs must have special external authority; and when any combination has two values, either the same authority must be sought, or its place supplied by analogy, derived from observing the direction of change in similar words (pp. 225-240). The usual variations in the orthography of the xvth and early part of the xvth century must of course be allowed for. We have no specimens of Shakspeare's own orthography except his own signature, and no reason to suppose that it would have been more systematic or regular than that of the other literary men of his time.¹

¹ For the printed orthography of Shakspeare's works, the remarks of Salesbury (supra p. 752 and note 3) should be borne in mind. We have seen that Sir John Cheke attempted a systematic orthography in MS. (supra p. 877, note). Mr. Francis Fry, F.S.A., author of an elaborate *Description of the Great Bible of 1539, &c., &c.*, and editor of a fac-simile reproduction of Tyndale's first edition of the New Testament, 1525 or 1526, and other works, has recently called special attention to a curious and very rare edition of Tyndale's New Testament, of which a mutilated copy will be found in the British Museum (press-mark C. 36. a, described in the Catalogue of Bibles, part 13, fo. 1384), and a nearly perfect copy at Cambridge, of which the second title (the first is wanting) runs thus, according to Mr. Fry: "THE NEWE TESTAMENT, dyligently corrected and compared with the Greke by WILLIAM TYNDALE: and fynneshed in the yere of oure Lorde God A.M.D. and .XXXV." While this sheet was passing through the press, I received Mr. Fry's printed alphabetical list of nearly 300 words in

this edition, whose orthography differs so materially from that used for the same words in the edition of 1534, that Anderson (according to Mr. Fry), in his *Annals of the English Bibles*, 1, 456, says, it is supposed to be Gloucestershire dialect, and that the Testament was intended by Tyndale (who was born in Gloucestershire, about 1477), for the ploughboys of that county, whom he said, about 1520, he would make to know the Scriptures better than the priests. On examining the list of words furnished by Mr. Fry, and comparing the spelling with the older pronunciations in the preceding Vocabulary (pp. 881-910), we find the following results, neglecting a few doubtful cases.

AE=(aa) in: aegge, baebes, braeke, caege, caeke, caese, chaest, desolaet, fuere, faese faece, faether, gaesinge, gaewe, graece, haest haestily, haet, haeth, haewe, haeven, laede, laeke, laeme, laetely, maede, maeke, maeking, naeked, naeme, parttaeker, placee, pluetes, raegge, raetted, raether, snefe, saeke, saeme, saeved, saeveour, scaepe, shaekc, shaeme, shaepe, spaee, spaekc, taekc, taeme, taest, awaekc, waere, waest, waested.

AEL=(aul) in: caelinge, faele, faelaly, shaell, taeked, waelke.

AE=(a) in: accompaenyngc, aengell, maed, maesters, paert, rewaerde, saete,

The pronunciation founded on these conclusions, and realized in the following examples, may at first hearing appear rude and provincial. But I have tried the effect of reading some of these passages

tacklynge, vryneyarde, waetch, wraeth (all probably errors).

AEY = (ai) in : abtaeyne, afraeyde, agraeyne, captaeyne, certaeyne, chaene (an error for *chaeyne*), clae, compleyners, consaeytes (possibly an error for *conscates*), contaeyned, daey, dekaey, faelye (an error for *faelye*), faeynt (also by error *facont*), faeyr, faeyth, fountaeyne, gaeye, haeye, laey, laeyde, laeye, maeyntayne, maeyste, marvaelye, mountaeyne, naye, obtaeyned, paeyed, paeyer, paeyne, paeynted, plaeyne, praeyed, praeyer, praeyse, raeigne (an error for *raeygne*), raeylinge, raeymnt, raeyme, raeysse, sae (an error for *sae*), saeyde, saeyinge, saeyled, saeynctes, straeyle, taeyles, trevaelye, unfaeined, vaele (an error for *vaeyle*), vitaeyles, waele (an error for *waeyle*), waeyght, waeyte.

AE = (ee) or (e) is probably an error for EA in : aete, concaevrd, decaevable, decaeve, hear (= *her*), naedeth, paerle, percaevae, swaerdes, ware (= *where*, an error for *wear*!), waepens.

EE, EA, present no peculiarities, but EAE = (ee) is used, perhaps by error, in : greact, and EY in agreement may be an error. IE, YE, are rarely, probably by error, = (ei) in : abyede, blend.

OE, sometimes alternating with OO, OA, = (oo) in : aboede, abroed, accoerde, almoest, aloene, aloone, aroese, cloeke, attoenment, boet, boethe, boothe, cloethe, coele, coete, cootes, doear (= *door* ?), hoeme, hooome, hoepe (*moane* is probably an error for *moene*, *moone*), noene, noane, oethe, poele, roebe, roese, smoete, soelyke, spoeken, stoene, stoone, thosee, thoosse, toekens, troede, whoem, whoom, wroete.

OEL = (ooul) in : behoelde, boeldely booldly, coelde, foere, hoeld.

OE, sometimes alternating with OU, = (uu, u) in : anoether, boeke, broekes, brother, doeth, doeying, foede, foelishness, foerth, foete, loeke, louke, moeche, moene, moerninge, moether, mouny, oether, roete, shoeld, shoes, stooble, stoede, stoele, toeke, touth, woeld (= *would*), woerd (*woere* = *where*, is probably an error).

OEEY = (uii, ui) in : anoeynte, apoeynted, and = (oi) in voeyce.

UE = (yy) in : crueses, ruele, ruelers, truethe.

Now the first inspection of such a list leads to the notion that a systematic spelling was attempted (failing of course occasionally), by which long *a, e, i, o, u* were to be expressed by *ae, ee, ie, oe, ue*, exactly in accordance with Mr. E. Jones's most recent attempt at improving English spelling (supra pp. 590-1 and notes), and hence that Tyndale's and Cheke's spellings should be placed in the same category. There could have been no attempt at exhibiting rustic pronunciation, because of the close agreement with the accepted literary pronunciation of the time. But an

inspection of the book itself leads to a very different conclusion. Had the author had any systematic orthography in view, it would certainly have predominated, and examples of the ordinary orthography would have appeared as misprints. But the book presents just the opposite appearance. The curious orthographies do not strike the eye on reading a page or two, except as occasional *errata*, and Mr. Fry's list is the result of a laborious search. The word *maester* is said to be nearly the only one which is used with tolerable uniformity, and this might have been used for *maister*, a common form (p. 996, n.). But the systematic character of the spelling, which is clear from the above arrangement, renders it impossible to consider these spellings as merely accidental errors of the press. That they are errors which had been only occasionally committed, and had probably been very frequently corrected in the first proofs, is palpable, but there must have been some special reason for the compositor's committing them. Now the book was most probably printed at Antwerp, and Tyndale was then a prisoner in Flanders. One of the compositors employed on this particular edition may have been a Fleming, with a good knowledge of English, but apt not seldom to adopt his own orthography in place of the English, to represent his own English pronunciation. This supposition would be sufficient to account for his frequently using the Flemish *ae, oe, oo, ue*, for (*aa, uu, oo, yy*). That he occasionally used *oe* for (*oo*), notwithstanding its Flemish use for (*uu*), may have been due to erroneous pronunciation, to which also must also be ascribed the use of *ae* for (*a*) and of *ael, oel*, for (*aul, ooul*). We must suppose that his errors were generally seen and corrected at press, but were not unfrequently overlooked, as they might be by the best press readers, and were sure to have been by such careless ones as those in the xviith century. This hypothesis seems sufficient to account for the phenomenon, though its establishment would require a more laborious examination of the printed text than it seems to be worth.

to many persons, including well-known elocutionists, and the general result has been an expression of satisfaction, shewing that the poetry was not burlesqued or in any way impaired by this change, but, on the contrary, seemed to gain in power and impressiveness. Yet, though every real lover of Shakspeare will be glad to know how the grand words may have sounded to Shakspeare's audience, how he himself may have conceived their music, how he himself may have meant them to be uttered and win their way to the hearts of his audience, it is, of course, not to be thought of that Shakspeare's plays should now be publicly read or performed in this pronunciation. The language of the xvth century stands in this respect on a totally different footing from that of the xivth. Chaucer's verse and rhyme are quite unintelligible, if he is read with our modern pronunciation.¹ Hence the various "translations" or rather "transformations" of Chaucer perpetrated by Dryden, Pope, Lipscombe, Boyce, Ogle, Betterton, Cobb, etc., and more recent attempts at a "transfusion of Chaucer into modern English," in which the words of the original are preserved so far as the exigencies of rhyme and metre, according to xixth century notions, permit.² But even then the effect of the new patches on old garments is painfully

The one point of importance to the present investigation is that the orthographies were not due to Tyndale's, or any English system. As due to a Fleming's involuntary system, they would, so far as they go, confirm contemporary English authorities, and hence are so far useful to us.

¹ Mr. Payne, in his paper on "The Norman Element in the Spoken and Written English of the xii th, xiii th, and xiv th Centuries, and in our Provincial Dialects," just published in the Transactions of the Philological Society, has many criticisms on the theories of pronunciation here adopted, which have been partly noted, *suprà* pp. 581-588, and will have to be further considered in Chap. XII.; but as he has given a specimen of the pronunciation of Chaucer which results from his researches, it is convenient to reproduce it here, without comment, for comparison with that on p. 681, and Rapp's on p. 676. The original is also in palaeotype. Mr. Payne has obligingly revised and corrected the proof of this copy.

² The Poems of Geoffrey Chaucer modernized, London (Whitaker), 1841, 8vo. pp. cxlvii, 331.—The modernizers are various. The Prologue, Reve's and Franklin's Tales by R. H. Horne, the Cuckoo and Nightingale and part of Troilus and Cresida by Wm. Wordsworth, Complaint of Mars and Venus by Rob. Bell, Queen Annelida and the false Arcite by Elizabeth B. Barrett, the Manciple's, Friar's, and Squire's Tales by Leigh Hunt, etc.

The initial lines of the Prologue are thus rendered by Mr. R. H. Horne, the italicized words being introduced for the sake of "modernization," see the revised text, *suprà* p. 680.

apparent. The best of them breathe a modern spirit into the dead giant, and by a crucial instance shew the vanity of attempting to represent the thoughts of one age in the language of another.

Shakspeare's metre only rarely halts in our present utterance,—although it does halt occasionally from not attending to “resolutions” (see remarks on *banished*, *suprà* p. 948, col. 1),—and his rhymes are so far from being perfect, as we have seen, that the slightly greater degree of imperfection introduced by modern utterance is not felt. His language, although archaic enough in structure to render the attempts of imitators ludicrous, is yet so familiar to us from the constant habit of reading his plays, and the contemporary authorized version of the Bible, that it does not require a special study or a special method of reading, by which silent letters are resuscitated. As essentially our household poet, Shakspeare will, and must, in each age of the English language, be read and spoken in the current pronunciation of the time, and any marked departure from it (except occasional and familiar “resolutions,” sounding the final *-ed*, and shifting the position of the accent, which are accepted archaisms consecrated by usage,) would withdraw the attention of a mixed audience or of the habitual reader from the thought to the word,

And palmers for to *wander thro'* strange
strands,
To sing the holy mass in sundry lands;
And *more* especially, from *each* shire's end
Of England, they to Canterbury wend,
The holy blissful martyr for to seek,
Who hath *upheld* them when that they were
weak.

Mr. Horne's introduction gives an account, with specimens, of former paraphrases, and an “examination of the versification and rhythm adopted by Chaucer,” (pp. xxxvii-xci) written by a man who has evidently a fine sense of rhythm and a sacred horror of mere scansionists. It is well worth perusal, as antidotal to Mr. Abbott's theories, *suprà* pp. 940, 944. Thus on Prologue v. 184-5 (*suprà* p. 690) he remarks: “The words ‘study and’ are thus to be pronounced as two syllables instead of three; and the four syllables of ‘cloister alway’ are to be given in the time of three syllables. Yet, be it again observed, this contraction is not to be harshly given; but all the words of what we may term the *appoggiatura* [a most happy expression, giving to a musician the whole theory of the usage,] fairly and clearly enunciated, though in a more rapid manner. One of the best general rules for reading such passages, especially when of such vigour as the foregoing, is to read with an unhesitating and thorough-going purpose, to the utter defiance of old metrical misgivings, and that thrumming of fingers’ ls, which is utterly de-

structive of all harmonies not comprised in the common chord. This rational boldness will furnish the best key to the impulse which directed the poet in writing such lines,” p. lxxxiii.

The following examples of trissyllabic measures in modern heroic verse are borrowed from this introduction, such measures being italicized.

would cross old associations, would jar upon cherished memories, and would be therefore generally unacceptable. Hence all recent editions of the English Bible of 1611 and of Shakspeare's Plays and Poems (when not avowedly facsimiles), adopt the current orthography of the time, into which has slipped the change of *whan*, *than*, *then* into *when*, *then*, *than*. A similar attempt has been recently made with Chaucer,¹ but it is not so easy, many of the words having no modern spelling (suprà p. 403, note), and the necessity for adding on and sounding final *e*'s, and shifting the place of the accent, for no apparent purpose but to make the lines scan, has a trailily weakening effect, which maligns the fine old rhythms.

¹ The Riches of Chaucer; in which his Impurities have been Expunged, his Spelling Modernized, his Rhythm Accentuated, and his Terms Explained. Also have been added Explanatory Notes and a New Memoir of the Poet. By Charles Cowden Clarke, crown 8vo., pp. xvi, 625, London (Lockwood), 2nd edition, 1870. The difficulty arising from words having no modern form is evaded by retaining the old form, and giving an explanation in footnotes. The spelling is occasionally not modernized at all. The Prologue commences thus :
Whenné that April, with his showrés sote,¹
The drouth of March hath piercéd to the rote,²
And bathéd every vein in such licour,
Of which virtúe engendred is the flow'r;
When Zephirus eke, with his soté³ breath
Inspired hath in every holt⁴ and heath
The tender croppés : and the youngé sun
Hath in the Ram his half course yrun,
And smallé fowls maken melody,
That sleepen allé night with open eye,
So pricketh them natúre in their courages,⁴
Then longen folk to go on pilgrimages,
And palmers for to seeken strangé strands,
To servé hallowés⁵ couth⁶ in sundry lands;
And 'specially from every shiré's end
Of Engleland to Canterbury they wend,⁷
The holy blissful martyr for to seek
That them hath holpen when that they were sick.

¹ Sote—sweet. ² Rote—root. ³ Holt—grove, forest. ⁴ Courages—hearts, spirits.
⁵ Hallowés—holiness. ⁶ Couth—known.
⁷ Wend—go, make way.

As part of his justification for changing Chaucer's spelling (or rather that of the numerous scribes) into a modern form, Mr. Clarke says that Chaucer "would even, upon occasion, give a different termination to them [his words], to make them rhyme to the ear in the first instance. An example of this, among others, occurs in the *Clerk's Tale*, line 1039" of his version, Tyrwhitt's and Wright's editions, v. 8915, "where the personal pronoun *me* is altered into *mo*, that it may rhyme with *also*," p. v. This charge is taken from

Tyrwhitt's note, and is absurd on the face of it, for those who have dabbled in rhyme know that the first word in a rhyme is generally chosen to rhyme with the second, and not conversely. In the present case the weak *also*, which is not in the Latin original, was evidently inserted for this reason. On reading the context, every one will see that Griseldis, though she meant herself, was careful not to name herself, and hence used *moo* = *more*, *many*, *others*, as an indefinite. The passage, as contained in the Univ. Camb. MS. Dd. 4 24, runs as follows, with Petrarch's Latin annexed, in which also an indefinite *alteram* is used, and not *me*, although there was no stress of rhyme.
O thyng byseke I þow | and warne also
That þe ne pryke | with no turmentynge
This tendre Mayde | as þe han don moo.

Latin—

Vnum bona fide precor ac moneo ne hanc illius
aculeis agites quibus alteram agitasti.

So much importance had to be attributed to Chaucer's rhymes in this work, that it was necessary to point out the error of Tyrwhitt and Clarke in this instance. The limits of Chaucer's habits of varying forms for the sake of rhyme are given, suprà p. 254.

The objections to modernizing the spelling do not apply to prose works, such as Sir Edward Strachey's *Globe* edition of "*Morte D'Arthur*," 1870, because there is no occasion to insert the final *e*, or change the position of the accent, and there is no rhyme to be murdered. It was also possible in this case to insert a more usual for a less usual word, without sacrificing the metre. This book is a favourable specimen of what can be done to modernize the appearance without modernizing the spirit of an old prose writer, and bring him into many hands which would have never taken up the original.

¹ Gill's pronunciation of *igh* as (*eikh*) is adopted, so far as the vowel is concerned, in place of Salesbury's (*ikh*), on account of the rhymes *light bite*, *right spite*, *might spite*, etc., *supra* p. 963. For the same reason, the (*kh*) has been reduced to (*h*), *supra* p. 975.

(*ei*), p. 959.

⁶ Cheke and all modern orthoepists write a long vowel in the second syllable. Bullokar's short vowel is probably due to a mistaken etymology. The word is not *ags.*, (*supra* p. 394.). Orrmin always writes it with a long vowel, -*fore*, and *ferr* with a short vowel. Mätzner, *Eng. Gram.*, 23, 370, quotes it frequently in the divided form, *per foren*, meaning evidently, *that being before*, i.e. *in consequence of that*. The old *forpi* split up into the two modern forms *because*, and *therefore*.

⁷ This is conjectural. Smith apparently said (Dzhyyz), but there is unfortunately a misprint in his book where the word is cited.

¹ For this word there is no external authority; I have adopted (eemz) for the reasons on p. 451, note, col. 2, l. 18.

² The contraction is harsh, but the full pronunciation would be harsher,

and the position of the accent seems established by: Forsooth an inventory, thus importing H^o 3, 2, 49 (609, 124); would testify, to enrich mine inventory Cy 2, 2, 6 (952, 30).

2. First Plai'er.

Ei war'aant juur on'ur.

3. Ham'let.

Bii not tuu taam neeidh'er; but let juur ooun diskres'iun bii juur tyy'tur. Syt dhe ak'siun tu dhe wurd, dhe wurd tu dhe ak'siun, with dhis spes'i'al obzer'vaans, dhat juu oorstep not dhe mod'estei of naatyyr. For an'i thi'q soo overdun iz from dhe purpus of plai'iq, whuu end booth at dhe first and nou, waz and iz, tu hoould az tweer dhe mir'ur up tu naatyyr; tu shoou ver'tyy her ooun feetyr, skorn her ooun im'aadz, and dhe ver'i aadz and bod'i of dhe teim, hiz form and pres'yyr. Nou, dhis overdun, or kum tar'di' of, dhooun it maak dhe unsk'l'ful laan kan'ot but maak dhe dzhydis'i'us griiv, dhe sen'syyr of whitsh oon, must in juur alou'ans oorwain a hool thee'ater³ of udh'erz. Oo, dheer bii plai'erz dhat ei haav siin plai, and hard udh'erz prai, and dhat hein'lei,—not tu speek it profaan'lei—dhat neeidh'er haav'iq dhe ak'sent of krist'ianz, nor dhe gaat of krist'ian, paa'gan, or Norman,⁴ haav soo strut'ed and bel'ooud, dhat ei haav thooout sum of naatyyrz dzhur-neimen nad maad men, and not maad dhew wel, dheci im'itaated hyyman'iti soo abnom'inablei.⁵

¹ This is adopted, in place of the modern *periwig*, because the quartos generally read *perwig*, and Miège, 1688, gives the pronunciation (pær-wig), which shews that the *i* in the *periwig* of the quarto of 1676 was not pronounced. The first and second folios have *pery-wig*, the third and fourth have *perriwig*. The pronunciation (periig) given by Jones, 1700, seems, however, to be really still older, as compared with French *perruque*, and the orthography *peruke*. The order of evolution seems to have been (per-yyk, periig, per-wig, per'iwig, wig); compare modern *bus* from *omnibus*, and the older *drake*, Old Norse *andriki*, Mätzner, 1, 165; Stratmann, 158.

² Price seems to give (nøiz), *suprà* p. 134, a xviith century pronunciation confirmed by a xixth century vulgarism, and indicating a xvith century (nuiz), which is therefore adopted in the absence of direct authority (p. 979).

³ Notwithstanding the vulgar (thie'tu), which would imply an older

position of the accent, this place is settled by Shakspeare himself, see AY 2, 7, 30 (214', 137), KJ 2, 1, 83 (338, 374), R² 5, 2, 6 (377', 23).

⁴ All the folios read *or Norman*, but the quartos have *nor man*, which is adopted by the Cambridge editors. Both are manifestly erroneous. As Denmark in this play is at war with Norway, it is possible that Hamlet may have meant to put his enemies into the position of being neither Christian nor pagan, and that the right reading may have been *or Norwéyan*, a Shaksperian word, see M 1, 2, 5 (788', 31); 1, 2, 13 (789, 49); 1, 3, 35 (790, 95), and easily confused by a compositor with the better known word *Norman*, which however occurs in its usual sense in this same play, H 4, 7, 20 (839, 91).

⁵ On the insertion of the aspirate in this word, see *suprà* p. 220. There is evidently a play on *humanity* and the old false derivation *ab-homine*, so that *abominably* = *inhumanly*.

4. First Player.

Ei hoop wii haav reformd' dhat indifferentlei with us, sir.

¹ Constantly spelled *shrow* in the first folio, and compare the rhymes, p. 960, under *So*.

² This is Smith's pronunciation, the only authority I have found. It is a

legitimate form, from ags. *þowan*, comparable to (knoou), from ags. *cnawan*. The modern (thaa) implies an older (thaa, thau), which, however, is more strictly a northern form

8. Kurtis.

¹ Hanmer transposes *within* and *without*, but the result is not very intelligible. All will be clear if we suppose Grumio to have been struck by an unsavoury pun as soon as he uttered *Jacks fair*, thinking of *a jakes*, so notoriously *foul* 'within.' The similarity of pronunciation is gua-

ranteed by Sir John Harrington's "New Discourse on a stale subject, called the Metamorphosis of *Ajax*," meaning *a jakes*, 1596. The *Jacks* and *Gills* came pat, compare *The Babbes Book* of the Early English Text Society, p. 22, v. 90, "and iangylle nether with lak ne lylle," A.D. 1480.
